A nice picture of how the plots should be

- Histos published by PublisherQAshifter are empty or with strange plots
 - **"Average occupancy per module (Layer 5)"** and **"Average occupancy per module (Layer 6)"** are empty but they have non-zero entries
 - **"SSD Data Size"** should have only two peaks... but it has multiple peaks
- Histos published by PublisherQA are filled in a correct way

- 1) Problem related to an export DATE_RUN_NUMBER
 - Exporting DATE_RUN_NUMBER the plots are still empty
- 2) It seem that at least the two "Average occupancy per module" are not found.
 - A comparison between the Publisher classes does not show differences.
 - But if the plots are not found... how is it possible that we see entries in them?

- On which side is the problem now?
 - Further investigations are still needed by the DQM experts
 - Investigations can be performed also on the SSD side
 - Other debug sessions can be organized

- The 2 pending issues on the DQM blackboard are still there

- Tests performed by Melinda on the whole ITS
- For the SSD:
 - all the plots are correctly filled
