## **Statement of the Pierre Auger Collaboration as input for the 2026 European Particle Physics Strategy**

This document describes, on behalf of the Pierre Auger Collaboration, the close relation between the research interests of the particle and astroparticle physics communities. We underline the main areas in which synergies between the CERN and the astroparticle physics fields of research can be developed, providing input to the 2026 European Particle Physics Strategy Update. We conclude with recommendations on cooperation in topics of mutual interest, and on suggested astroparticle-related activities at CERN.
