Caribou: A versatile data acquisition system for silicon pixel detector prototyping

Friday 21 June 2024 09:00 (20 minutes)

Caribou is a versatile data acquisition system used in multiple collaborative frameworks (CERN EP R&D, DRD3, AIDAinnova) for both bench-top and test-beam qualification of novel silicon pixel detector prototypes. The system is built around a common hardware, firmware and software base shared accross different projects, thereby drastically reducing the development effort and cost. The current version consists of a custom Control and Readout (CaR) board and a commercial Xilinx Zynq 7000 series Sytem-on-Chip (SoC) platform. The CaR board provides a hardware environment featuring various services such as powering, slow-control and high-speed data links that can be used by the target detector prototype. The SoC platform is based on a ZC706 evaluation board running a fully featured Yocto-based Linux distribution (Poky) and a custom data acquisition software (Peary). Migration to a Zynq UltraScale+ architecture is ongoing with the additional objective of merging the SoC and the CaR board into a single hardware platform. This talk describes the current Caribou system architecture, its capabilities, examples of projects where it is used, and the foreseen system upgrade.

Type of presentation (in-person/online)

in-person presentation

Type of presentation (scientific results or project proposal)

Presentation on scientific results

Authors: DANNHEIM, Dominik (CERN); BUSCHMANN, Eric (Brookhaven National Laboratory (US)); CHEN, Hucheng (Brookhaven National Laboratory (US)); BENOIT, Mathieu (Oak Ridge National Laboratory (ORNL)); TANG, Shaochun (Brookhaven National Laboratory (US)); SPANNAGEL, Simon (Deutsches Elektronen-Synchrotron (DE)); VANAT, Tomas (Deutsches Elektronen-Synchrotron (DE)); OTARID, Younes (CERN)

Presenter: OTARID, Younes (CERN)

Session Classification: WG5 - Characterization techniques, facilities
