

International Conference on QCD Vacuum Structure and Confinement (QCD-VSC-2024)

26 - 30 August 2024

Naxos Island of Cyclades, Greece

Manifestations of High-Energy QCD Asymptotics

Victor T. Kim

**Petersburg Nuclear Physics Institute
NRC Kurchatov Institute, Gatchina**

Outline:

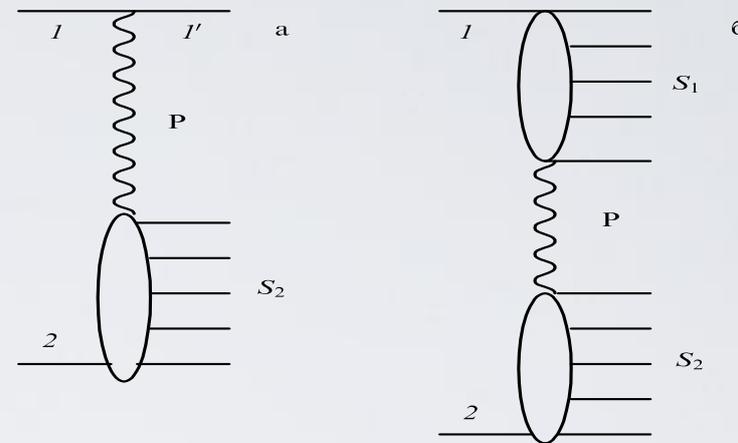

- **Introduction & Motivation**
- **High-energy asymptotics of QCD: BFKL evolution**
- **Manifestation of BFKL evolution at LHC**
- **Summary**

High-Energy Asymptotics: Pomeron

Pomeron at high energies is responsible for:

- elastic scattering
- diffractive scattering
- inelastic scattering
- total x-section

Pomeron before QCD: original foundations

asymptotic theorem:

particle and antiparticle x-section equality

I. Pomeranchuk 34 (1958) 725

$$\eta(0) s^{\alpha(0)} \exp \left[\frac{B_0}{2} + \alpha' \right]$$

jectories and the residue
signature factor $\eta(t)$
amplitude. The ratio of
pole is exchanged, is η

non-relativistic scattering: Regge poles

T. Regge (1959, 1960)

relativistic scattering: Regge poles

V. Gribov Nucl. Phys. 22 (1961) 249

Gribov-Froissart representation

M. Froissart Phys. Rev. 123 (1961) 1053

Pomeron: vacuum pole and trajectory $\alpha_{IP}(t) = \alpha_{IP}(0) + \alpha'_{IP} \cdot t$

V. Gribov ZhETP 41 (1961) 667 [JETP 14 (1962) 472]

G. Chew, S. Frautschi PRL 7 (1961) 394

$$-1, C = -1, G = -1, I$$

$$\frac{d\sigma_{el}}{dt} = F(t) s^{2\alpha(0)-2} e^{-2\alpha' |t| \ln s}$$

➡ elastic & diffractive cone shrinkage

➡ x-section: constant with energy IHEP (Protvino) U70 data since 1967

ories discussed in Sect. 5.7 have inte

Unitarity condition:

Froissart-Martin x-section asymptotic bound $\leq \log^2(s)$

M. Foissart Phys. Rev. 123 (1961) 1053

Reggeon field theory

V.N. Gribov (1967)

multi-Pomeron exchanges

V.N. Gribov, A.A. Migdal (1968-1970)

K.A. Ter-Martirosyan, A.A. Migdal, A.M. Polyakov 1972-1975

A.B. Kaidalov K.A. Ter-Martirosyan 1973-1979

supercritical Pomeron $\alpha_{\text{IP}}(0) > 1$

V.N. Gribov, A.A. Migdal, A.M. Polyakov 1970-1975

strongly-interacting supercritical Pomeron

V.N. Gribov, A.A. Migdal, A.M. Polyakov 1969

Born approximation: two-gluon Pomeron

F.E. Low, Phys. Rev. D12 (1975) 163

S. Nussinov, Phys. Rev. Lett. 34 (1975) 1286

Leading logarithmic approximation: LL BFKL Pomeron

V.S. Fadin, E.A. Kuraev, L.N. Lipatov, Phys. Lett. B 60 (1975) 50

E.A. Kuraev, L.N. Lipatov, V.S. Fadin, ZhETF 71 (1976) 840 [JETP 45 (1977) 79]

E.A. Kuraev, L.N. Lipatov, V.S. Fadin, ZhETF 72 (1977) 377 [JETP 45 (1977) 79]

I.I. Balitsky, L.N. Lipatov, Yad. Fiz. 28 (1978) 1597

Next-to-leading logarithmic approximation: NLL BFKL Pomeron

V.S. Fadin, L.N. Lipatov, Phys. Lett. B 429 (1998) 127

E.A. Camici, L.N. Ciafaloni, Phys. Lett. (1998)

S.J. Brodsky V.S. Fadin, VK, L.N. Lipatov, G.B. Pivovarov, Pisma ZhETF 70 (1999) 161 (BFKLP)

- Large-angle scattering (hard processes):

QCD in Bjorken limit

- **GLAPD: V. Gribov & L. Lipatov (71-72); L. Lipatov (74);
G. Altarelli & G. Parisi (77); Yu. Dokshitzer (77)**

- Small-angle scattering (“semi-hard” processes):

QED in Gribov-Regge limit

- **V. Gribov, V. Gorshkov, L. Lipatov & G. Frolov (67-70)
H. Cheng & T. Wu (66-70)**

QCD in Gribov-Regge limit

- **BFKL: V. Fadin, E. Kuraev & L. Lipatov (75-78)
I. Balitsky & L. Lipatov (78)**

High-energy QCD asymptotics: GLAPD and BFKL

$$s=(p_1+p_2)^2$$
$$t=(p_1-p_3)^2 \quad Q^2=-t$$

Scattering in the Standard Model (QCD) at high energies:

Large logarithms: as $\log(s)$, as $\log(Q^2)$

Bjorken limit (large-angle scattering):

$$s \sim Q^2 \gg m^2$$

$$Q^2/s = x \sim 1$$

Gribov-Lipatov-Altarelli-Parisi-Dokshitzer (GLAPD):

$(a_s \log(Q^2))^n$ resummation

Inclusive cross section $\sim 1/Q^4$

Gribov-Regge limit (small-angle scattering):

$$s \gg Q^2 \gg m^2$$

$$Q^2/s = x \Rightarrow 0$$

Balitsky-Fadin-Kuraev-Lipatov (BFKL):

$(a_s \log(s))^n$ resummation

Total cross section $\sim s^{(a_P-1)}$

a_P – Pomeron intercept

soft scattering data: $a_P = 1.1$

pQCD x-section asymptotics

Bjorken limit (GLAPD):

$$s \sim Q^2 \gg m^2$$

$$Q^2/s = x \sim 1$$

Large-angle (large-x) scattering

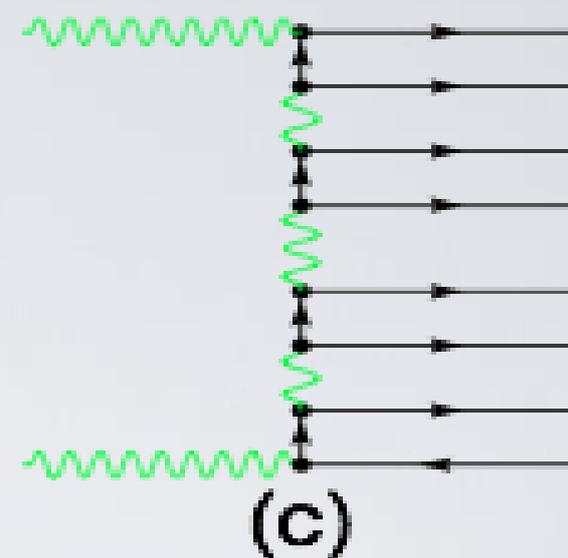

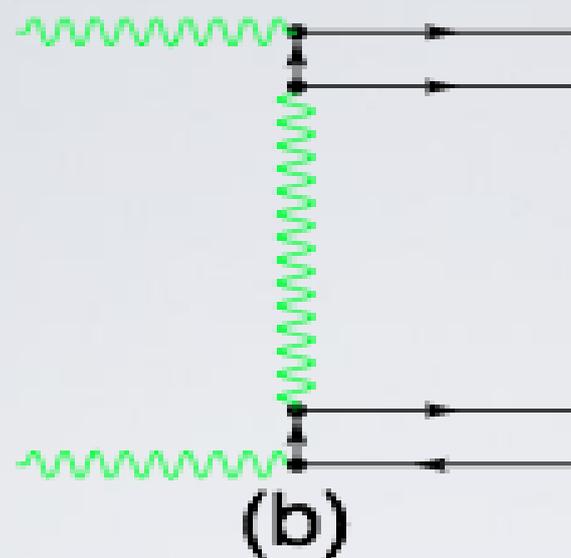

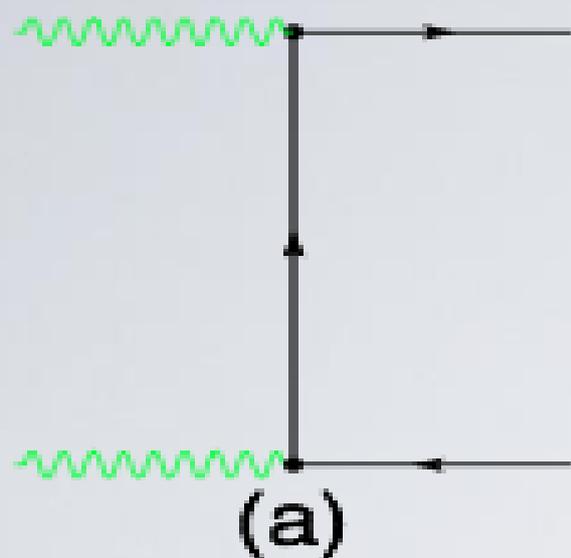

Gribov-Regge limit (BFKL): $s \gg Q^2 \gg m^2$

$$Q^2/s = x \rightarrow 0$$

Small-angle (small-x) scattering

Asymptotics of QED cross sections

$$\sigma \sim (\alpha_{\text{QED}})^2 \log(s)/s$$

$$\sigma \sim (\alpha_{\text{QED}})^4 \text{const}(s)$$

All orders: V.N. Gribov, L.N. Lipatov, G.V. Frolov & V.G. Gorshkov (69-71)
H. Cheng & T.T. Wu (69-70)

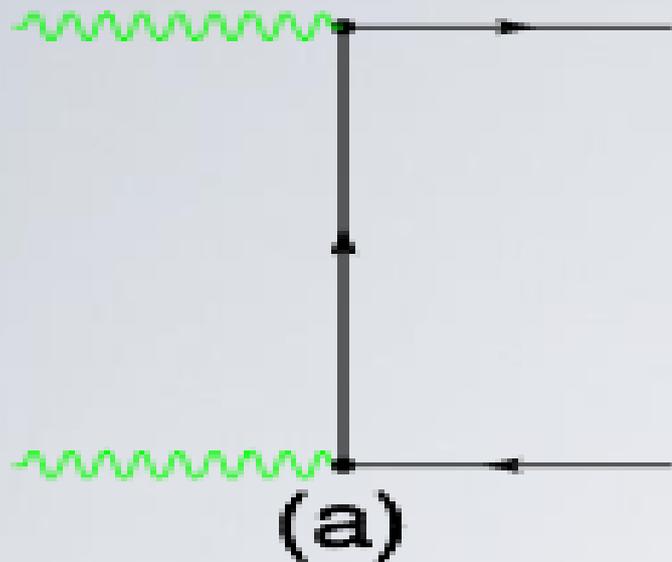

Cross section at $s \rightarrow \infty$: $\sim (\alpha_{\text{QED}})^4 (S/S_0)^{a_P-1}$

$$a_P = 1 + C (\alpha_{\text{QED}})^2 \approx 1.002$$

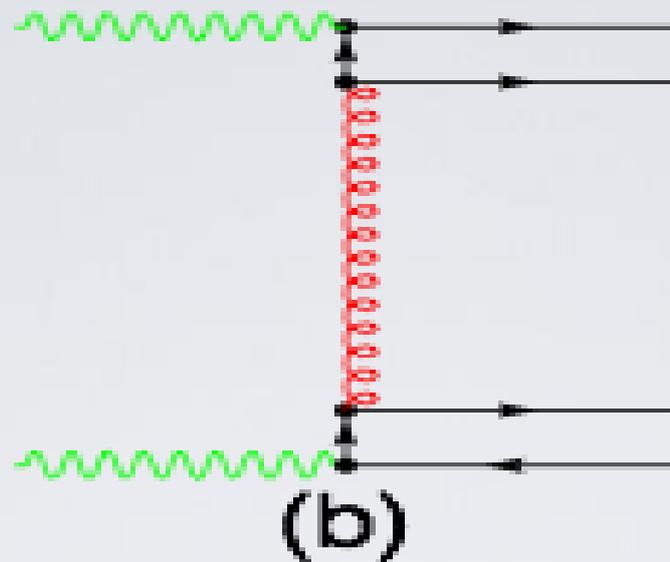

photon: no reggeization!

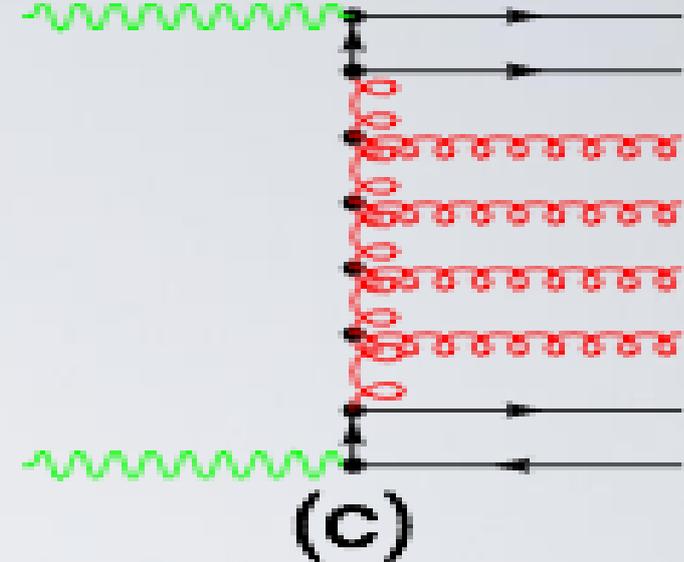

High-energy limit pQCD as LL BFKL: $\gamma\gamma$

$$\sigma \sim (\alpha_{\text{QED}})^2 \log(s)/s$$

$$\sigma \sim (\alpha_{\text{QED}})^2 (\alpha_s)^2 \text{const}(s)$$

Resummation of all leading logarithms: LL BFKL

gluon: reggeization!

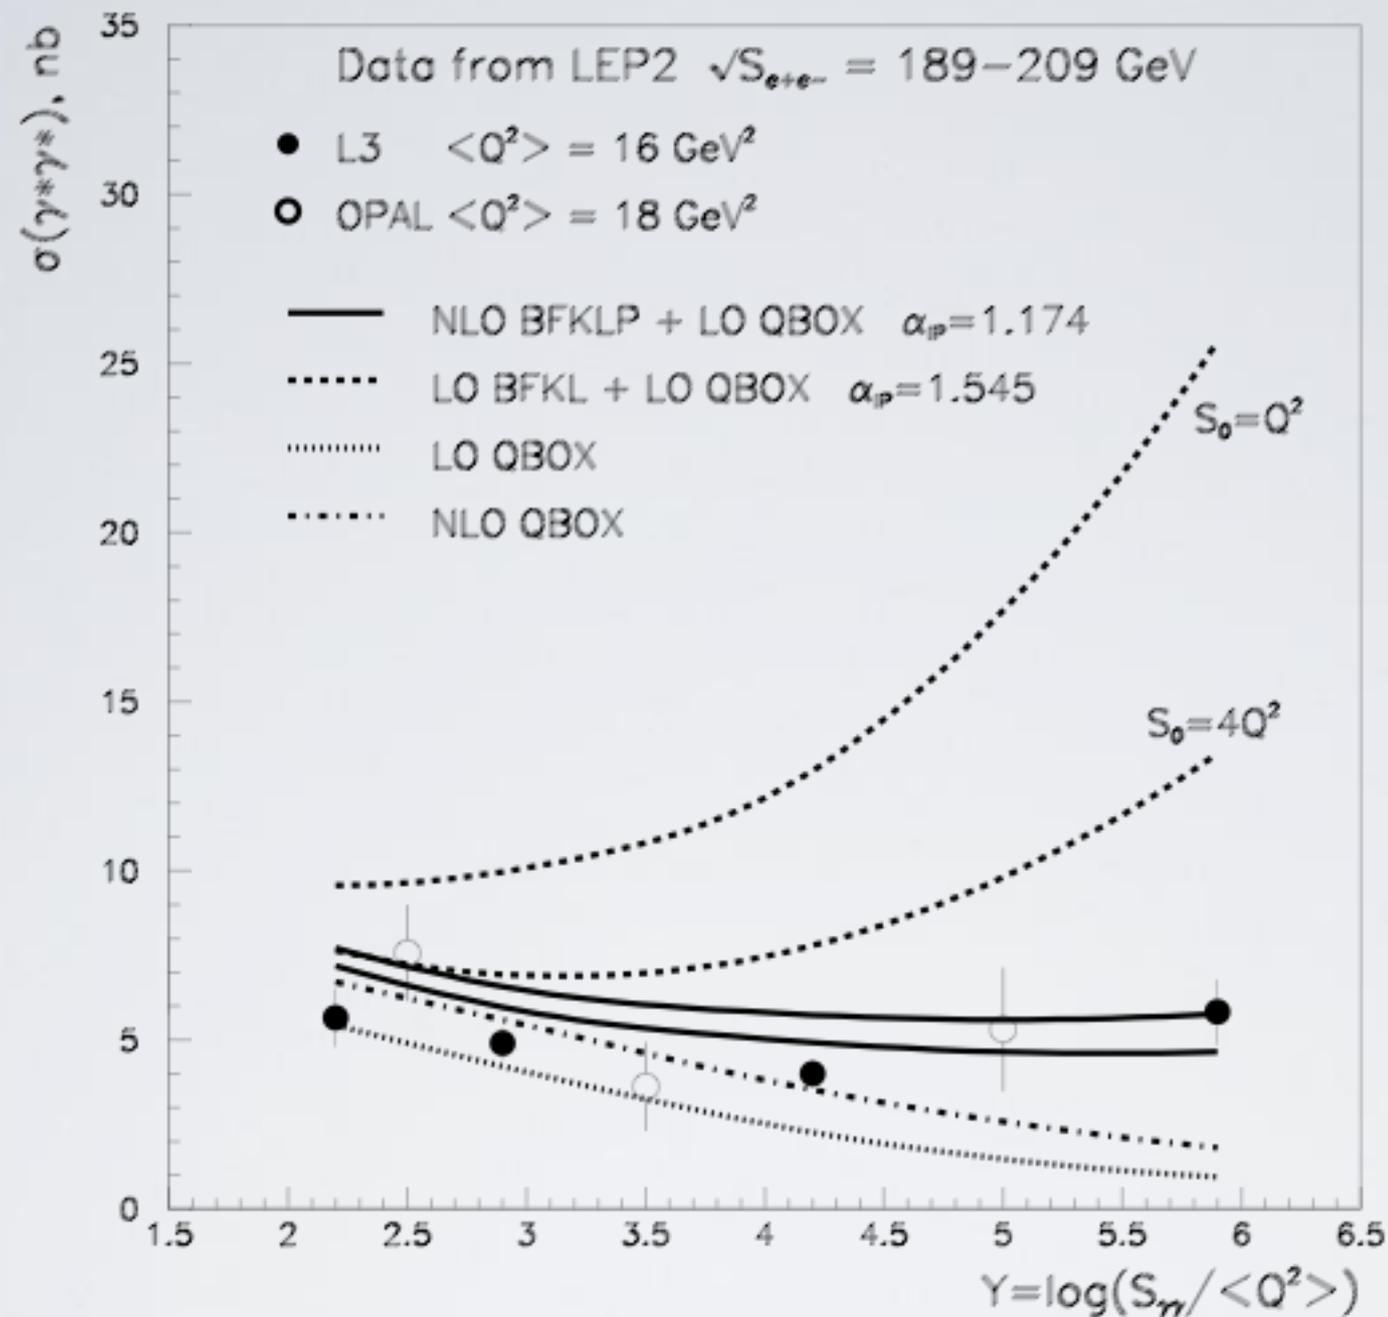

Cross section at $s \rightarrow \infty$: $\sim (\alpha_{\text{QED}})^2 (\alpha_s)^2 (S/S_0)^{a_P-1}$

$a_P = 1 + C \alpha_s \approx 1.5$ LL BFKL S. Brodsky & F. Hautmann (96)

$a_P = 1 + C \alpha_s \approx 1.2$ NLL BFKL

S. Brodsky, V Fadin, VK, L. Lipatov, G. Pivovarov (2001-02)

Highly virtual photon scattering at LEP-2

S.J Brodsky, VK, L.N. Lipatov, V.S. Fadin & G.B. Pivovarov (2002)

BFKLP: NLL BFKL + generalized BLM

LO Impact factor

Full NLL BFKL calculations: require extra studies

LL BFKL: problems

LL BFKL: designed for infinite collision energies
multi-Regge-kinematics

LL BFKL problems (at finite energies):

- fixed (non-running) coupling α_s
- energy-momentum conservation
- transverse momentum conservation

Cross section in LL BFKL:

$$\sigma = \sigma_0 (S/S_0)^{a_P-1} \quad a_P = 1 + C \alpha_s \approx 1.5-1.6$$

Data: $a_P \approx 1.2-1.3$

BFKL: next-to-leading logs (NLL) improved by running a_s

next-to-leading log approximation (NLL) BFKL
MSbar-renormalization scheme: large corrections

V.S. Fadin & L.N. Lipatov (89-98)

C.Camici & M. Ciafaloni (96-98)

BFKLP: NLL BFKL + resummation of running coupling a_s
generalized for the case with non-Abelian LO

S.J. Brodsky, V.S. Fadin, VK, L.N. Lipatov, G.B. Pivovarov(98-99) BFKLP

→ BLM approach Brodsky, Lepage & Mackenzie – 1983

→ works only (!) for the case with Abelian LO

BFKLP: generalized BLM for non-Abelian case

S.Brodsky, P. Lepage, P.Mackenzie (1983) BLM

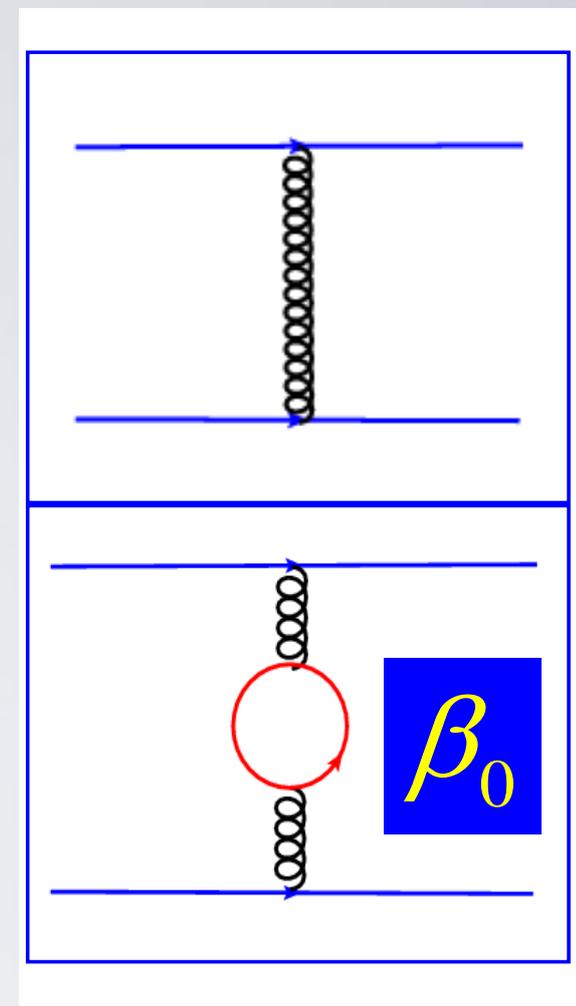

propagator insertions. It seems difficult if not impossible to separate the divergent part of the vertex, which realizes α_s from the finite process dependent part i

$$\beta_0 = \frac{11}{3} N_C - \frac{2}{3} n_F$$

$$\mu^2 \frac{d\alpha_s}{d\mu^2} = \beta(\alpha_s) = - \sum_{i \geq 0} \beta_i(n_f) \alpha_s^{i+2}$$

(d) Equation (11a) is a particularly convenient perturbative results since all flavor dependence is explicit in the definition of $\alpha_{\overline{MS}}$.

The β function is defined in terms of any (c) The leading-order β_0 which comes from quadratic divergences. This is usually all that

LO Abelian -> LO non-Abelian

MSbar-scheme -> MOM scheme 3g-vertex

S.Brodsky, V.Fadin, VK, L.Lipatov, G. Pivovarov(99) BFKLP

BFKLP (generalized BLM) works for non-Abelian cases

NLL BFKL and $Y \rightarrow ggg$ decay

Naïve BLM application does not work (!):

- **NLL BFKL in \overline{MS} scheme**
- **Upsilon $\rightarrow ggg$ decay in NLO in \overline{MS} scheme**

\overline{MS} -scheme: nonphysical RG scheme (!)

numerically close to V-scheme (heavy quark potential) – Abelian in LO

physical RG scheme: MOM scheme (gauge dependent)

- **NLL BFKL** **<- non-Abelian in LO**
- **Upsilon $\rightarrow ggg$ decay** **<- non-Abelian in LO**

one can use MOM-scheme based on ggg-vertex non-Abelian in LO

BLM generalized for non-Abelian case:

S.J. Brodsky, V.S. Fadin, VK, L.N. Lipatov, G.B. Pivovarov(98-99) BFKLP

BFKLP: NLL BFKL + resummation of running coupling as

BLM resummation depends on non-Abelian structure in LO

BFKLP: NLL BFKL within generalized BLM

S.J. Brodsky, V.S. Fadin, VK, L.N. Lipatov, G.B. Pivovarov(98-99) BFKLP

$$\omega_{\overline{MS}}(Q_1^2, \nu) = \int d^2 Q_2 K_{\overline{MS}}(\mathbf{Q}_1, \mathbf{Q}_2) \left(\frac{Q_2^2}{Q_1^2} \right)^{-\frac{1}{2} + i\nu}$$

$$\sigma \sim s^{\alpha_{IP} - 1} = s^{\omega_{\max}}$$

$$= N_C \chi_L(\nu) \frac{\alpha_{\overline{MS}}(Q_1^2)}{\pi} \left[1 + r_{\overline{MS}}(\nu) \frac{\alpha_{\overline{MS}}(Q_1^2)}{\pi} \right],$$

$$\chi_L(\nu) = 2\psi(1) - \psi(1/2 + i\nu) - \psi(1/2 - i\nu)$$

$$r_{\overline{MS}}(\nu) = r_{\overline{MS}}^{\beta}(\nu) + r_{\overline{MS}}^{\text{conf}}(\nu)$$

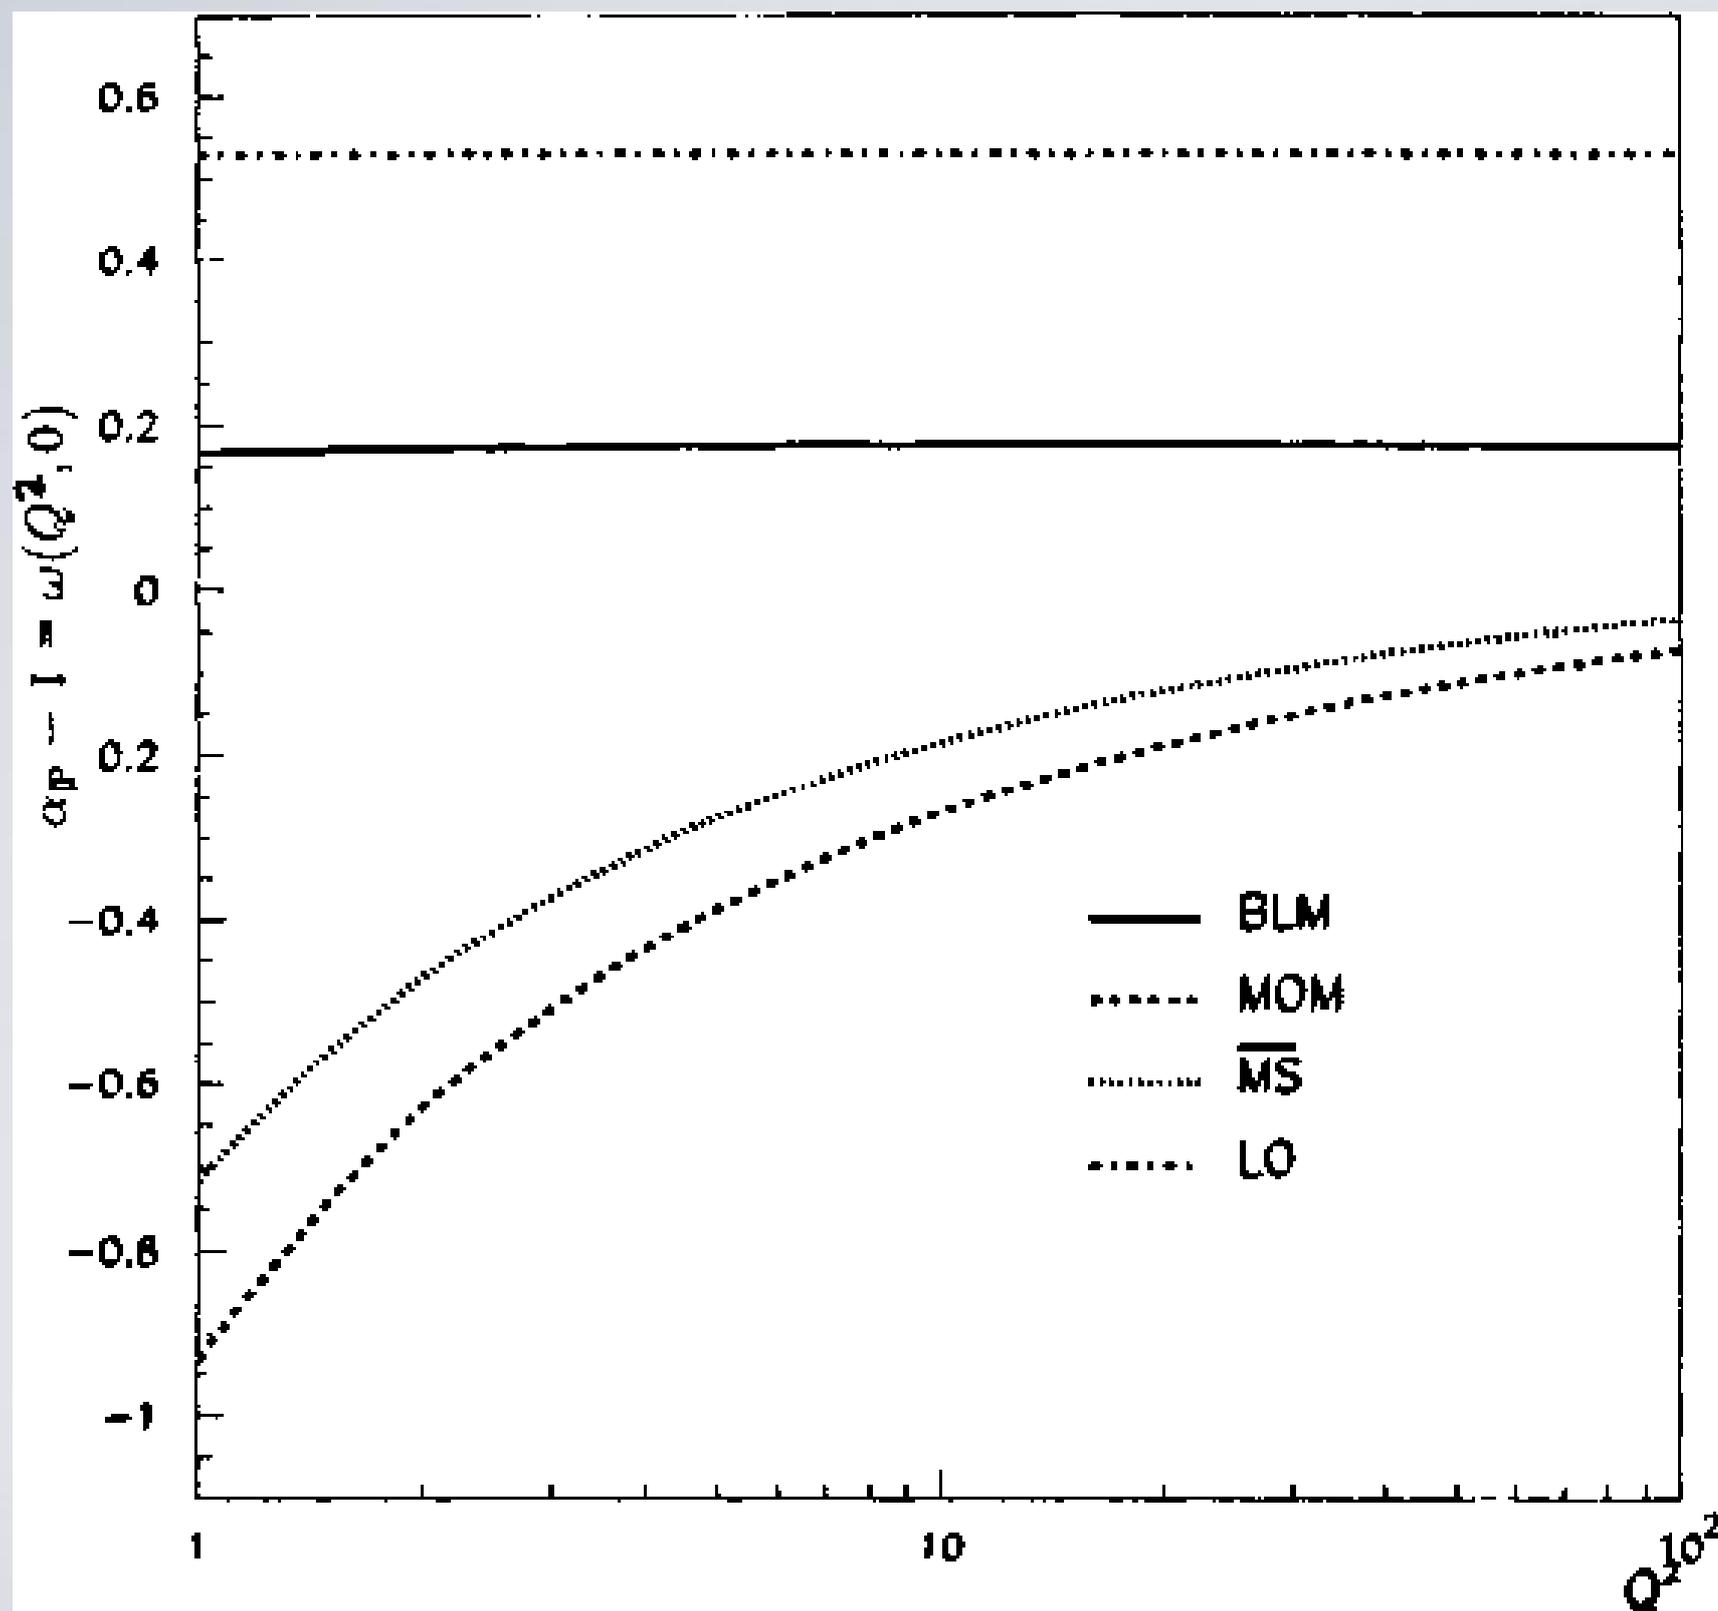

$$r_{\overline{MS}}^{\beta}(\nu) = -\frac{\beta_0}{4} \left[\frac{1}{2} \chi_L(\nu) - \frac{5}{3} \right]$$

$$r_{\overline{MS}}^{\text{conf}}(\nu) = -\frac{N_C}{4\chi_L(\nu)} \left[\frac{\pi^2 \sinh(\pi\nu)}{2\nu \cosh^2(\pi\nu)} \left(3 + \left(1 + \frac{N_F}{N_C^3} \right) \frac{11 + 12\nu^2}{16(1 + \nu^2)} \right) - \chi_L''(\nu) + \frac{\pi^2 - 4}{3} \chi_L(\nu) - \frac{\pi^3}{\cosh(\pi\nu)} - 6\zeta(3) + 4\varphi(\nu) \right]$$

CD N=4 A.V. Kotikov, L.N. Lipatov (2000)

BFKLP: NLL BFKL within generalized BLM

$$\sigma \sim S^{\alpha_{IP} - 1} = S^{\omega_{\max}}$$

BFKLP: NLL BFKL within generalized BLM

V.S. Fadin & L.N. Lipatov (89-98)

C. Camici & M. Ciafaloni (96-98)

next-to-leading log approximation (NLL) BFKL

$\overline{\text{MS}}$ -renormalization scheme: large corrections
