

VPC migration

- All BE-CSS VPC running CentOS 7 will be shut down on the 20th of June at the latest.
 - In exceptional cases, it is possible to keep CentOS 7 for the time being.
- RHEL9 VPCs do not allow NFS access through `/nfs/cwe-513-xxx/opt`
 - This is for security reasons.
 - If you need this feature, contact the system administrators to modify this behaviour for your VPC.
 - You can also use your NFS home `/user/<login>` instead
- All the development and diagnostic tools should work on RHEL9.

FESA news

- FESA 8.5.0 was released
 - GCC 11 on CentOS 7 can be used with this version
 - <https://confluence.cern.ch/display/FESA3/Use+modern+GCC+toolchains+on+CentOS+7>
- FESA plug-in distribution will change
 - It will not be installed by default anymore (SDC license expiring)
 - It can be installed and updated manually in a few steps
 - <https://confluence.cern.ch/display/DVTL5/Eclipse+IDE#EclipseIDE-EclipseforFESA>
 - If possible, we'll provide a script to install it automatically.
