Leading directions

- Classification of all NP mediators
- Most flavor irreps match onto a single well-defined linear combination of dimension-6 SMEFT operators
- These linear combinations are denoted as leading SMEFT directions
- Suitable for phenomenological analysis
- Main goal: estimate the lower bound on the mass scale for different irreps

Conclusions

- SMEFT is a powerful and robust EFT framework
- Connection between flavor symmetries and the SMEFT
- Landscape of dimension-6 operators
- Connection between the parameter landscape and UV
- Classification and phenomenological analysis of the UV mediators
- Inclusion of (modular) discrete flavor symmetries in the lepton sector
