

## Studies of hadron spectroscopy at Belle and Belle II

The Belle and Belle II experiments have collected a  $1.6 \text{ ab}^{-1}$  sample of  $e^+e^-$  collision data at centre-of-mass energies near the  $\Upsilon(nS)$  resonances. These data include a  $19.2 \text{ fb}^{-1}$  sample of data collected at centre-of-mass energies near the  $\Upsilon(10753)$  resonance. We present several scan results including  $e^+e^- \rightarrow \Upsilon(nS)\eta$ . In addition, we present a measurement of the  $B^0$  and  $B^+$  meson mass difference.
