

# Proposal for CP-even aQGC operator conventions

Gauthier Durieux  
(CP3 – UCLouvain)

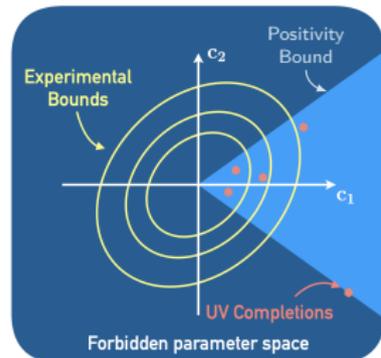

note draft [here](#)

GD, G. N. Remmen, N. L. Rodd (editors),  
O. J. P. Éboli, M. C. Gonzalez-Garcia,  
D. Kondo, H. Murayama, R. Okabe, M. Riemann

with oversight from LHC EFT WG conveners  
I. Brivio, K. Potamianos, M. Presilla, D. Sutherland

# Motivation

©Nick Rodd

Facilitate the use of positivity constraints  
by LHC experiments

dedicated LHC EFT WG meeting on 3 July 2023

aQGC's as most obvious target, CP-even ones in particular

- step 0: fix conventions ← we are here
- step 1: translate positivity constraints
- step 2: distribute them in some convenient form
- step 3: discuss how to take them into account

## Existing literature

Almeida, Éboli, Gonzalez-Garcia, Mizukoshi '06, '16, '20

- redundancies and omissions corrected in '16 and '20
- UFO implemented [here](#)
- focused on C-even and P-even operators
- two C-odd and P-odd operators missing

Remmen, Rodd '19

- CP-even and -odd all listed and distinguished
- different operators than AEGM
- one even/odd pair misidentification

Murphy '20 (see also Li, Ren, Shu, Xiao, Yu, Zheng '20)

- same operators as RR, but different naming
- SmeftFR implementation by Dedes, Rosiek, Ryczkowski, et al. '23
- CP-even and -odd operators not distinguished

Kondo, Murayama, Okabe '22

- CP-even and -odd operators counted separately using Hilbert series
- sign mistake in explicit operator property

## This note

- CP properties settled, with explanations
- minimal CP-even extension of Almeida, et al. '20  
rather than following the full dim-8 basis of Murphy '20
- map to Remmen, Rodd '19 and Murphy '20
- CP-odd operators listed for completeness too
- UFO implementation of all operators [here](#)

# Proposed CP-even aQGC conventions
