LHCb Data & Analysis Preservation

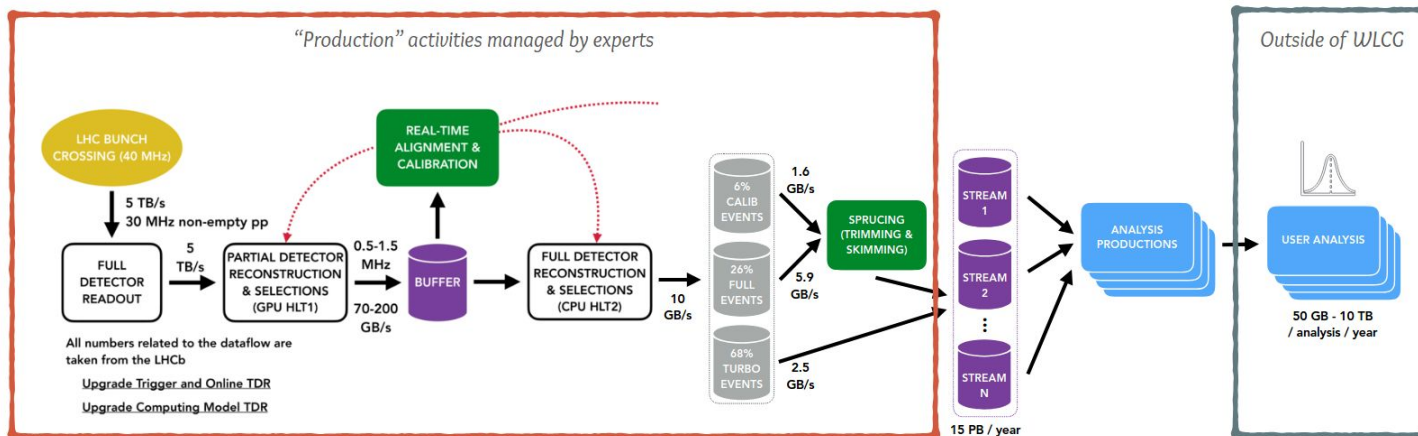

Analysis Productions

Analysis productions provides a central way of producing Ntuples from DSTs

- Preserves a provenance trace from centrally produced DSTs → user Ntuples for analysis
- Includes tool **apd** (analysis **p**roductions **d**ata) for tagging datasets and facilitating data queries based on meaningful tags

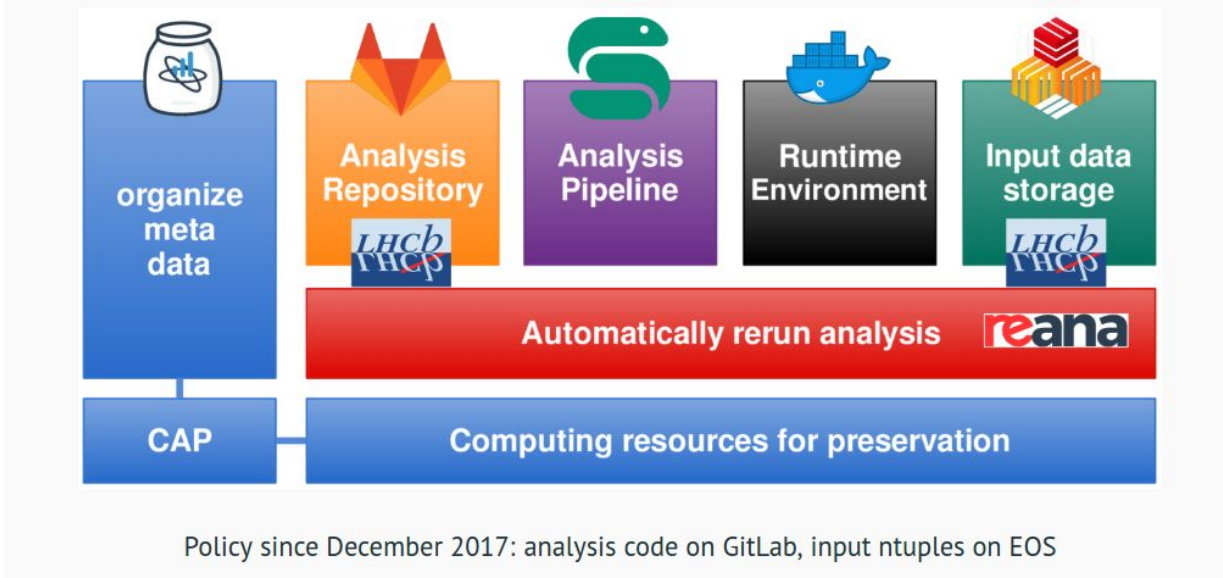

More details

- Analysis Productions ([CHEP 2023 presentation](#))
- apd ([CHEP 2023 presentation](#), [CHEP 2023 proceedings](#))

LHCb Analysis Preservation Schematic

From the LHCb Analysis Roadmap (2017)

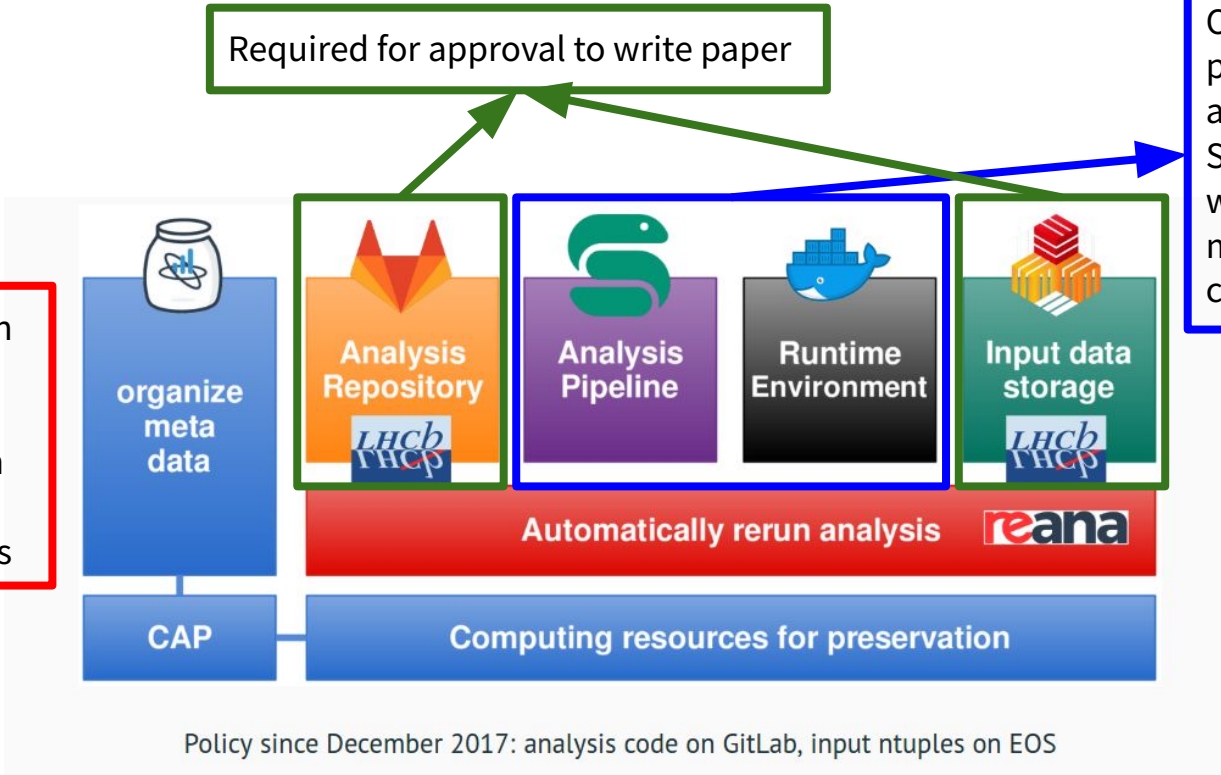

LHCb Analysis Preservation Schematic

The rest is a work in progress and will require more resource allocation to analysis preservation efforts

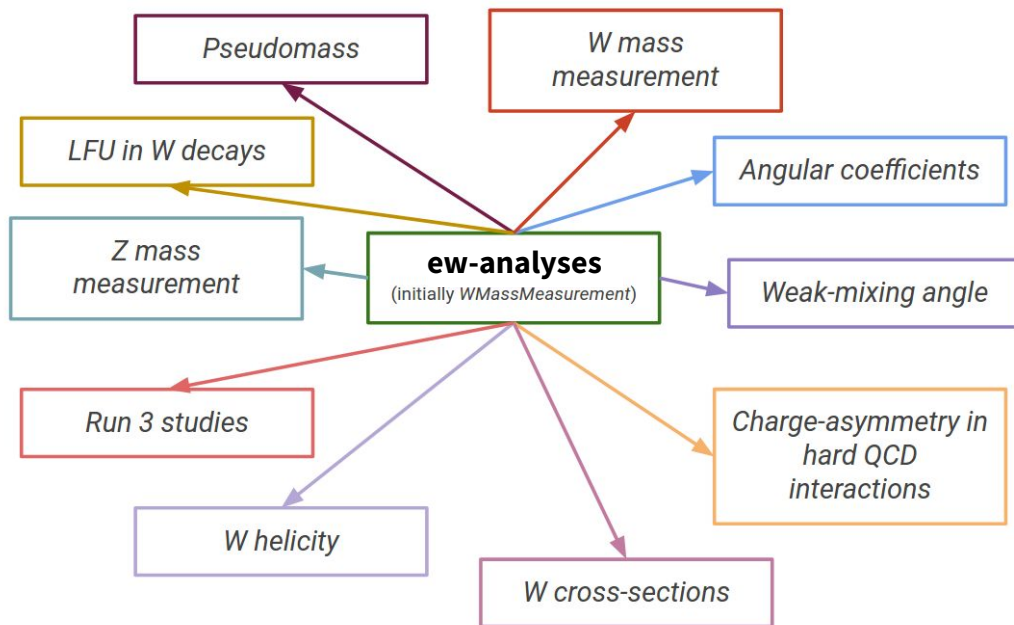

Required for approval to write paper

Often used in practice by analyzers!
Snakemake is the workflow management tool of choice at LHCb.

LHCb Analysis Preservation in Action!

Shared repository for electroweak analyses -- excellent example of LHCb analysis preservation best practices

Born from the W mass measurement

- Naturally evolved into an ecosystem to host related measurements and ensure reproducibility
- Naturally converged on recommended practices for LHCb analysis preservation!

[News](#) › [News](#) › Topic: Knowledge sharing

LHCb releases first set of data to the public

The LHCb collaboration has released data from Run 1 of the LHC to the public for the first time, allowing research to be conducted by anyone in the world

8 DECEMBER, 2022 | By LHCb collaboration

LHCb Event Display

Related Articles

<https://home.cern/news/news/knowledge-sharing/lhcb-releases-first-set-data-public>

LHCb releases the entire Run I dataset

LHCb Collaboration

News

Date of publication: 2023-12-20

Today the LHCb collaboration completes the release of the data collected throughout the Run I of the Large Hadron Collider at CERN. The sample made available amounts to approximately 800 terabytes (TB) of data. These data, collected by the LHCb experiment in 2011 and 2012, contains information obtained from proton-proton collisions. The format made available provides pre-filtered data, suitable for a wide range of physics studies. The image below displays an event recorded during 2012.

<https://opendata.cern.ch/docs/lhcb-releases-entire-run1-dataset>

LHCb Open Data

LHCb recently released all of the Run 1 data (~1 PB) on the CERN Open Data Portal:

<https://opendata.cern.ch/search?page=1&size=20&experiment=LHCb>

Releases for Run 2 and beyond will be challenging due to the volume of data...

	ALICE	ATLAS	CMS	LHCb
Run-2	2 PB	0.5 PB	2 PB	10 PB (including Run-1)
Run-3	4 PB	1 PB	4 PB	45 PB
Total	6 PB	1.5 PB	6 PB	55 PB

This is not scalable! This prompted the development of a new system...

The LHCb Ntuple Wizard

Previous presentations

- [CHEP 2023](#): Presented idea and mature prototype (screenshots) publicly

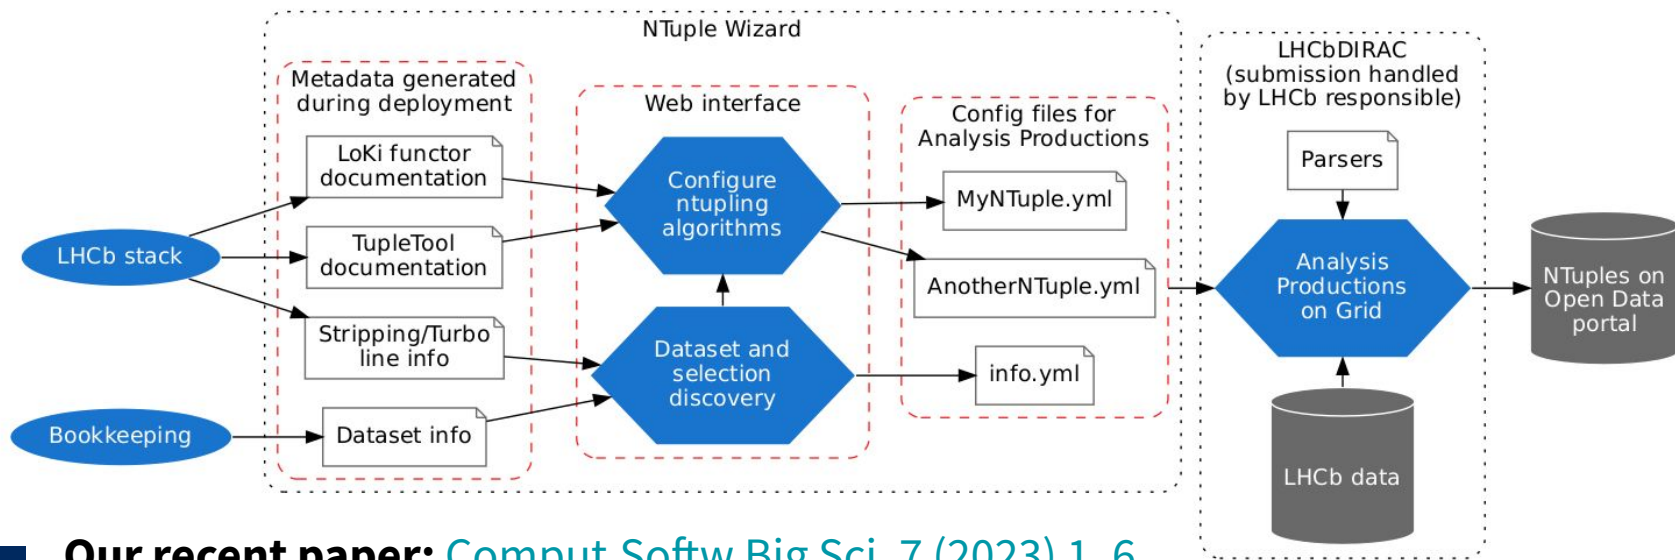

LHCb Run 1 and 2 Data Flow

- The Ntuple Wizard handles the Ntuple Making step, which typically requires knowledge of LHCb specific software
 - **Lower barrier of entry for external analysts!**
 - **Convenient means of navigating available datasets and documentation for internal analysts!**

The Ntuple Wizard

- Intuitive web interface (wizard) guides the user through formulating a query, key features include:
 - Dataset discovery/selection
 - Ntuple configuration
- Input (metadata/documentation) and output (configuration files from user) have secure design features

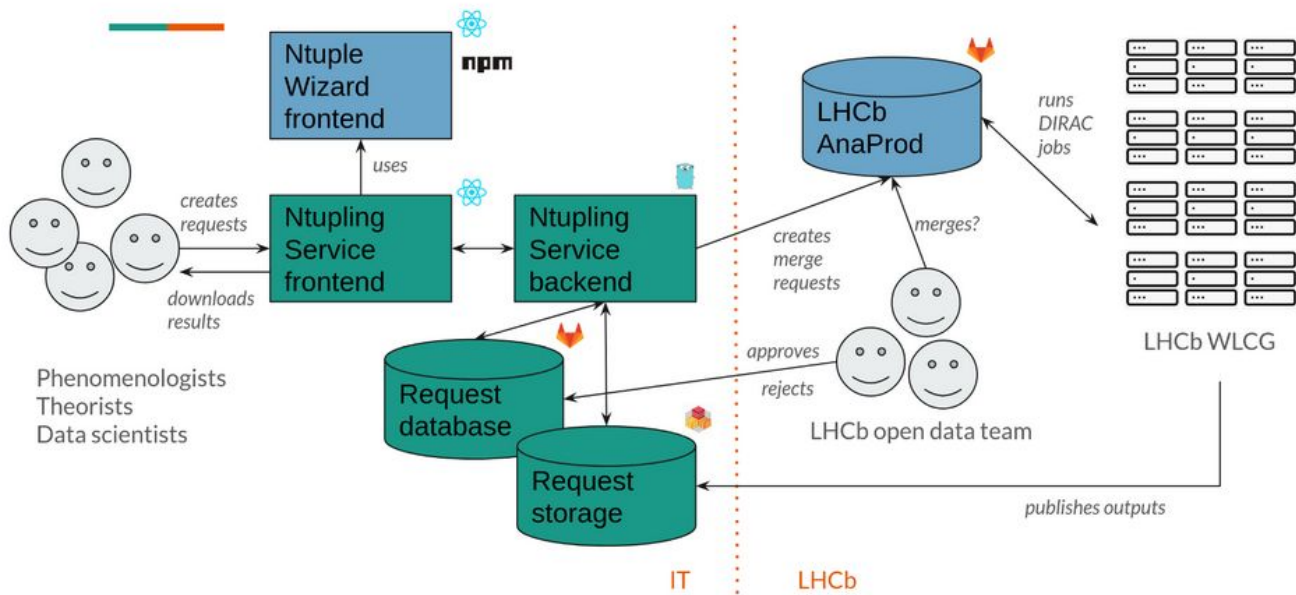

Our recent paper: [Comput.Softw.Big Sci. 7 \(2023\) 1, 6](#)

The LHCb Ntupling Service

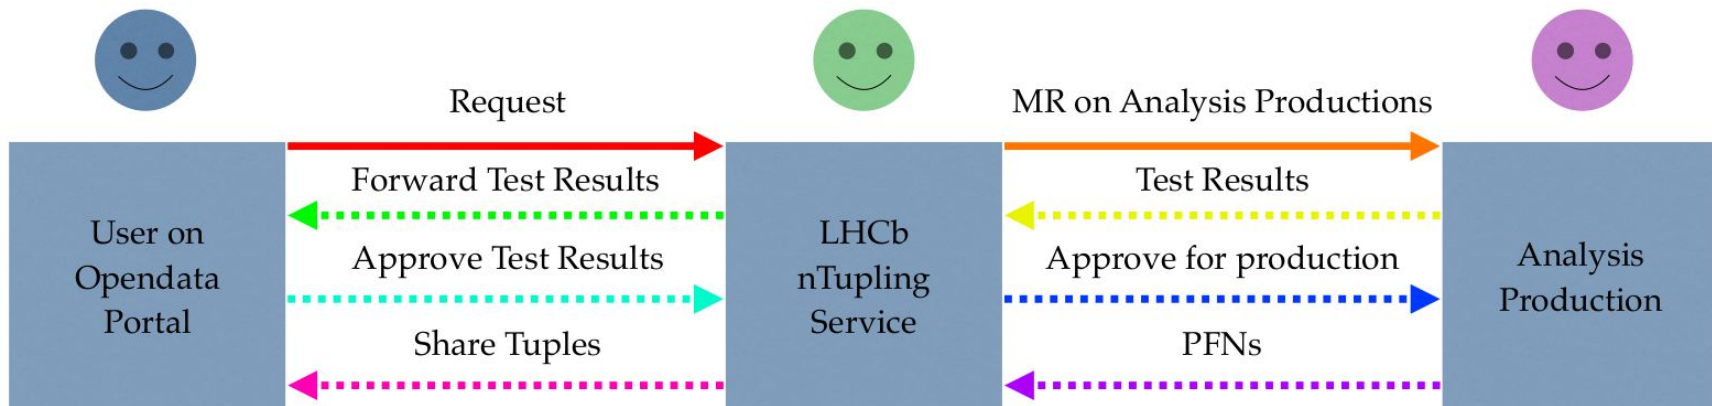

The LHCb Ntuple Wizard has been integrated with the CERN Open Data Portal and the LHCb Analysis Productions batch processing system thanks to the help of the Open Data team from CERN IT. The combined application is called the LHCb Ntupling Service.

- See upcoming talk at [CHEP 2024](#) for more details!

Request Workflow

The LHCb Ntupling Service

Request

- A request can be made on the LHCb Ntupling Service, to be accessible from the [CERN Open Data Portal](#) for the public release
- Create custom Ntuples!
 - Choose from available decays, and data streams
 - Configure your own Ntuple -- Add and customize tools specifying quantities written to output
- Submitting a request will open an issue on GitLab
 - Users will be regularly informed when stages of the production process change

LHCb Open Data Ntupling Service

Approval for Test Production by LHCb Open Data Team

- LHCb reviews and approves requests manually
- Approval triggers a draft merge request (MR) in [Analysis Productions](#)
 - This triggers a test production via the Analysis Productions pipeline -- metrics from the output are routed to the user
- Merge request left on draft until user confirms results of test production

Ntupling Service Request | B_Dpi | dillon.fitzgerald@cern.ch

● Open ⌵ Issue created 5 minutes ago by CERN Open Data DEV

Requester

- Name: Dillon Fitzgerald
- Email: dillon.fitzgerald@cern.ch
- Field of research: Physics (experimental)
- Position: Graduate student
- Experiment: LHCb
- Remarks: Testing the system

Request Details

- Production name: B_Dpi
- Reason for request: I am testing the system and getting some example screenshots!

Instructions

- See production configuration files for this request here: [164 \(diffs\)](#)
- React to a comment with the 📧 (mailbox) emoji to publish a comment to the requester

Return Test Results to User for Verification

- From the test production output, a markdown file is provided to the user with information about the production
- The user can verify the test results at this stage
 - Are all expected branches present in the Ntuple?
 - Is the estimated output size within a feasible range?
- After user approval, the merge request on Analysis Productions is marked as ready

test-production.md

Welcome to the LHCb Open Data service!

Congratulations! Your request has been approved by the LHCb Open Data Team and submitted to the LHCb Analysis Productions service!

The internal testing system has been successfully completed, creating a small test sample.

Please take a moment to assess the test statistic below and consider the following:

1. Is the estimated output size within a feasible range for you?
2. Do all expected variables exist in the ROOT file?

If the test statistic fulfills the above criteria and you are satisfied with the results, please confirm your request here.

Next Steps:

- Once you confirm you are satisfied with the test result, the LHCb Open Data Team will send the request to full production
- You will be notified once the production is finished. The ROOT files are then transferred to the Open Data Portal.
- You can then access the data freely. Have fun on your Analysis!

Thank you for your patience. If you have further questions or concerns, please feel free to reach out by leaving a comment on your request, by sending an email to opendata-support@cern.ch or by opening a ticket on the [Opendata Data Forum](#).

B_3Ps1k will process 135.6TB of data and create about 17.8GB across 6 samples. Please note that the actual size of the output files may vary from the estimate.

Alpha Release → Beta Release

The LHCb Ntuple Wizard & Ntupling Service were officially released to the LHCb collaboration in February (alpha release)

- The goal was to get useful feedback from collaborators before opening more broadly to some affiliated theorists for the beta release.

The beta release will proceed at the [First LHCb Open Data and Ntuple Wizard Workshop](#) on 22 October, 2024

First LHCb Open Data and Ntuple Wizard Workshop

Tuesday 22 Oct 2024, 13:00 → 18:00 Europe/Zurich

160/1-009 (CERN)

Dillon Fitzgerald (University of Michigan (US)), Eduardo Rodrigues (University of Liverpool (GB))

Description At this first LHCb Open Data and Ntuple Wizard Workshop, the innovative application for analyzing LHCb open data, the [LHCb Ntuple Wizard](#), will be presented. Attendees will have the opportunity to participate in the beta release of the application and learn how to use LHCb open data for their own analyses.

Contact ✉ lhcb-odnw2024-organisation@cern.ch

Summary

- Many ongoing activities related to analysis preservation and open data at LHCb
- Analysis Preservation
 - Analysis preservation best practices being adopted by many analysts
- Open Data
 - Full Run 1 dataset released to the CERN Open Data Portal in December 2023
 - Novel application for Ntuple creation from LHCb data using a web interface is in the mature stages of development -- the [LHCb Ntuple Wizard](#) & Ntupling Service
 - Access to run 2 data!
 - Beta release planned for 22 October, 2024, at the [First LHCb Open Data and Ntuple Wizard Workshop](#)

Analysis Life Cycle Management Tool (ALCM)

ALCM is a database tool

- Organization of the review workflow
 - Workflow tracker connected to membership database
- Store relevant information for analyses
 - Enhance interpretability of results
- Unification and replacement of old working group databases, editorial board database, and public pages for results
 - Centralize important information related to physics results

Previous slides covered preservation of analysis code and workflows, while ALCM is for preservation of the review process towards publication

Abstract	<p>A time-dependent, flavour-tagged measurement of λ_{CP} violation is performed with $B^0 \rightarrow D^+ D^-$ and $B_s^0 \rightarrow D_s^+ D_s^-$ decays, using data collected by the LHCb detector in proton-proton collisions at a centre-of-mass energy of 13 TeV corresponding to an integrated luminosity of 6.3 fb⁻¹. In $B^0 \rightarrow D^+ D^-$ decays the λ_{CP}-violation parameters are measured to be</p> $S_{D^+ D^-} = \text{SResultRunTwo},$ $C_{D^+ D^-} = \text{CResultRunTwo}.$ <p>In $B_s^0 \rightarrow D_s^+ D_s^-$ decays the λ_{CP}-violating parameter formulation in terms of ϕ_{CP} and λ results in</p> $\phi_{CP} = \text{phisResultRunTwo},$ $ \lambda_{D_s^+ D_s^-} = \text{lambdaResultRunTwo}.$ <p>These results represent the most precise single measurement of the λ_{CP}-violation parameters in their respective channels. For the first time in a single measurement, λ_{CP} symmetry is observed to be violated in $B^0 \rightarrow D^+ D^-$ decays with a significance exceeding six standard deviations.</p>

Open Data

CMS Open Data User Story: [The Future of Particle Physics is Open](#) [2017-12-01 by Jesse Thaler (MIT)]
 (includes links to 2 published papers with open data!)

 Dataedo /cartoon

Piotr@Dataedo

Open Data

The data collected at the LHC is very valuable! It should be made available to the public in accordance with the [CERN Open Data Policy](#) and [CERN Open Science Policy](#)

- This takes a considerable amount of work. Today I will talk about some of LHCb's efforts to do so

The CERN Open Data Portal (<https://opendata.cern.ch/>) provides a location for LHC experiments to host open data

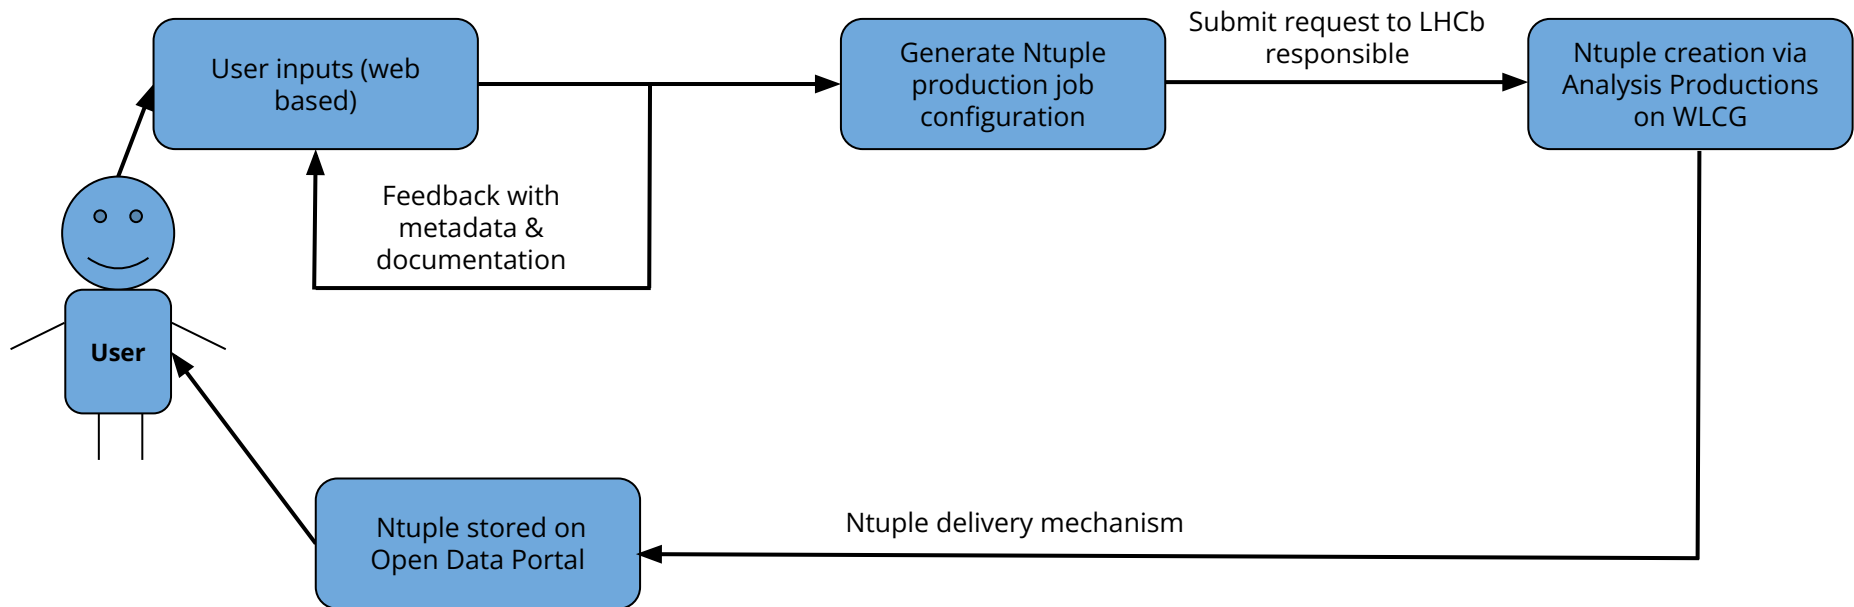

CERN Open Data Policy

The [CERN Open Data Policy](#) outlines the commitment to make the data collected at the LHC publicly available at several levels of complexity, as established by the Data Preservation in High Energy Physics Collaboration ([DPHEP-2012-001](#))

- Level 1: Published results
 - This can include tables and figures but also preprocessed Ntuples or binned and unbinned fit likelihood functions.
- Level 2: Outreach and education
 - Usually in the form of highly preprocessed Ntuples.
- Level 3: Reconstructed data
 - These data have been preprocessed to derive physics objects, such as charged particle candidates, photons, or particle jets. Reconstructed data may or may not be corrected for detector effects, such as efficiency and resolution.

Target: Release research quality data mainly for theorists and phenomenologists
- Level 4: Raw data
 - the basic quantities recorded by the experimental instruments.

The Ntuple Wizard

Our recent paper: [Comput.Softw.Big Sci. 7 \(2023\) 1, 6](#)

Interlude: Security & Permissions

- Standard LHCb Ntuple making application (DaVinci) configured with python scripts
 - **Running arbitrary code from external users is a security risk!**
 - **Config output saved in yaml data structures, interpreted by internal parsers**
- Dataset discovery and Ntuple configuration require metadata from the LHCb database and software stack
 - Metadata is extracted at “deployment time”
 - **Only static files are read at run time, no interaction with LHCb database system**
- LHCb policy reserves right to withhold part of a dataset (e.g. ongoing analyses)
 - Run 1 open data release initially only contained a subset of the data because of this
 - The Ntuple Wizard can improve this via **fine-grained control** over:
 - **Stripping lines** or equivalent selections

Web Interface: Dataset Discovery

***Key feature:** Find available dataset by first choosing physics object of interest!

Decay search

Head (exactly): B^+ Contains (all of): D^0 Show only selected:

Tags (none of): undefined-unstable x charge-violating x lepton-flavour-violating x Stripping line

- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^+\pi^-(\pi^0 \rightarrow \gamma\gamma))\pi^+$ 2 Stripping lines
- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^+\pi^-\pi^-\pi^+)\pi^+$ 3 Stripping lines
- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^+\pi^-)\pi^+$ 6 Stripping lines
- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^-K^+(\pi^0 \rightarrow \gamma\gamma))\pi^+$ 2 Stripping lines
- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^-K^+K^+\pi^-)\pi^+$ 2 Stripping lines
- $B^+ \rightarrow (\bar{D}^0 \rightarrow K^-K^+\pi^-\pi^+)\pi^+$ 3 Stripping lines

Lists physics objects available in the LHCb database (primarily decays)

- List filtering options include:
 - Decay head (top level decaying particle)
 - Particles in the decay
 - Tags related to specific physics (include or exclude)
 - “Stripping line” name
 - more useful for LHCb internal users
- Can make multiple selections from the list

Web Interface: Dataset Discovery

Selection of a physics object exposes the corresponding available datasets for the user to choose from

Stripping line selection

- Specifies algorithms applied to identify candidates of the selected physics object

Dataset selection

- Specifies the dataset to run over -- multiple selections can be made

Production configuration

Launch TupleTool configuration

Web Interface: Tuple Tool Configuration Example

Example of TupleTool configuration interface for TupleToolTISTOS (**T**rigger **I**ndependent of **S**ignal/**T**rigger **o**n **S**ignal)

- Configurable names, data types, and user input fields are included
- Mouseover tooltips and links to documentation are included for guidance
 - This includes LHCb Doxygen documentation
- Each TupleTool has specific configurables
 - For many tools, the standard configuration is perfectly fine
 - Only certain tools (e.g. related to the trigger) need specific configurations, to be specified in the documentation

Option	Data Type	Control
ExtraName	str	Text input field
Verbose	bool	Toggle switch (off)
MaxPV	uint	Spin box (value: 100)
VerboseL0	bool	Toggle switch (off)
VerboseHit1	bool	Toggle switch (off)
VerboseHit2	bool	Toggle switch (off)
VerboseStripping	bool	Toggle switch (off)
FillL0	bool	Toggle switch (on)
FillHit1	bool	Toggle switch (on)
FillHit2	bool	Toggle switch (on)
FillStripping	bool	Toggle switch (off)
TriggerList	text	Text input field
Hit1TriggerTisTosName	str	Text input field (value: HR1TriggerTisTos)
Hit2TriggerTisTosName	str	Text input field (value: HR2TriggerTisTos)
L0TriggerTisTosName	str	Text input field (value: L0TriggerTisTos)
PIDList	[int]	+ button
TopParticleOnly	bool	Toggle switch (off)
Hit1Phys	str	Text input field (value: HR1(?IODIN)(?L0)(?Lumi)(?ITell1)(?MB)(?NZS)(?Velo)(?BeamGas)(?...)
Hit2Phys	str	Text input field (value: HR2(?Forward)(?DebugEvent)(?Express)(?Lumi)(?Transparent)(?Pa...)
TIS	bool	Toggle switch (on)
TOS	bool	Toggle switch (on)
TUS	bool	Toggle switch (off)
TPS	bool	Toggle switch (off)

Documentation for TupleToolTISTOS

Happy Analysis!
