

Injector MDs week 40

- PSB & PS MDs ongoing

- SPS MDs:

W39:

Crystal shadowing + TAX and wobbling (extraction to targets -T10 not strictly needed) + *hysteresis compensation* → Slot extended by 2h to recuperate some of the lost time in the recent weeks

Many thanks to physics coordination, OP & EA!

W40:

LIU MD

W41:

Spill studies + octupole folding (TED in the morning and extraction needed to primary targets in the **afternoon**)

Is there the possibility to extend the slot again for 2h to allow for some additional time recuperation?
