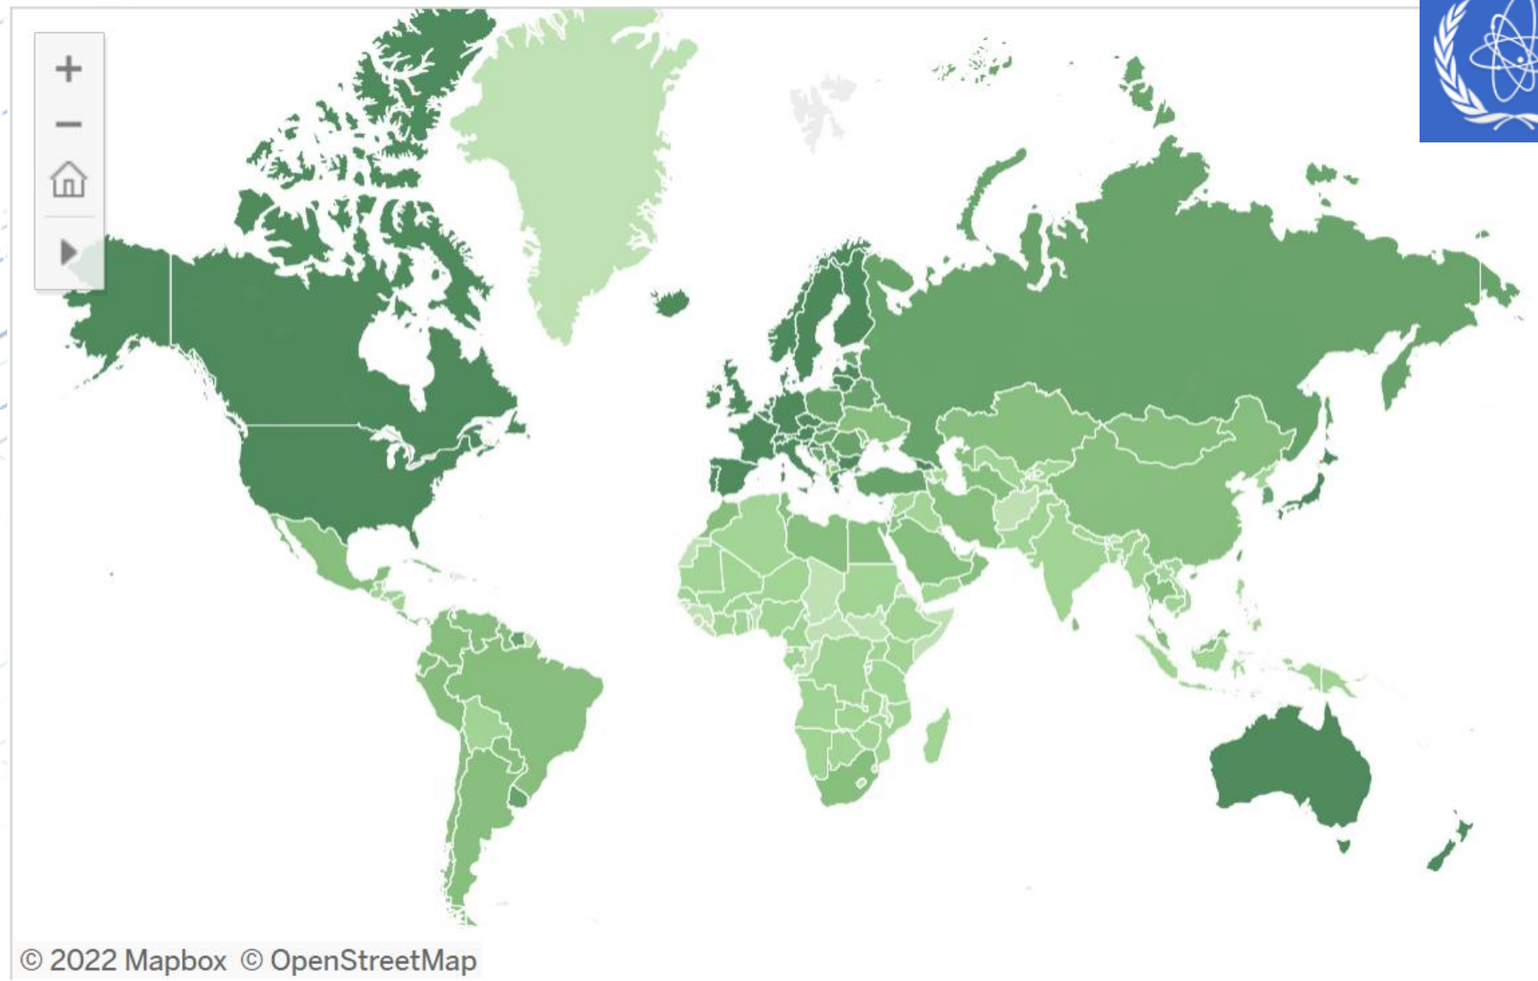
Radiotherapy Machines per Million People

(Updated on : 11/11/2022 9:31:12 AM)



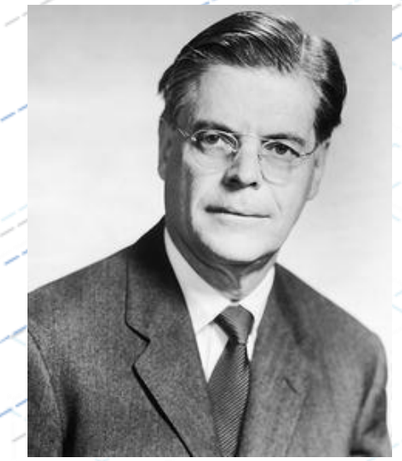
IAEA | DIRAC Directory of RAdiotherapy Centres

Country:	**Georgia**
Population:	**3,757,980**
Cancer cases:	**12,751**
Income group:	**Upper middle income (UM)**
Machines per 1 mill.:	**5 and more**
Radioteletherapy centers:	**8**
MV Therapy:	**19**
Light Ion Therapy:	**0**

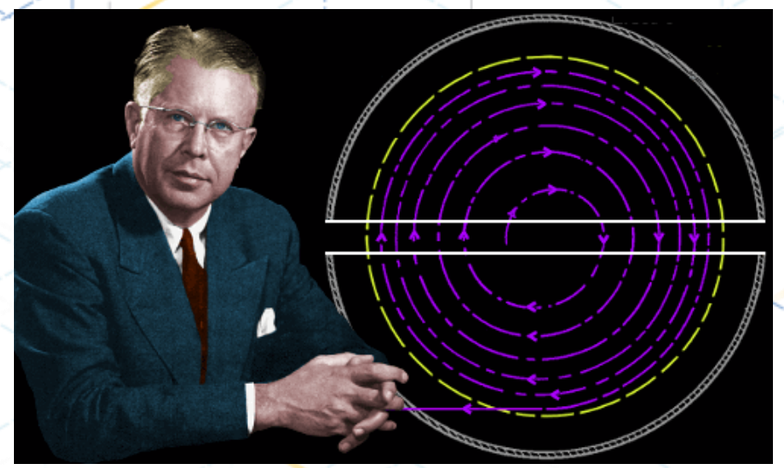
- 5 and more
- between 3 and 5
- between 1 and 3
- less than 1
- no reported machines

KUTAISI INTERNATIONAL UNIVERSITY

Radiological Use of Fast Protons



Robert R. Wilson
(1914-2000)



Ernest Lawrence (1901-1958)
The inventor of a cyclotron.
Nobel prize in physics 1939

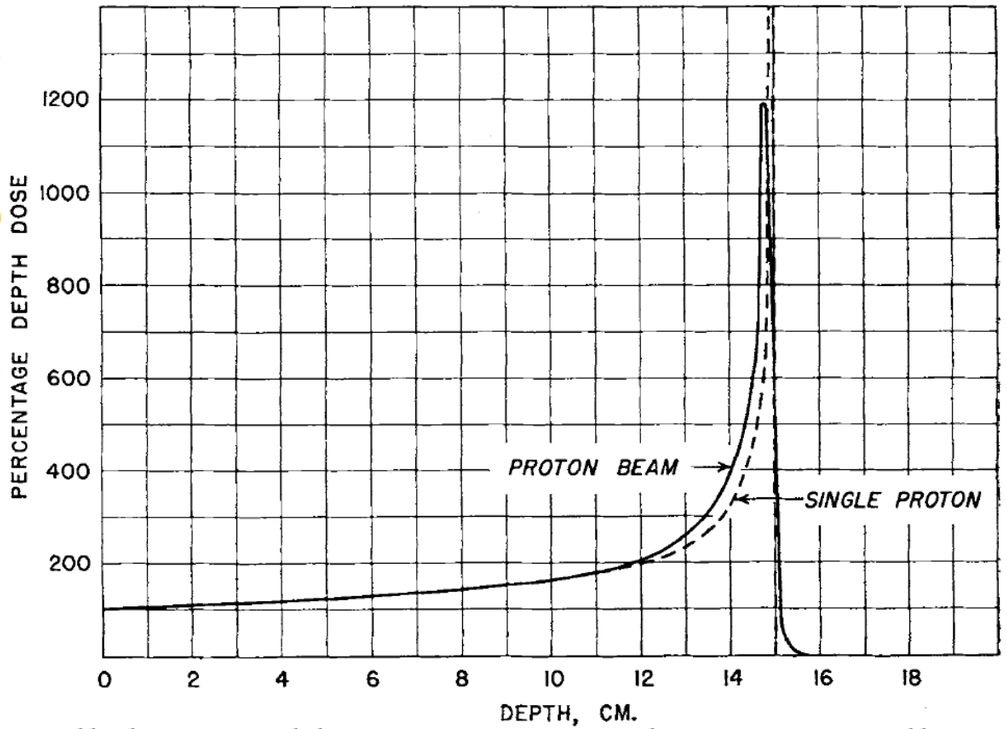
Radiology 47 (1946), 487

Radiological Use of Fast Protons

ROBERT R. WILSON

Research Laboratory of Physics, Harvard University

Cambridge, Massachusetts



"It will be possible to treat a volume as small as 1 cc anywhere in the Body and to give that volume several times the dose of any other neighboring tissue. The exact behavior of protons of the energy considered here will became known only when such protons are available for experiment."

KUTAISI INTERNATIONAL UNIVERSITY

PT in Hospital: Loma Linda University Medical Center (LLIMC)

1990: The first hospital-based proton facility in the world: Loma Linda University Medical Center (LLUMC)

1988: the ground was broken for the treatment facility

1989: the accelerator was commissioned at Fermilab

1990: the entire system was commissioned in the summer

1990: the first patient was treated in October

The LLUMC proton accelerator: a small synchrotron, with proton beams of 70-250 MeV energy, and i

Accelerators for the particle therapy

Two types of particle accelerators are used in the particle therapy: cyclotron and synchrotron

Cyclotron (IBA C230) in CCB(Poland)

Advantages: compact design, cost

Disadvantages: fixed particle type (proton), energy
Energy variation bt degrader

Synchrotron in CNAO (Italy), Developed at CERN
PIMMS (proton-ion medical machine study) project

Advantages: protons and heavy ions (He, C), Energy variation

Disadvantages: cost, complex device larger space

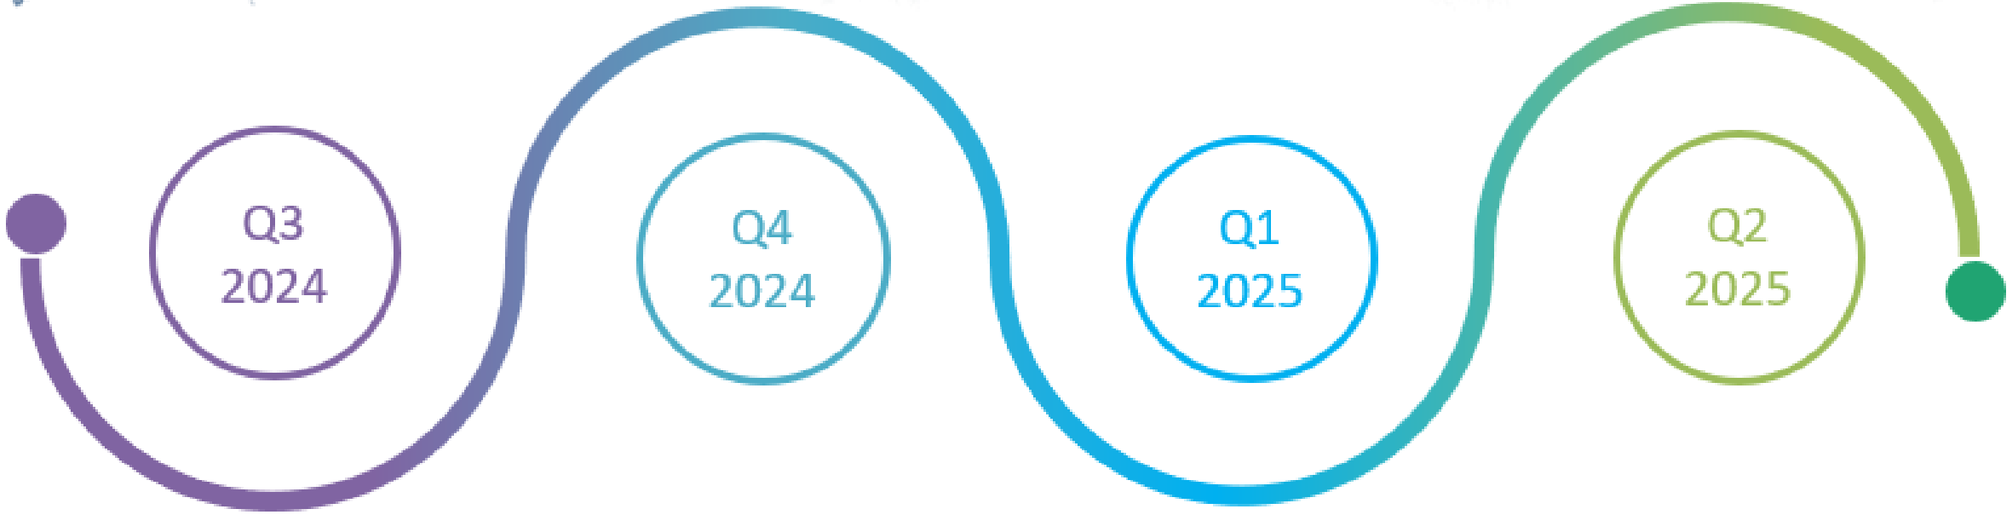
Hadron Therapy Center Groundbreaking

Groundbreaking ceremony at KIU: July 12, 2022

KUTAISI INTERNATIONAL UNIVERSITY

KIU HTC Roadmap



Construction

Construction process will be finished by Q3, 2024

Permissions

The operation and radiation safety permissions will be acquired from the national authorities

T & C

Testing and commissioning will be finished by Q1. 2025

First Patient

Fist patient will be received by Q2, 2025

IBA S2C2 (Super-Conducting Synchro-Cyclotron)

Maximum Energy:	230/250 MeV
Yoke/pole radius:	1.25 m/0.50 m
Weight:	50 tons
Mag. field central/extraction:	5.7 T/5.0 T
Initial cooldown:	12 days
Beam pulse rate/length:	1000 Hz/7 μsec
RF system frequency:	93-63 MHz
Voltage:	10 kV

Power: 60 kW

ქრონიკა 5

პირველი ციკლოტრონები საქართველოს დროშით

17:28

წარმატებული ტესტირების შემდეგ ციკლოტრონები ქუთაისის საერთაშორისო უნივერსიტეტის ადრონული თერაპიის ცენტრში განთავსდება

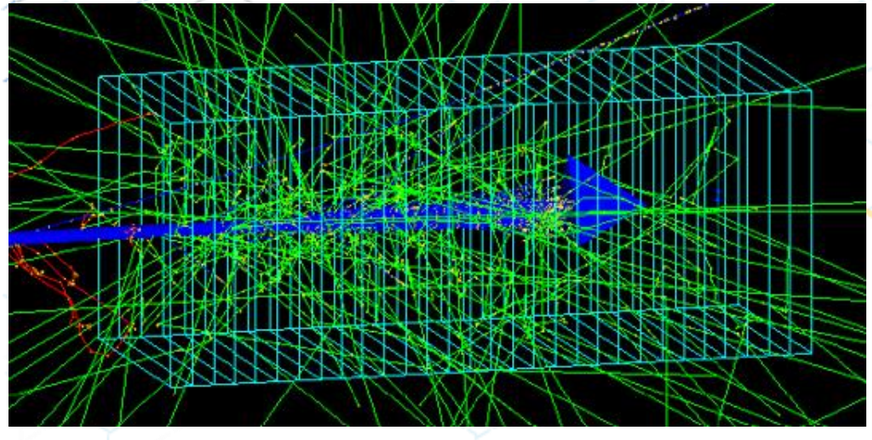
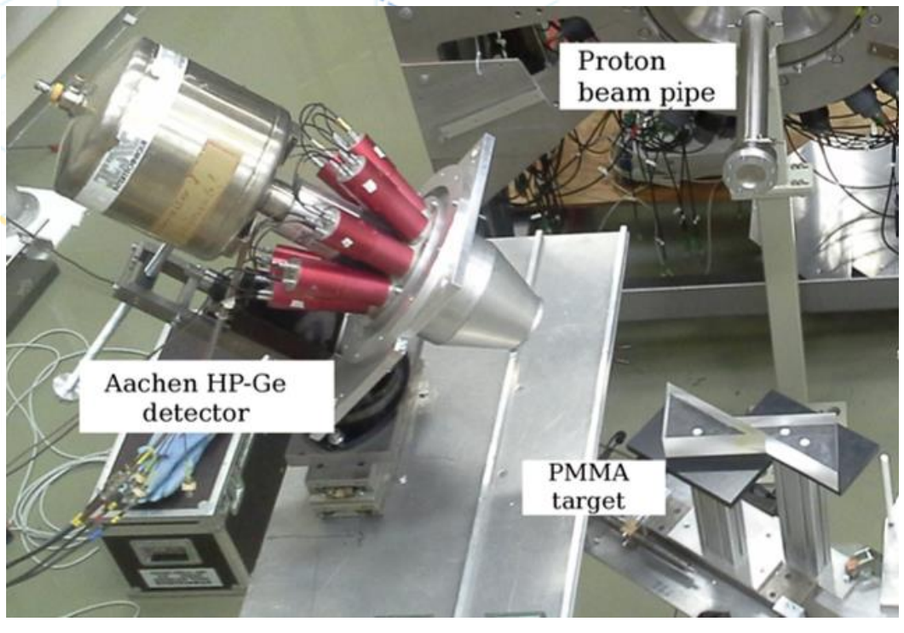
GEANT4
A SIMULATION TOOLKIT

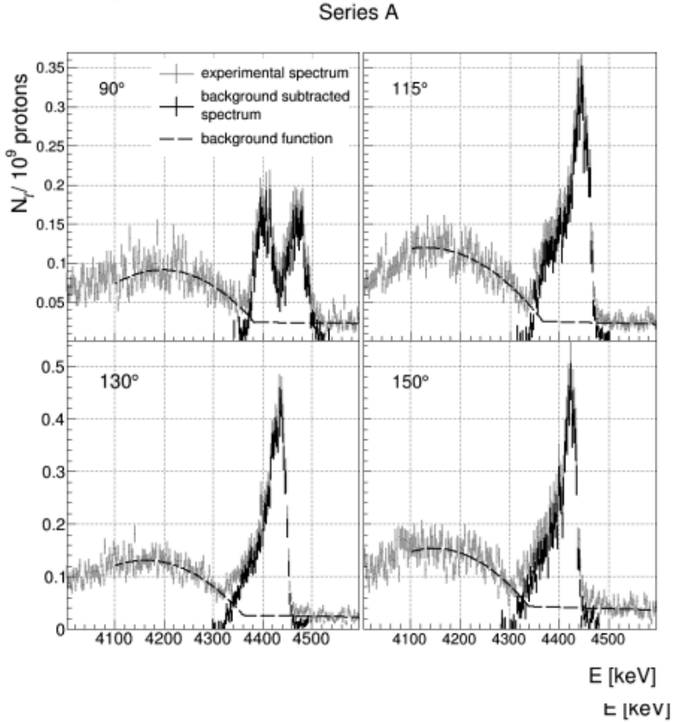
Simulations for proton therapy

Prompt photons for treatment monitoring; dose calculations

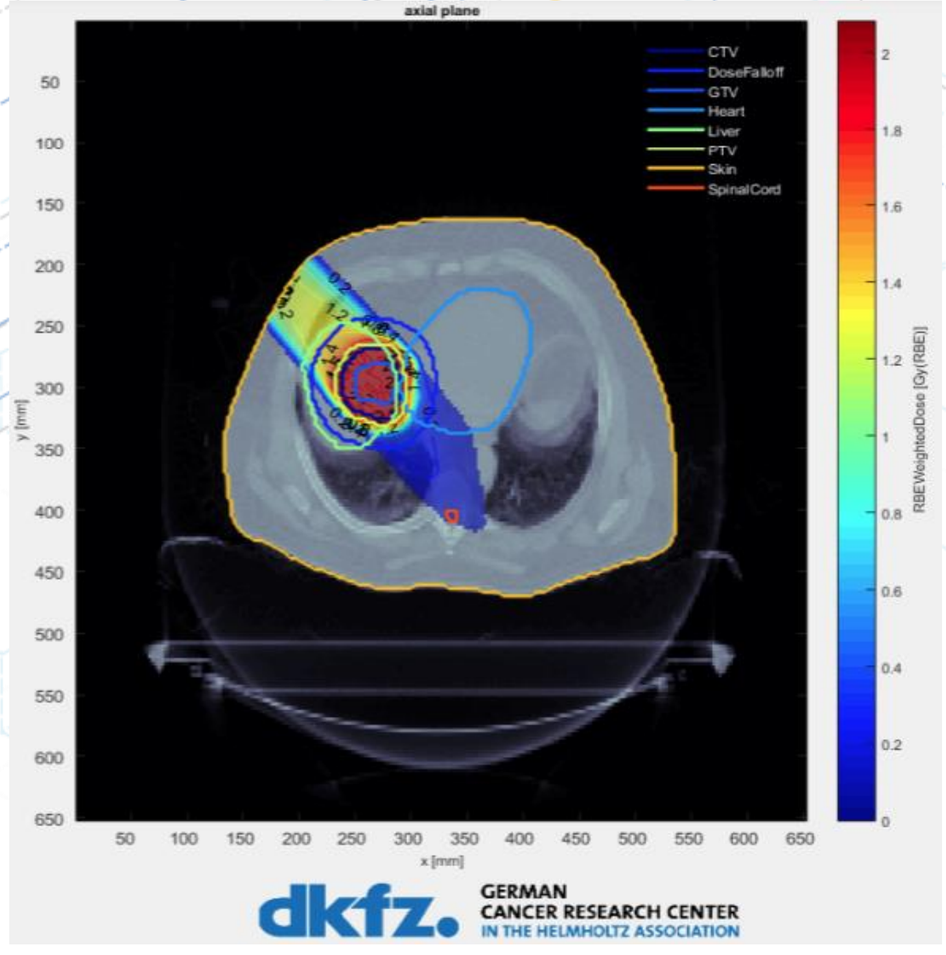


$$^{12}C(p,p'\gamma)C^{12}$$

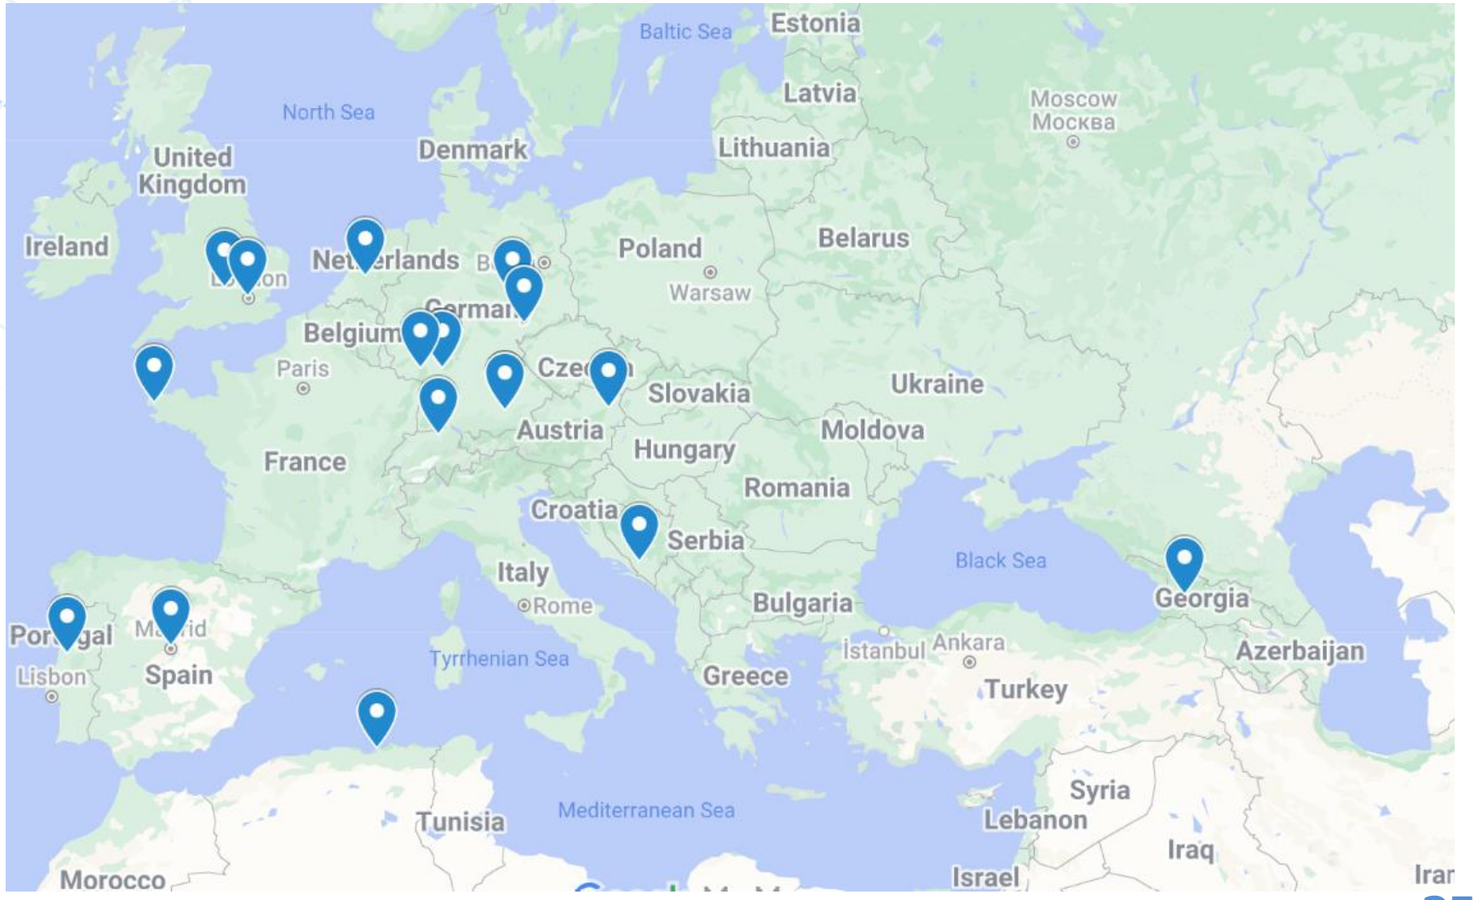




matRad



Open source software for radiation treatment planning for photon, proton, and carbon ion therapy.
Developed **for educational and research** purposes.
Entirely written in MATLAB.



KUTAISI INTERNATIONAL UNIVERSITY

Other European Projects

Advanced Particle (Cancer) Therapy Center in the Baltic States, in close cooperation with CERN and relevant stakeholders (August 2021)

Particle therapy options are still under review.

- Riga Technical University
- University of Tartu
- Vilnius University
- University of Latvia
- National Institute of Chemical Physics and Biophysics
- Kaunas University of Technology
- Riga Stradinš University
- Tallinn University of Technology
- Vytautas Magnus University

ENLIGHT

Other European Projects: SEEIIST

The South East European International Institute for Sustainable Technologies (www.seeiist.eu)

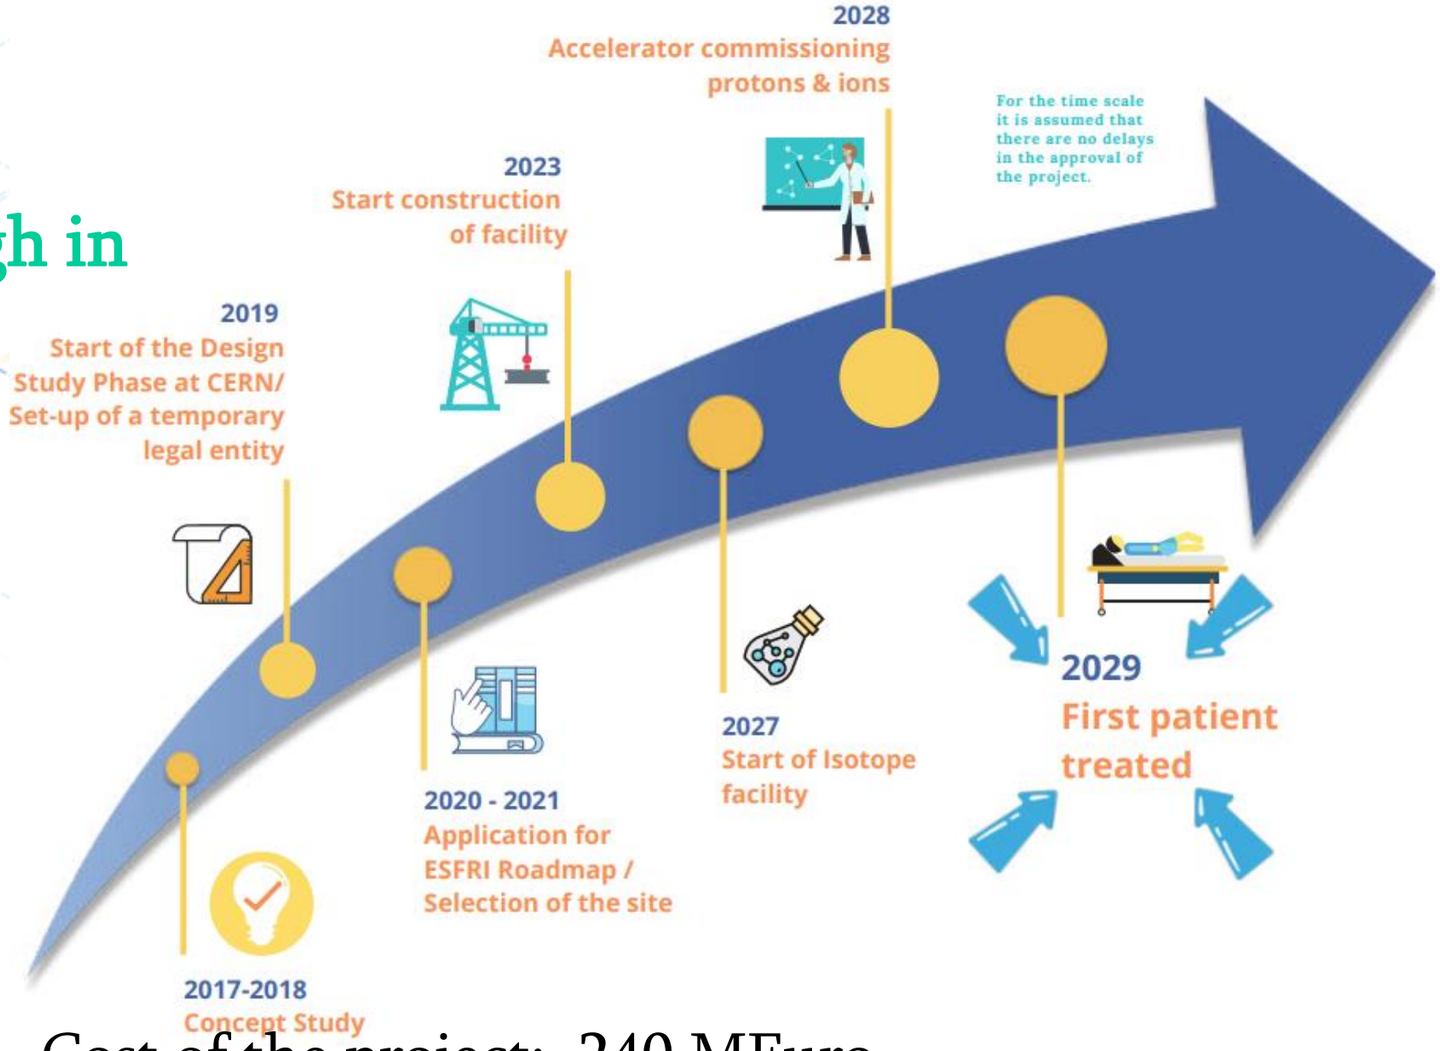
- Proposed in late 2016 by Prof. Herwig Schopper a former Director General of CERN
- 2017, March : received first official political support by the Government of Montenegro.

KUTAISI INTERNATIONAL UNIVERSITY

The Mission of SEEIIST

Combating cancer
Science for Society
Breakthrough in Technology

The **SEEIIST region** with a total population of about 40 million has no facility for PT.



Cost of the project: 240 MEuro
