

Creating high-quality, durable, efficient code: the software development workflow

Tuesday, 25 June 2024 16:55 (25 minutes)

Writing code is a skill many possess, but creating high-quality, durable, and efficient code is an art. Would you like to master this art?

In this talk, we will explore the importance of having a well-defined development workflow and how to implement it to ensure each project's success. We will discuss key topics such as Scrum methodologies, software project management, automated testing and quality control, the relevance of accurate documentation, and strategies to promote continuous improvement within the team.

Presenter: DE BLASI, Gabriele

Session Classification: Project Management Methodologies and Tools
