

Precise Standard-Model predictions for tri-boson

Mathieu PELLEN

University of Freiburg

Joint WG1+WG3 meeting on triple vector-boson production, COMETA COST action

5th of April 2024

Motivation

- Quartic gauge coupling (like in VBS)
→ Another test of the EWSB mechanism and SM

History

- NLO QCD \sim 2007 [Lazopoulos, Melnikov, Petriello; hep-ph/0703273]
+ EW \sim 2013 [Dao Thi, Le Duc, Weber; 1307.7403]
→ NLO QCD + NLO EW for ON-shell for all processes (see [Huss, Huston, Jones, MP; 2207.02122])

State of the art

- NLO QCD + NLO EW for OFF-shell for WWW
[Schönherr; 1806.00307], [Dittmaier, Knippen, Schwan; 1912.04117]
- NLO QCD + NLO EW for OFF-shell for $V\gamma\gamma$ [Greiner, Schönherr; 1710.11514]
- NLO QCD + NLO EW for OFF-shell for $WZ\gamma$ [Cheng, Wackerath; 2112.12052]
 only leptonic decays considered

Signature: W^+W^+jj ... golden channel for vector-boson scattering

→ Full NLO EW+QCD [Biedermann, Denner, MP; 1708.00268]

Signature: W^+W^+jj ... golden channel for vector-boson scattering

• EW process

• QCD process

→ Measurement by ATLAS [ATLAS; 2201.13045]

→ Investigation of EW corrections [Biedermann, Denner, MP; 1611.02951]

→ Full NLO QCD+EW + PS corrections using SHERPA

→ Typical phase space (inspired by [ATLAS; 2201.13045]):

$$\begin{aligned} p_{T,\ell^+} > 20 \text{ GeV} & \quad \text{and} \quad |y_{\ell^+}| < 2.5 \\ p_{T,j} > 20 \text{ GeV} & \quad \text{and} \quad |y_j| < 4.5 \\ m_{jj} < 160 \text{ GeV} & \quad \text{and} \quad |\Delta y_{jj}| < 1.5 \end{aligned}$$

$$40 \text{ GeV} < m_{\ell^+\ell^+} < 400 \text{ GeV}$$

→ Typical phase space (inspired by [ATLAS; 2201.13045]):

$$\begin{aligned}
 p_{T,\ell^+} > 20 \text{ GeV} & \quad \text{and} \quad |y_{\ell^+}| < 2.5 \\
 p_{T,j} > 20 \text{ GeV} & \quad \text{and} \quad |y_j| < 4.5 \\
 m_{jj} < 160 \text{ GeV} & \quad \text{and} \quad |\Delta y_{jj}| < 1.5
 \end{aligned}$$

$$40 \text{ GeV} < m_{\ell^+\ell^+} < 400 \text{ GeV}$$

$\mathcal{O}(\alpha^6)$	off-shell	on-shell	on-shell subprocess			
Process	$\mu^+\nu_\mu e^+\nu_e jj$	sum	$W^+W^+W^-$	W^+H	W^+Z	W^+W^+ VBS
$\sigma_{\text{LO}}[\text{fb}]$	0.7917	0.7738	0.4207	0.3265	$5 \cdot 10^{-7}$	0.0266
$\sigma/\sigma_{\text{LO}}^{\text{off-shell}}[\%]$	100	97.7	53.1	41.2	$7 \cdot 10^{-5}$	3.3

⚠ Large contribution from WH! ⚠ **preliminary**

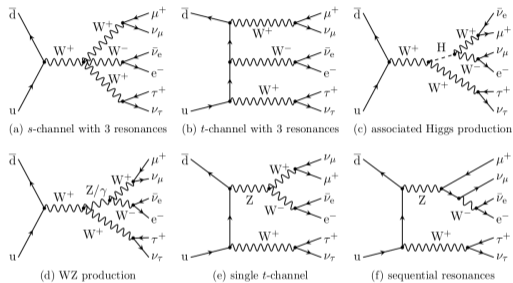

[Denner, MP, Schönherr, Schumann]  **preliminary**

[Denner, MP, Schönherr, Schumann]  **preliminary** → More complex picture with higher-orders

NLO QCD + EW to $pp \rightarrow e^- \bar{\nu}_e \mu^+ \nu_\mu \tau^+ \nu_\tau$ [Dittmaier, Knippen, Schwan; 1912.04117]

- Large cancellations between different corrections

- Triple pole approximation

→ Responsible diagram

→ Excellent approximation of full process where VH not relevant!

NLO QCD + EW to $pp \rightarrow e^+ \nu_e \mu^+ \mu^- \gamma$ [Cheng, Wackerth; 2112.12052]

- Off-shell effects, spin correlations, and non-resonance contributions **accounted**

σ_{LO} [fb]	σ_{QCD} [fb]	K -factor	σ_{EW} [fb]	δ_{EW} [%]	$\delta_{\text{EW}}^{q\bar{q}}$ [%]	$\delta_{\text{EW}}^{\gamma q(\bar{q})}$ [%]
0.20869(5)	$0.3588^{+3.90\%}_{-3.23\%}$ (2)	1.719(1)	0.2101(1)	0.97(1)	-3.99(4)	+4.96(1)

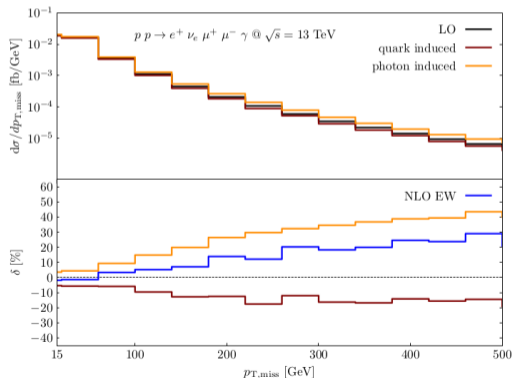

→ At NLO EW:

large cancellation between $q\bar{q}$ and photon-induced contributions

σ_{LO} [fb]	σ_{QCD} [fb]	K -factor	σ_{EW} [fb]	δ_{EW} [%]	$\delta_{\text{EW}}^{q\bar{q}}$ [%]	$\delta_{\text{EW}}^{\gamma q(\bar{q})}$ [%]
0.20869(5)	$0.3588^{+3.90\%}_{-3.23\%}$ (2)	1.719(1)	0.2101(1)	0.97(1)	-3.99(4)	+4.96(1)

→ At NLO EW:

large cancellation between $q\bar{q}$ and photon-induced contributions

Sudakov logarithms vs. photon-induced

→ Large effect of photon-induced contributions also in $pp \rightarrow W\gamma$

[Denner, Dittmaier, Hecht, Pasold; 1412.7421]

→ Effect due to hard-jet configurations
→ significantly reduced with jet veto
⚠ Important to be considered in experimental analysis

- Dim-8 operator in SMEFT:

$$\mathcal{O}_{M,5} = \left[(D_\mu \Phi)^\dagger \hat{W}_{\beta\nu} D^\nu \Phi \right] \times B^{\beta\mu}, \quad \mathcal{O}_{T,1} = \text{Tr} \left[\hat{W}_{\alpha\nu} \hat{W}^{\mu\beta} \right] \times \text{Tr} \left[\hat{W}_{\mu\beta} \hat{W}^{\alpha\nu} \right]$$

→ Missing EW corrections can mimic dim-8 operator ...
 ... if looking at single distributions

Recent computations:

- $pp \rightarrow WWW$ with hadronic decays [Denner, MP, Schönherr, Schumann; to appear]
- $pp \rightarrow WWW$ with leptonic decays [Dittmaier, Knippen, Schwan; 1912.04117]
- $pp \rightarrow WZ\gamma$ [Cheng, Wackerath; 2112.12052]

Recent computations:

- $pp \rightarrow WWW$ with hadronic decays [Denner, MP, Schönherr, Schumann; to appear]
 - $pp \rightarrow WWW$ with leptonic decays [Dittmaier, Knippen, Schwan; 1912.04117]
 - $pp \rightarrow WZ\gamma$ [Cheng, Wackerath; 2112.12052]
-
- Decisive information for SM tests
 - Precision programme at the LHC
 - Crucial interplay between theory and experiment
 - Big impact on physics results
