

Ivar Janmaat

Manager SURF Research Cloud at SURF

Biography

Focused on providing a secure, innovative platform that lets researchers excel without IT complexities. SURF Research Cloud helps shape or enhance institutional-level research IT strategies, making research easier for both scientists and university leadership. My team and I ensure seamless interoperability across the European research ecosystem and strive to secure funding for the innovations that will advance research as a whole.

Over the past five years, our community-driven approach has significantly enhanced productivity and collaboration among Dutch and international academic institutions. Many Dutch universities and research institutes now use SRC as their primary platform for collaborative research. We've created a dependable digital research environment where setup is quick, and integration with other SURF services is seamless.

SURF Research Cloud and HPC Cloud services are used in multiple projects at SURF. This includes projects like the Secure ANalysis Environment (SANE), Social Science and Humanities Open Cloud (SSHOC-NL) and E-Ecology. Together with GEANT, Elixir, NEN (CEN/CENELEC) we are eager to work on international standards for data and cloud interoperability which comply with the regulations provided in the EU Data Act.
