

Sheffield Update

Things have probably changed since last time...

Going (slowly) to AlmaLinux9

Very few migrated currently, having difficulty getting users to test.

Tries a VM host and it turns out it's too old, 2 new ones on order.

New Network Switches

Now have uplink to Uni
Network of 2*25GB

Believe Uni only has
4*10GB to Janet

The New NAT Gateway

The work will continue...

At least until I run out of money to replace all the servers which are not upgradable.
