

CloudMan and VMIC projects overview

Wednesday 26 October 2011 08:30 (25 minutes)

CERN is developing a different set of tools to improve and agile the Cloud Computing infrastructure. Currently there are two active important projects: CloudMan is a project developed in collaboration with BARC institute and the VMIC project is developed in collaboration with ASGC. The CloudMan project consists in the development of an Enterprise Graphical Management tool for IT resources and the VMIC project is a software tool that is used to manage in a trustful way the virtual images provided by different sites.

This presentation will give an overview over this two projects and the current status, and will explain how they fit into the new Cloud Computing model at CERN.
