Evolution

2000 : EPPOG Meetings soon converged on 2 days (Friday/Saturday)

- Reports from CERN, national representatives, LHC experiments

- Sessions on exhibits and "links with education"

2011 : General move to 3 days with the creation of IPPOG (Thursday to Saturday)

- Additional "working groups", "discussion groups" and "panels topics" extensive slots during the week, with a report session in the end.

2017 : Creation and growth of the collaboration - A CB is added on Saturday lunch time (!)

- Success stories appear in 2019, starting with ~ 3 or 4 but growing, in 2022, up to 17 !

- Only "reports" from the working groups are left, they are supposed to meet in between

- The Saturday bit is removed, meetings are Wednesday-Friday

Feedback Received

- Working Groups need some of their space back, if we want to "network", we need discussion time.

- We need to share better what IPPOG is up to. For example, success stories are of general interest and should/could be shared more widely

- Contributors to Working Groups are not all in the Forum. Partners are not in the Forum… We need some discussions time "between us", but also with them.

- The current 3 days are… packed.

What would 4 days look like ?
