

UHECR observation from space: perspectives for next-generation experiments.

Thursday 21 June 2007 16:15 (25 minutes)

After the Pierre Auger Observatory, it is likely that space-based experiments will be required for next-generation studies of Ultra-High Energy Cosmic Particles. An overview of this challenging task is presented, emphasizing the path and the intermediate steps required to make this perspective a reality.

Presenter: PETROLINI, Alessandro (University of Genova and INFN, Italy)

Session Classification: Plenary Session: UHE Cosmic Rays Detection
