

DC24 Retrospective

Christoph Wissing, Mario Lassnig

DOMA General

March 6th, 2024

<https://indico.cern.ch/event/1388176/>

A big thank you

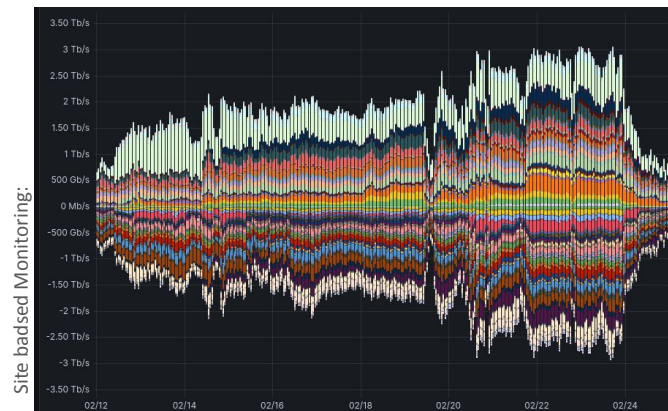

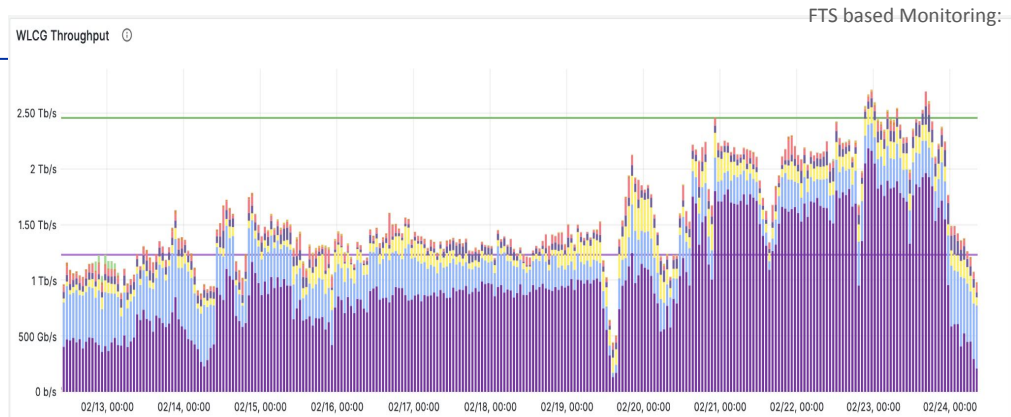

DC24 was generally successful

- Many thanks for your efforts!
- Global throughput rates were achieved
- No major interruptions for ongoing production
- Fell short of ambitious 48h sustained goal

Quite some material to understand

- FTS operations at extreme rates
- Middleware interdependencies
- Configuration consequences
- Consistency of monitoring

It was demanding and also a lot of fun!

Next steps

Second retrospective?

We already got two requests (SURFnet, INFN-T1) for report — unfortunately couldn't fit in this slot
Would like to get some first impressions at least from the T1s and larger T2s
When?

DC24 Final Report

Needs to be ready for the WLCG/HSF workshop, to be published on Zenodo (like the [previous one](#))

[Shared document](#) is available, with a proposed structure (experiments, middleware, networks, sites)

Please start filling with content, suggest structure changes, etc...

C&M will edit for readability and consistency

For interested authors who want to contribute *writing* towards a journal-quality article (for [Springer CSBS](#)) we will start the process after the WLCG/HSF workshop
