

From the infinitely *big* to the infinitely *small*

*A journey into the microscopic in the quest for the elusive substance that makes up most of the matter in our universe: **dark matter***

5 June 2024 7:30 pm
All Hallows School,
150 Eccles Old Rd.
M6 8AA

The main speaker, **Dr Louie Corpe** is a British lecturer in experimental particle physics at Université Clermont Auvergne in France. He works on the ATLAS experiment of CERN's Large Hadron Collider, looking for hints of exotic new particles, including dark matter.

The event will be hosted and moderated by

Gareth Lever,
director of the
Salford Astronomical Society

Caterina Doglioni,
professor of particle physics at the
University of Manchester

We will also host a Q&A with international PhD students in particle physics visiting the University of Manchester, so if you're a student thinking about a career in physics you can ask your questions about how to get into research!

Event organised and sponsored by
