

The R&D on target material at IPNO

Monday 27 June 2011 15:20 (20 minutes)

IPNO is actively pursuing R&D studies to improve the properties of fission targets both in the framework of future radioactive beam facilities and for the operation of the ALTO facility. Within the Spiral2 project, IPNO is studying several synthesis modes to improve both the density and the release of UCx targets. New actinide targets are studied through the Actilab project. The status of these studies will be presented.

Author: Ms COTTEREAU, Evelyne (IPN Orsay)

Co-authors: Dr OZGÜMÜS, Ahmet (IPN Orsay); Ms HY, Botoum (IPN Orsay); Dr ROUSSIÈRE, Brigitte (IPN Orsay); Dr LAU, Christophe (IPN Orsay); Dr CHEIKH MHAMED, Maher (IPN Orsay); Ms BARRÉ, Nicole (IPN Orsay)

Presenter: Ms COTTEREAU, Evelyne (IPN Orsay)

Session Classification: Target Material Studies
