## **Presentation "Theory of stellar nucleosynthesis at low-energy scales"**

*Tuesday 21 May 2024 17:30 (30 minutes)*

Abstract: "The evolution of the main-sequence stars is governed by the reaction rates of the nuclear processes that occur in their interiors. The talk will cover the topic of a low-energy stellar nucleosynthesis reactions in the systems composed of the non-degenerate matter, in which the Maxwell-Boltzmann distribution is valid. The reaction rates of the resonant and non-resonant reaction tuons will be discussed, as well as the key concepts behind the so-called R and S processes, responsible for the origin of heavy elements, which are created during the collapse of the stars."
