Public participation in France and Switzerland in the FCC study

Tuesday 20 May 2025 14:10 (20 minutes)

This presentation offers a feedback on the public participation approaches implemented as part of the feasibility study for the Future Circular Collider (FCC) in France and Switzerland. It will present the tools and methods used on both sides of the border to inform and engage citizens and local stakeholders. The presentation will highlight the differences in institutional and cultural frameworks between the two countries, as well as the broader European context of participation around a large-scale international scientific project. It will also provide the timeline for upcoming citizen participation initiatives and outline their role in contributing to and enriching the FCC studies.
