

## Facility visit (optional)

*Thursday 7 November 2024 14:15 (1h 30m)*

Two options:

- see the Proton synchrotron halls (interesting, nearly 70-year old technical architecture) and the second-smallest synchrotron at CERN, the Low-energy ion ring.
- or see the new underground facilities of High-Luminosity LHC, but unfortunately no accelerator (the LHC is running and therefore inaccessible).
