Test Board

- Small test board with only a few channels and without SoM
- Goals:
  - Test and verify analog circuits, power supplies, and other periphery
  - Compare different design options for some circuits

- Status:
  - Schematic entry is done
  - Footprints are mostly done, should finish this week
  - Starting layout next, expect to finish around October

Brookhaven National Laboratory

Caribou 2

- Test board and FETBv2 serve as base for the Caribou 2 design

- After verification of test board:
- Scale up number of channels
  - Can be taken 1:1 from test board
- Add SoM and digital I/O
  - Can be taken from FETBv2
  - Routing to 2 FMC connectors
  - Power and periphery for SoM and FMC
