

Upgrade II studies: RICH simulation using MCPs

Sajan Easo¹ and Lais Lavra²

¹ Science and Technology Facilities Council STFC

² The University of Edinburgh

Introduction

- Implementation of MCPs features in the current simulation framework for [Upgrade II studies](#)

- Geometry description based on DD4HEP framework
- Simulation software: Gauss + Gaussino

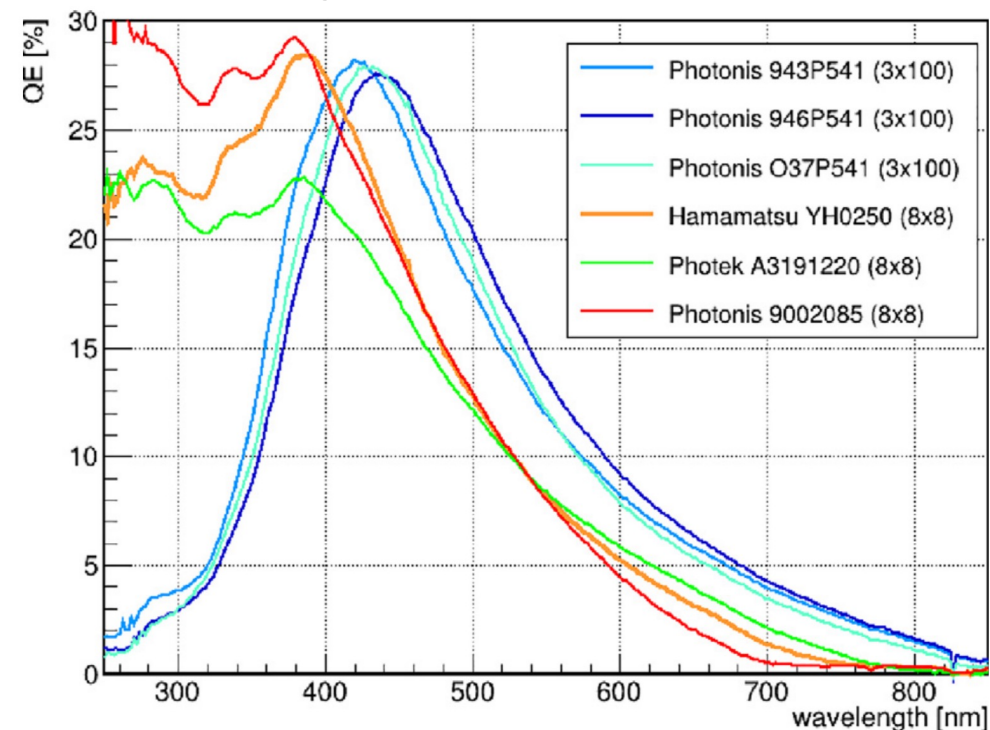

- Events generated with Particle Gun (10k events)

- Geometry versions for [Run5](#)

- (a) RICH_Run5_v3: upgraded geometry for Run 5 (only RICH1 optics) as in FTDR, SiPMs as photon detector (Sajan) + **MCPs as photon detector**
 - (b) RICH_Run5_v4: nominal Run 3 geometry, SiPMs as photon detector (Sajan) + **MCPs as photon detector**
- (c) RICH_Run5_v5: RICH+ TORCH studies

- Resolution and yields estimates

QE of different MCP-PMTs

Thierry's [presentation](#)
[NIMA 1049 \(2023\) 168047](#)

Comparison of Photon detectors

3 PDE evaluated

- MCP Photonis 943P541 (blue curve)
- MCP Photonis 9002085 (green curve)
- LAPPD126 (yellow curve)

Geometry

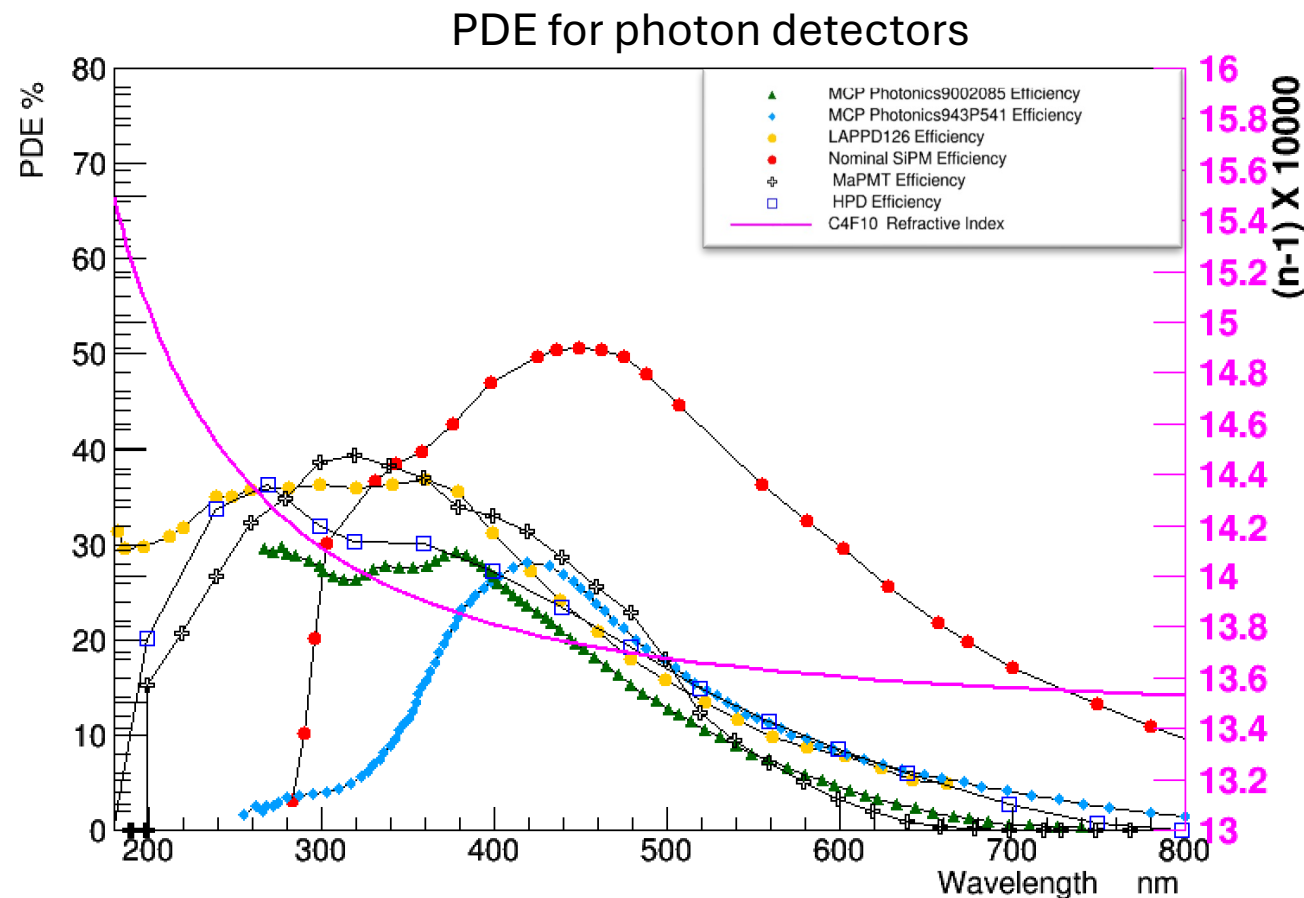

- Run 3 geometry
- Upgraded geometry for Run 5 (FTDR)

MCPs as photon detector

- Each MaPMT volume is repurposed to use as MCP
- 1 mm pixel size (plan to change the pixel sizes)

Wavelength cuts :

- 180 nm (no wavelength cut)
- 300 nm
- 400 nm (for **MCP Photonis 9002085** only)

Run 3 Geometry RICH1

Run3 Geo - NO wavelength cut-off

RICH 1 with Photonis 943P541 (blue curve)

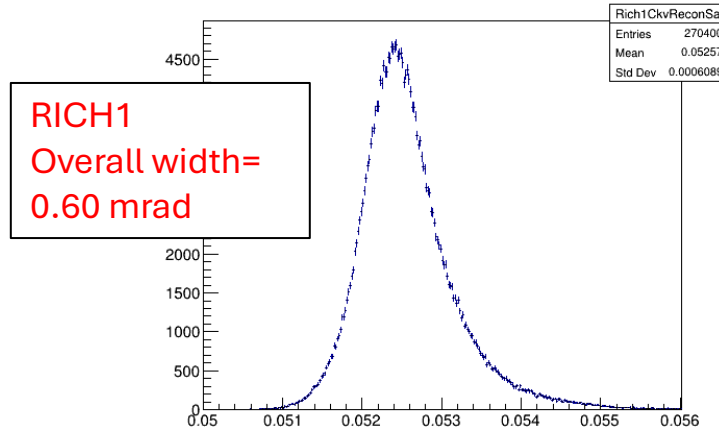

Resolutions

Yields

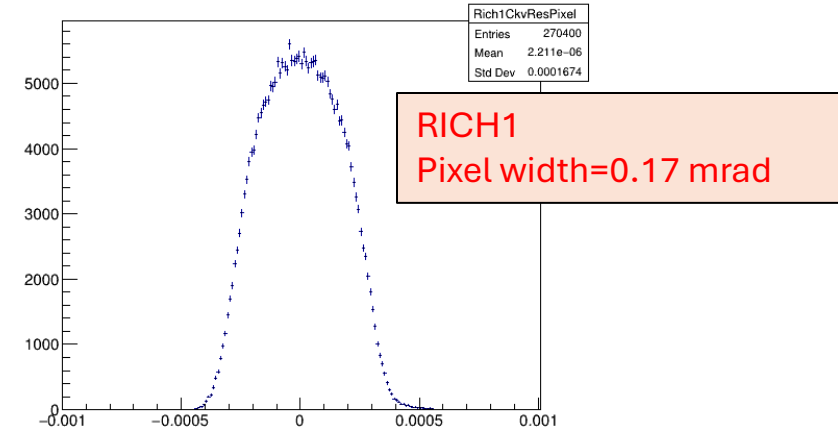

RICH1 photo-electron yield

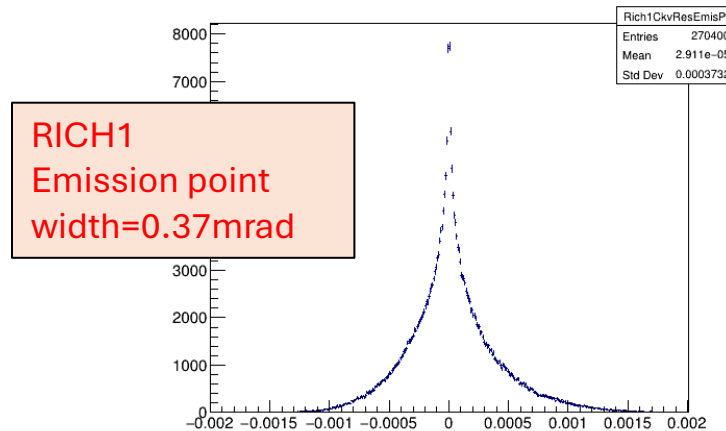

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run3 Geo - NO wavelength cut-off

RICH 1 with LAPPD126 (yellow curve)

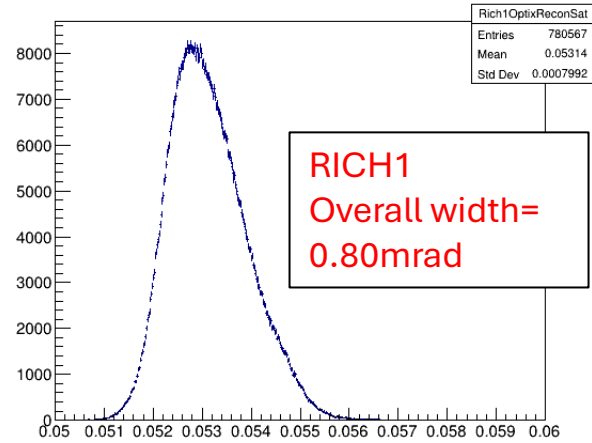

RICH1 photo-electron yield

RICH1 Yield = 78

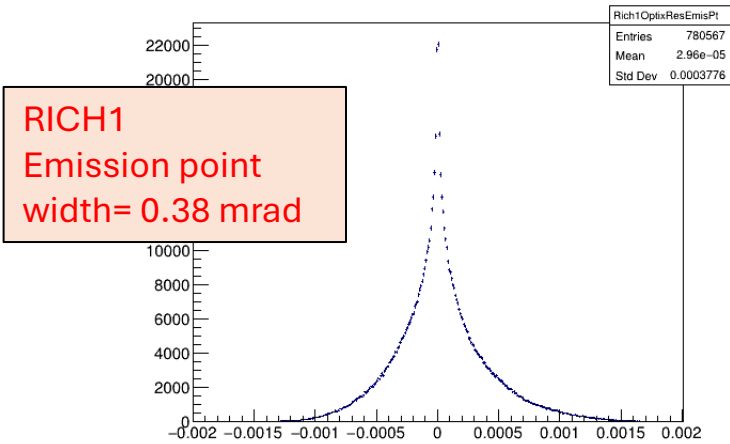

Reconstructed Cherenkov angle from RICH1 for saturated tracks

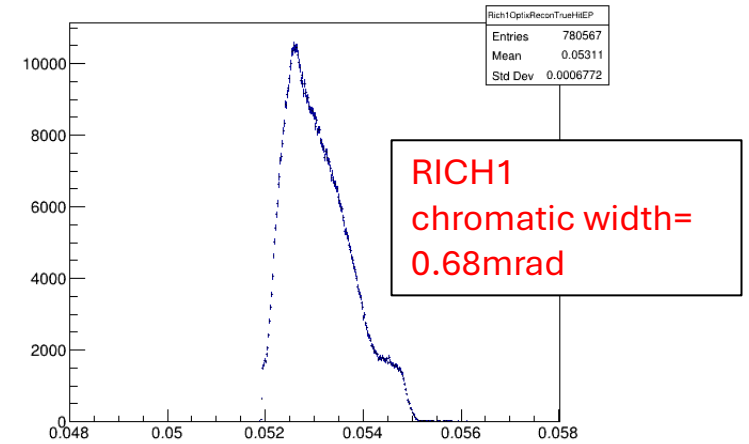

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

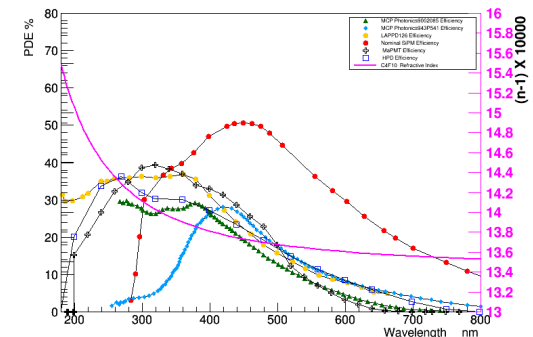

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

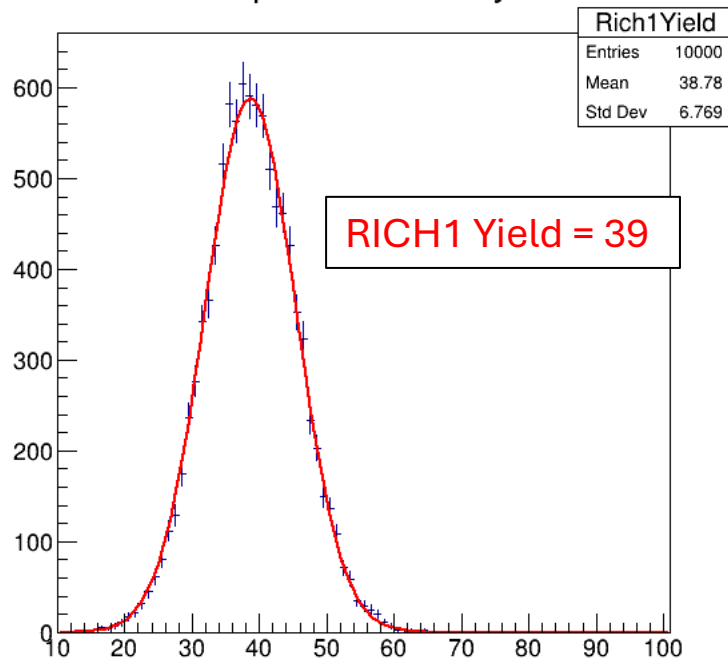

Run3 Geo – 300nm wavelength cut-off

RICH 1 with LAPPD126 (yellow curve)

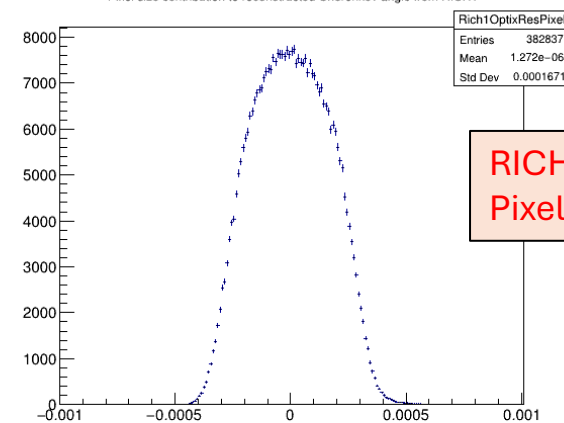

RICH1 photo-electron yield

Reconstructed Cherenkov angle from RICH1 for saturated tracks

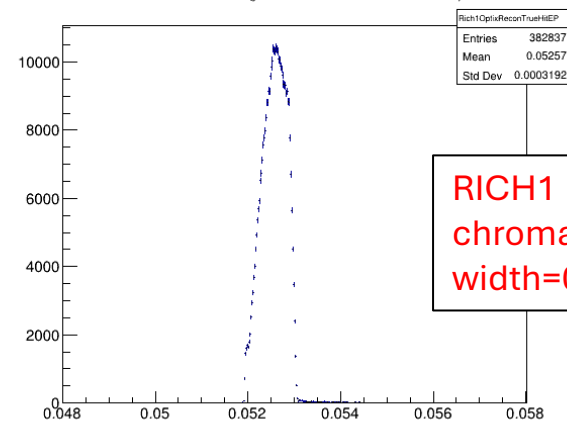

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run 3 Geometry RICH2

Run3 Geo - NO wavelength cut-off

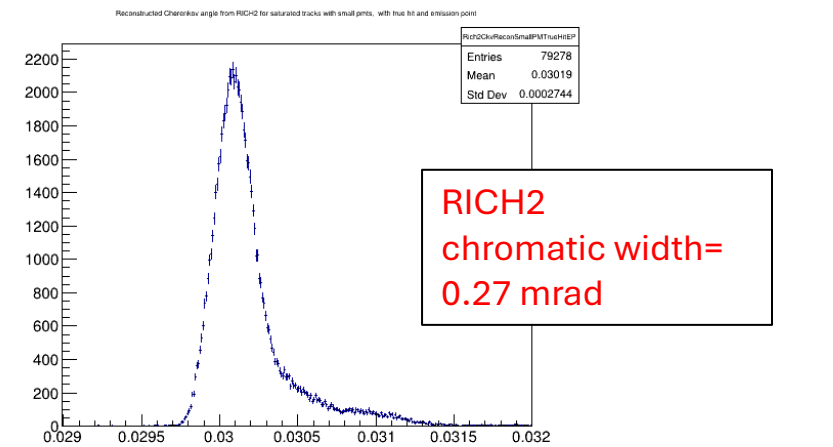

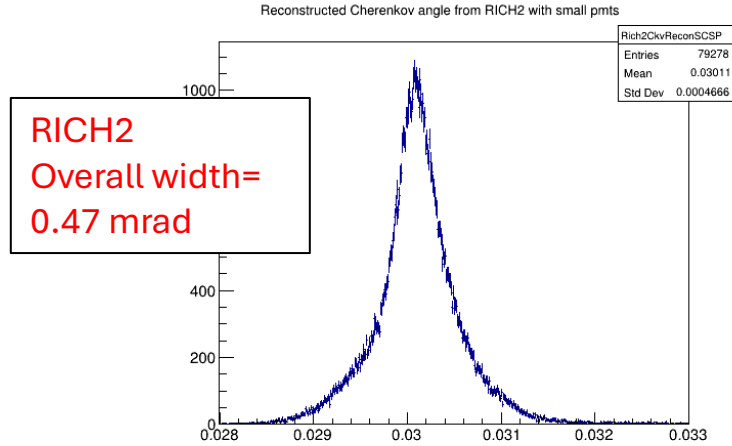

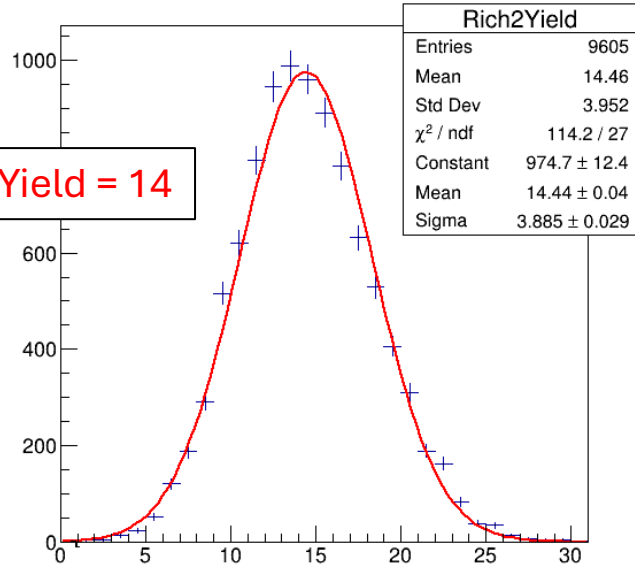

RICH2 with Photonis 943P541 (blue curve)

Resolutions

Yields

RICH2 photo-electron yield

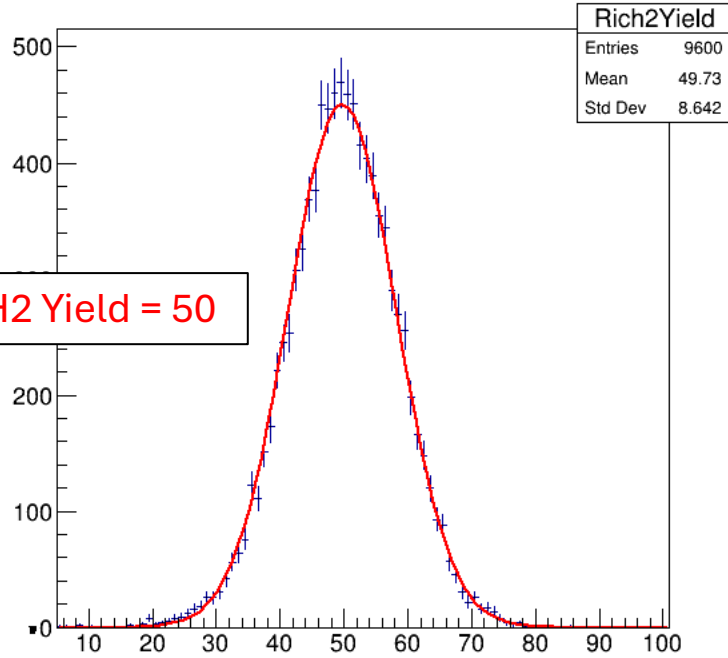

Run3 Geo - NO wavelength cut-off

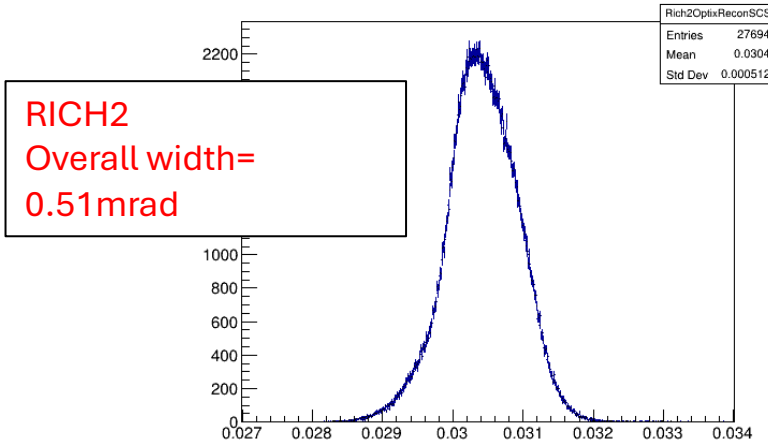

RICH 2 with LAPPD126 (yellow curve)

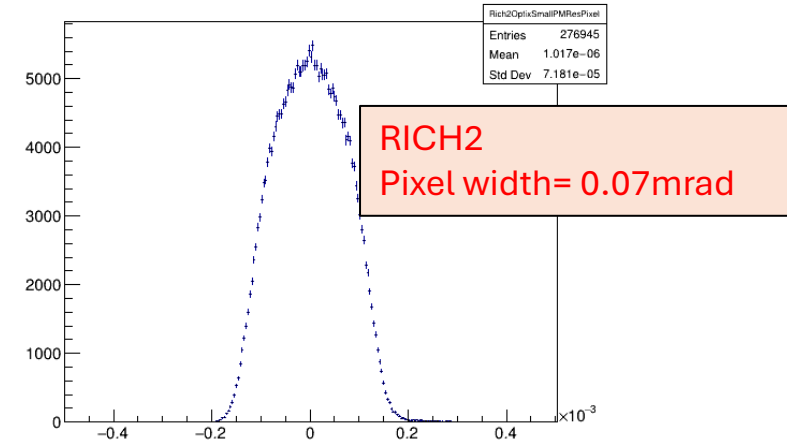

RICH2 photo-electron yield

Reconstructed Cherenkov angle from RICH2 with small pmts

Pixel size contribution to resolution from RICH2 with small pmts

Emission Point contribution to resolution from RICH2 with small pmts

Reconstructed Cherenkov angle from RICH2 for saturated tracks with small pmts, with true hit and emission point

Upgraded Geometry (FTDR) RICH1

Run5 Geo - NO wavelength cut-off

RICH 1 with Photonis 943P541 (blue curve)

Yields

RICH1 photo-electron yield

Rich1Yield	
Entries	10000
Mean	22.92
Std Dev	5.663

RICH1 Yield = 23

Resolutions

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov angle

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run5 Geo - NO wavelength cut-off

RICH 1 with LAPPD126 (yellow curve)

RICH1 photo-electron yield

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

180nm	0.46	0.29	37
300nm	0.40	0.19	33
400nm	0.38	0.09	16

Summary

Preliminary results: MCP comparison in simulation

- Geometry: FTDR, Run 3
- Wavelength cut-off: 180nm, 300nm
- 1mm pixel size

Next Steps:

- Change pixel size
- Use Pythia

BACKUP SLIDES

Run 3 Geometry RICH1

Run3 Geo - NO wavelength cut-off

RICH1 with Photonis 9002085 (green curve)

RICH1 photo-electron yield

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run3 Geo – 300nm wavelength cut-off

RICH 1 with Photonis 9002085 (green curve)

RICH1 photo-electron yield

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run3 Geo – 300nm wavelength cut-off

RICH 1 with Photonis 943P541 (blue curve)

RICH1 photo-electron yield

Reconstructed Cherenkov angle from RICH1 for saturated tracks

Pixel size contribution to reconstructed Cherenkov angle from RICH1

Emission point contribution to the Cherenkov angle resolution from RICH1

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

Run3 Geo – 400nm wavelength cut-off

RICH1 with Photonis 943P541 (blue curve)

RICH1 photo-electron yield

RICH1 Yield = 16

Reconstructed Cherenkov angle from RICH1 for saturated tracks

RICH1 Overall width = 0.46 mrad

Pixel size contribution to reconstructed Cherenkov angle

RICH1 Pixel width = 0.17 mrad

Emission point contribution to the Cherenkov angle resolution from RICH1

RICH1 Emission point width = 0.37 mrad

Reconstructed Cherenkov angle from RICH1 with true hit and emission point

RICH1 chromatic width = 0.18 mrad

Run 3 Geometry RICH2

Run3 Geo - NO wavelength cut-off

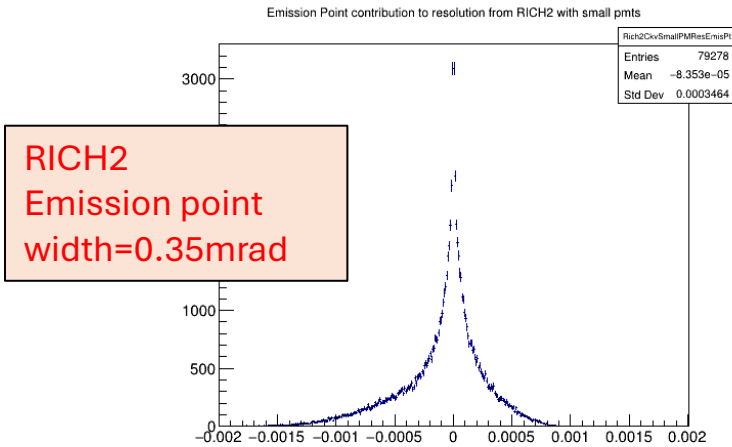

RICH2 with Photonis 943P541 (blue curve)

Resolutions

Yields

RICH2 photo-electron yield

Run3 Geo – 300nm wavelength cut-off
