### High-energy nuclear physics and heavy ion collisions with CMS

**Austin Baty** University of Illinois Chicago abaty.github.io

July 3, 2024 **CMS PURSUE/SPRINT Program** Fermilab

UNIVERSITY OF UIC **ILLINOIS CHICAGO** 

## What is nuclear physics?

# What is nuclear physics?

- All those applications come from understanding nuclei and the protons/neutrons inside of them
- Protons/neutrons form 99% of the visible mass in the universe!
- We don't understand details of what nuclei look like microscopically

## Low energy nuclear physics

#### PERIODIC TABLE OF ELEMENTS

- Low energy nuclear physics studies how nuclear isotopes can decay
- Searching for new elements, etc.
- What is 'high energy' nuclear physics?

## How are atoms held together?

- Electric (or electromagnetic) force
  - Opposite signs attract each other
  - Same sign charged repel each other

# 0

#### **Electrostatic Force**

# How are nuclei held together?

- All protons have positive charge
  - How does the nucleus stay together?
- There is another force the strong force!

gether? ong force!

#### **Electrostatic Force**

## The Standard Model

### The SM describes 3 fundamental forces of nature

#### Standard Model of Elementary Particles

- Quantum Electrodynamics (QED)
  - **Fundamental theory of** 
    - electromagnetism

## Quantum Electrodynamics

#### **Standard Model of Elementary Particles**

# Quantum Chromodynamics

- - **Theory of strong force**

  - charge

#### **Standard Model of Elementary Particles**

## Confinement

- Quarks are always stuck together by gluons confined
- Protons/neutrons have 3 quarks stuck together
- Nuclei are many protons/neutrons stuck together
  - High energy nuclear physics wants to understand quarks/gluons

Phys.Rev.D 81:034504,2010

Proton

Neutron

# Studying quarks and gluons

- 3 quark picture is simple; gluons important at higher energies!
- How can we study quarks and gluons if they are confined?

## Analogy time - Iceworld!

## A collision on iceworld!

### A meteor hits and heats up ice world!

## Discovery of liquid water!

- Liquid water discovered!
- Same molecules
- Same force
- Different phase of matter

### Phases of water

### Steam

### Liquid Water

lce

## Phases of water

### Steam

### Liquid Water

lce

## Physicist's view of water

- Water is very complex!
- Electromagnetism is well understood!

#### Temperature

### What does the phase diagram look like for nuclear matter?

# How to study quarks and gluons

### If we can heat up nuclei enough, can we 'melt' the protons/neutrons into quarks and gluons?

## Quark-Gluon plasma

- High energy nucleus collisions get very hot
- Protons/neutrons melt into a new form of matter
  - Quark-Gluon plasma deconfined!

### Can't achieve high enough temperatures conventionally

# Heavy Ion Collisions

- Created with ion collisions!
- Hottest man-made form of matter
- QGP cools into particles
  - Detect particles, infer quark-gluon plasma properties
- QGP shows very complex behavior!

# Relativistic Heavy Ion Collider

RHIC

STAR

- THE REAL PROPERTY OF

139

#### SPHENIX ASSEMBLY UNDERWAY Operating!

LINAC

E Star .

### BOOSTER AGS

EBIS

NSRL .

### Top energy of 200 GeV per nucleon pair Can accelerate almost any element

# Large Hadron Collider

**CERN** Prévessin

 Runs heavy ions ~1 month / year Top energy of 5.5 TeV per nucleon pair: 1 PeV (0.1 mJ) total collision energy Accelerates protons, Pb<sup>208</sup>, Xe<sup>129</sup>

SUISSI

ERANCE

- Nucleus collisions ~1 month of each year

## LHC Schedule

LHC mostly does proton-proton collisions for high-energy physics

### Time: 0.10

rapidity 5 2.5 0 -2.5 -5

### Heavy Ion Collisions

## Compact Muon Solenoid

General purpose experiment
 50' toll: 14,000 toppose

The second second second

- 50' tall; 14,000 tonnes
- 3.8 Tesla magnetic field
- >2000 collaborators

# pp Event (Not nucleus collision!)

Min-Bias PP (13 TeV)

https://github.com/abaty/OpenGL\_LHC

CMS Experiment at the LHC, CERN Data recorded: 2018-Nov-08 20:48:06.756040 GMT Run / Event / LS: 326382 / 309207 / 7

#### **Challenging to track all particles**

# "Perfect Liquid"

10

n/S

0.1

- QGP behaves like a liquid!
- Viscosity 'thickness' of the fluid

QGP 'flows' very easily

Nature Physics volume 15, 1113–1117 (2019)

# Speed of sound in QGP?

- How fast do pressure waves travel through the QGP?

# How fast do you have to go to make a 'sonic boom' in QGP?

- Theoretical predictions have been calculated for QGP speed of sound on massive supercomputers
- One of the few things that can be predicted theoretically **Does experiment agree with theory?**

## **QGP Speed of Sound**

## Proton-nucleus collisions

- proton-ion collisions?
- under debate!

## ePIC Collaboration

![](_page_44_Figure_1.jpeg)

![](_page_44_Picture_2.jpeg)

# Particle vs Nuclear Physics

- So how are nuclear and particle physics different?
  - Mostly in the questions we try to answer
- There is huge overlap in skills!
- You can be the next generation of physicists in either field!

![](_page_45_Figure_5.jpeg)

Programming

![](_page_45_Picture_6.jpeg)

#### **Knowledge of particles**

![](_page_45_Figure_12.jpeg)

**Particle Detectors** 

![](_page_45_Picture_14.jpeg)

![](_page_45_Picture_20.jpeg)

# Summary

- High energy nuclear physics studies the strong force
  - Tells us how nuclei and protons/neutrons are held together
- High-energy nucleus collisions create a hot quark-gluon plasma in the lab By studying the QGP we learn more about the strong force
- A new particle collider on US soil (EIC) will do nuclear physics You can be the next generation of physicists!
