

Constraining the Cosmic Neutrino Background with NGC 1068

Jack Franklin

Joint APP, HEPP, NP Conference

10th April 2024

The Cosmic Neutrino Background

- The universe is filled with a sea of neutrinos
- Neutrinos decouple in the early universe
- Λ CDM: ~ 300 neutrinos per cm^3 left over from the Big Bang
- What we could learn about:
 - Early Universe Physics
 - BSM Neutrino Physics

Relic Neutrino Overabundance

What are the experimental bounds on the CνB?

$$\eta = \frac{n}{(56 \text{ cm}^{-3})}$$

- KATRIN Experiment: $\eta < 1.94 \times 10^{11}$

KATRIN Collaboration,
[10.1103/PhysRevLett.129.011806](https://arxiv.org/abs/10.1103/PhysRevLett.129.011806)

- Cosmic Rays: $\eta \lesssim 10^{11}$

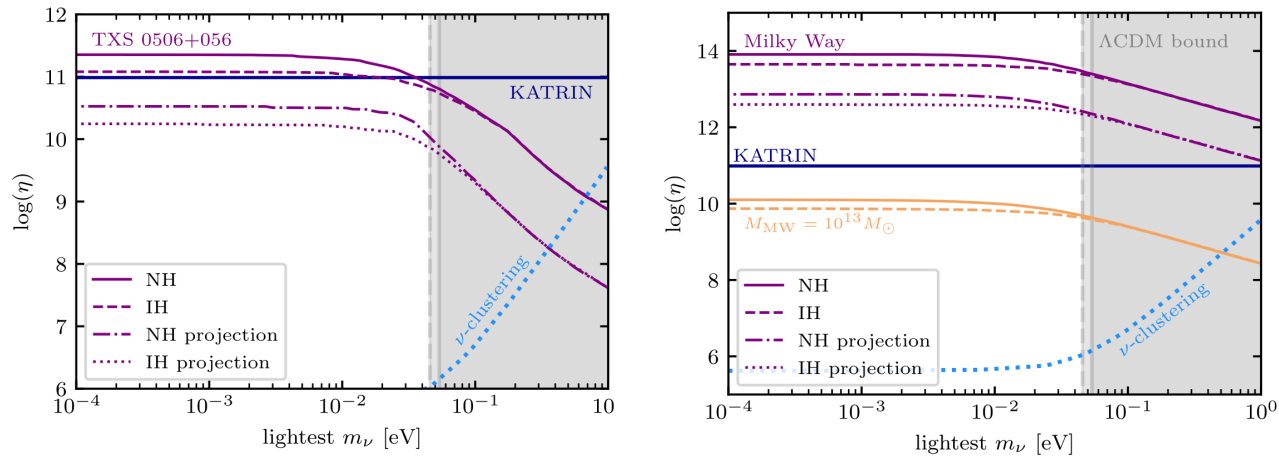

Mar Císcar-Monsalvatje et. al., [2402.00985](https://arxiv.org/abs/2402.00985)

Relic Neutrino Overabundance

What are the experimental bounds on the CvB?

$$\eta = \frac{n}{(56 \text{ cm}^{-3})}$$

Mar Císcar-Monsalvatje et. al., [2402.00985](#)

NGC 1068

- Galaxy with an active galactic nuclei (AGN)
- Around 14 Mpc from the Milky Way
- Most significant point-source at IceCube

IceCube Collaboration [10.1126/science.abg3395](https://www.icecube.wisc.edu/2018/10/11/10.1126/science.abg3395)

The Cosmic Neutrino Background

- Neutrinos from NGC 1068 are travelling through the CvB
- What if they interact with the relic neutrinos?

Transport Equation

Need to solve the transport equation for the flux:

$$\frac{\partial \Phi_i(r, E)}{\partial r} = -\Phi_i(r, E) \sum_j n_j \sigma_{ij}(E) + \sum_{j,k,l} n_k \int_E^\infty dE' \Phi_j(r, E') \frac{d\sigma_{jk \rightarrow il}}{dE}(E', E)$$

Transport Equation

Need to solve the transport equation for the flux:

$$\frac{\partial \Phi_i(r, E)}{\partial r} = -\Phi_i(r, E) \sum_j n_j \sigma_{ij}(E)$$

Φ : Flux
 n : Num. Density
 σ : SM Cross-Section

Depletion Term

- $\nu\nu \rightarrow \nu\nu$
- $\bar{\nu}\nu \rightarrow \bar{\nu}\nu$
- $\bar{\nu}\nu \rightarrow e^+e^-$

$$\sqrt{s} = \sqrt{2m_j E} \approx \text{keV} - \text{MeV}$$

Transport Equation

Need to solve the transport equation for the flux:

$$\frac{\partial \Phi_i(r, E)}{\partial r} =$$

$$+ \sum_{j,k,l} n_k \int_E^\infty dE' \Phi_j(r, E') \frac{d\sigma_{jk \rightarrow il}}{dE}(E', E)$$

Regeneration Term

= Upscattering + Downscattering

$$jk \rightarrow il$$

Transport Equation

Need to solve the transport equation for the flux:

$$\frac{\partial \Phi_i(r, E)}{\partial r} = -\Phi_i(r, E) \sum_j n_j \sigma_{ij}(E) + \sum_{j,k,l} n_k \int_E^\infty dE' \Phi_j(r, E') \frac{d\sigma_{jk \rightarrow il}}{dE}(E', E)$$

Fluxes at Earth

- New shoulder in flux
- $E_{\text{max}} \propto \frac{1}{n}$

Initial Flux

- Parametrise Initial Flux with a Power Law (PL):

$$\Phi = \Phi_0 \left(\frac{E}{E_0} \right)^{-\gamma}$$

Φ_0 : Normalisation at E_0

E_0 : Reference energy (1 TeV)

γ : Spectral index

IceCube Collaboration
[10.1126/science.abg3395](https://doi.org/10.1126/science.abg3395)

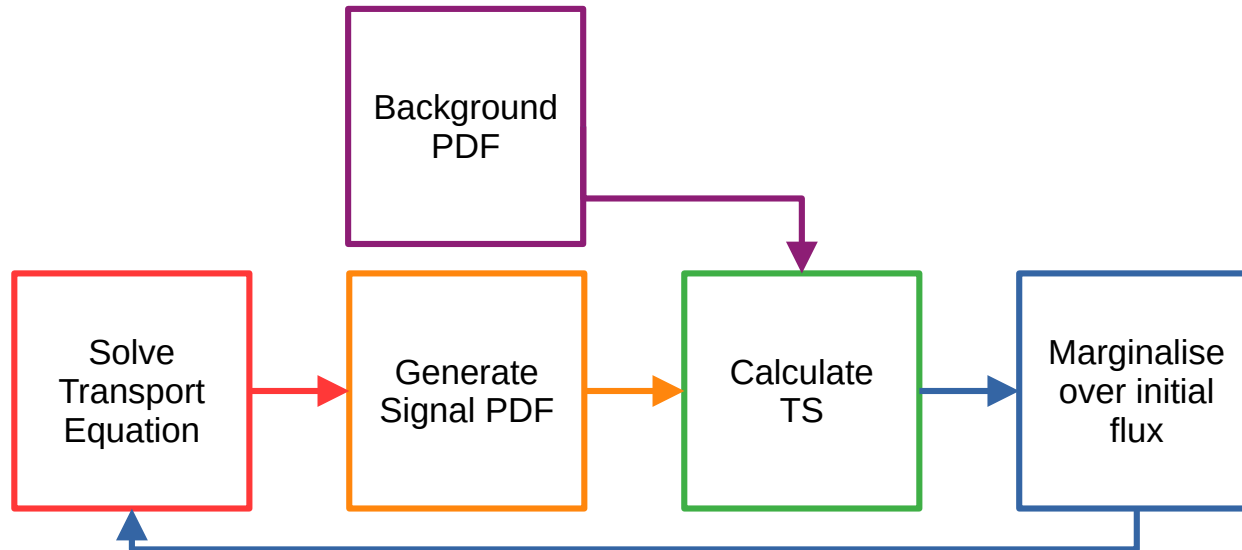

Analysis

$$TS = -2\Delta \log \mathcal{L} = -2 \log \left(\frac{\mathcal{L}(\gamma, \eta, n_s | \mathbf{x}_i, N)}{\mathcal{L}_0} \right)$$

Null hypothesis = best-fit PL

Analysis

$$TS = -2\Delta \log \mathcal{L} = -2 \log \left(\frac{\mathcal{L}(\gamma, \eta, n_s | \mathbf{x}_i, N)}{\mathcal{L}_0} \right)$$

Results

Results

Limited by statistics and methods in public data

Results

Results

- CvB Overdensity:
 $\eta < 3.9 \times 10^8$

Results

- CvB Overdensity:
 $\eta < 3.9 \times 10^8$
- Local Overdensity:
 $\eta \lesssim 5 \times 10^{11}$

Conclusion

- Direct observation constraints improved by over 2 orders of magnitude!
- A lot of constraining power still available right now with IceCube's improved analysis techniques
- Future improvements from:
 - More events
 - Higher energy neutrinos
- Extension to this work could also constrain neutrino NSIs

Backup Slides...

The IceCube Experiment

- Neutrino Observatory in Antarctica
- Uses ice as a medium for detecting neutrinos
- Consists of 86 “strings” of light-detecting modules

The IceCube Experiment

Finding Point Sources

Finding Point Sources

Finding Point Sources

Finding Point Sources

Finding Point Sources

Probability Density Functions

- Background events have no dependence on right ascension
- There are $\sim 100,000$ events, of which < 100 are signal
- The background pdf \sim pdf of **all** events

$$f_B(\hat{E}_{\mu,i}, \hat{\mathbf{d}}_i, \hat{\sigma}_i) = \frac{1}{2\pi} f_B(\hat{E}_{\mu,i}, \sin \hat{\delta}_i)$$

“Flatten”

Finding Point Sources

Probability Density Functions

$$f_S(\hat{E}_{\mu,i}, \hat{d}_i, \hat{\sigma}_i | \sin \delta_{\text{src}}, \theta) \approx \frac{1}{2\pi\hat{\psi}_i} f_S(\hat{\psi}_i | \hat{E}_{\mu,i}, \sigma_i, \theta) \times f_S(\hat{E}_{\mu,i} | \sin \delta_{\text{src}}, \theta)$$

Finding Point Sources

Probability Density Functions

$$f_S(\hat{E}_{\mu,i}, \hat{d}_i, \hat{\sigma}_i | \sin \delta_{\text{src}}, \theta) \approx \frac{1}{2\pi\hat{\psi}_i} f_S(\hat{\psi}_i | \hat{E}_{\mu,i}, \sigma_i, \theta) \times f_S(\hat{E}_{\mu,i} | \sin \delta_{\text{src}}, \theta)$$

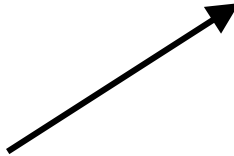

Rayleigh Distribution

Finding Point Sources

Probability Density Functions

$$f_S(\hat{E}_{\mu,i}, \hat{d}_i, \hat{\sigma}_i | \sin \delta_{\text{src}}, \theta) \approx \frac{1}{2\pi\hat{\psi}_i} f_S(\hat{\psi}_i | \hat{E}_{\mu,i}, \sigma_i, \theta) \times f_S(\hat{E}_{\mu,i} | \sin \delta_{\text{src}}, \theta)$$

$$f_S(\hat{E}_{\mu,i} | \sin \delta_{\text{src}}, \theta) = \int dE_\nu \underbrace{f(E_\nu | \sin \delta_{\text{src}}, \theta)}_{\text{green bar}} \underbrace{f(\hat{E}_{\mu,i} | E_\nu, \sin \delta_{\text{src}})}_{\text{red bar}}$$

NGC1068

- Our best fit values (2.9σ):

$$n_s = 29.6, \gamma = 3.37$$

- New IC method results (5σ):

$$n_s = 79, \gamma = 3.2$$

The Cosmic Neutrino Background

Could they interact?

Mean free path: $\lambda = \frac{1}{n\sigma}$, $\sigma \approx G_F^2 s = 2G_F^2 E_\nu m_\nu$

$$\frac{L}{\lambda} \approx 1.5 \times 10^{-8} \left(\frac{L}{14.4 \text{ Mpc}} \right) \left(\frac{n}{56 \text{ cm}^{-3}} \right) \left(\frac{E_\nu}{1 \text{ TeV}} \right) \left(\frac{m_\nu}{1 \text{ meV}} \right)$$

Point Source Analysis Results

Science Paper:

- New data
- Better energy reconstruction
- More accurate pdfs

SkyLLH:

- Includes data pre IC86II
