

# Björn Grüning

Galaxy Europe/University of Freiburg, Germany

## Biography

Björn Grüning is a bioinformatician and researcher renowned for his significant contributions to the field of computational biology and bioinformatics. As a core developer and advocate for open science, he has played a pivotal role in the development and dissemination of the Galaxy Project, an open platform for data-intensive research. His work primarily focuses on creating accessible and reproducible computational tools and workflows for the scientific community. Björn holds a position at the Albert-Ludwigs-Universität Freiburg, where he is part of the Freiburg Galaxy Team. His research interests encompass a wide array of bioinformatics applications, including genomics, cheminformatics, and machine learning. He is particularly dedicated to the integration of diverse computational tools and resources to enhance research efficiency and collaboration. Björn is an active member of the global bioinformatics community, frequently contributing to conferences, workshops, and collaborative projects. Björn is involved in the Galaxy Training Network aimed at empowering researchers with the skills and knowledge needed to utilize advanced computational tools effectively.
