Review of the safety concept - pre-TDR roadmap

Thursday 22 May 2025 10:30 (18 minutes)

In view of the FCC feasibility study, the Safety WP was tasked with the editorial of a full Safety Concept, which was recently published in Volume 2 of the Feasibility Study report. The outcome of the safety concept leans on the results from several safety studies and the implementation of safety-relevant systems which are designed and proposed by other WPs in the Technical Infrastructure Pillar.

The review bodies of the study requested an external review of the safety concept, which was performed in the beginning of 2025.

This presentation will focus on the outcome of the external review and identify / prioritise the tasks and milestones for the pre-TDR phase, in view of consolidating the concept.
