## First physics results from milliQan

*Wednesday, 4 June 2025 12:10 (17 minutes)*

We will report the status of the milliQan experiment at CERN. The milliQan “bar” detector was completed in June 2023 and has been taking physics data since then. The milliQan “slab” detector was completed in Fall of 2024 and is being commissioned. We will give an update on the readiness of the slab detector for physics data taking. Finally, we will present first physics results on the search for millicharged particles in  $127 \text{ fb}^{-1}$  pp collision data recorded by the bar detector during LHC Run 3.
