KEK / Belle I & II

Thursday 3 October 2024 09:00 (20 minutes)

The data from the Belle experiment, which finished collecting data in 2010, was passed on to its successor, the Belle II experiment. The Belle II experiment is currently accumulating data, but the Belle data will be used only by Belle II collaborators, at least until the amount of data exceeds that of the Belle experiment.

To continue the analysis using the Belle data, the Belle II experiment has independently developed tools that can handle the Belle data within the Belle II Software framework, and is still actively producing physics results based on the Belle data.

On the other hand, some of the software libraries used by the Belle experiment are no longer compatible with new operating systems and computing environments.

In this talk, we will report on the current status of the Belle II experiment and the preservation of the Belle data and analysis environment.

Summary

Author: HARA, Takanori (KEK High Energy Accelerator Research Organization (JP))

Presenter: HARA, Takanori (KEK High Energy Accelerator Research Organization (JP))

Session Classification: Experiments and sites
