

Rayquant: Innovating Photon Detection: Latest Developments in Rayquant's CMOS SiPM for Low-Light Detection Applications.

Wednesday 20 November 2024 18:02 (20 minutes)

Rayquant Technology Co., Ltd. is a high-tech enterprise specializing in single-photon detection and ultra-low-light imaging technology. The company is dedicated to delivering high-performance photon detection and single-photon imaging chips, modules, and systems, alongside comprehensive technical services and solutions for low-light detection applications. Through continuous technological innovation, Rayquant's high-performance SiPM chips have been widely applied in areas such as PET/CT medical imaging, fluorescence detection, security systems, high-energy physics, and environmental monitoring. This presentation will showcase the latest advancements in Rayquant's CMOS SiPM product development.
