

# The DESIR facility at GANIL/SPIRAL2

Bertram Blank  
L2Pi Bordeaux

The ISOLDE logo is a white square with the word "ISOLDE" in a large, blue, sans-serif font. The letters are partially overlapping, with a thick blue horizontal bar underneath the letters "O" and "I".

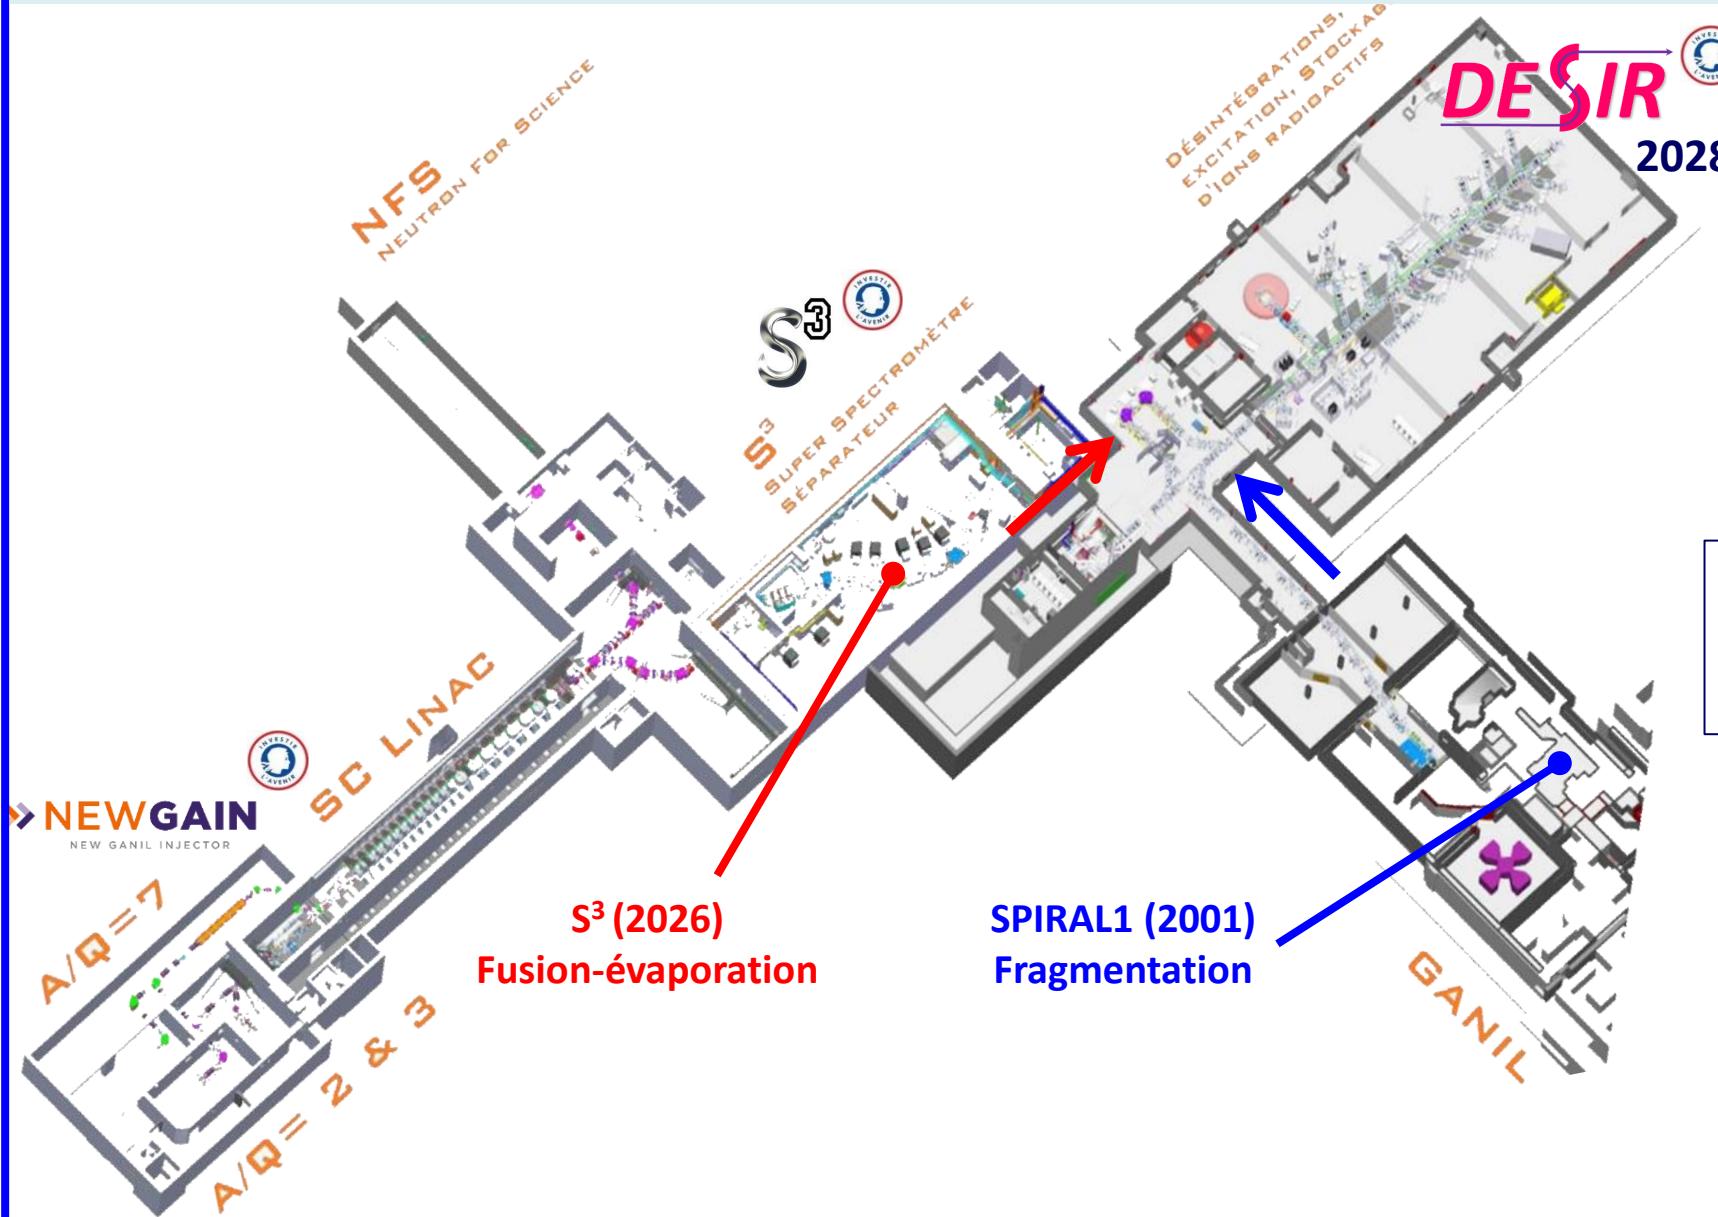

ISOLDE Workshop and Users meeting  
2024  
27-29 November 2024

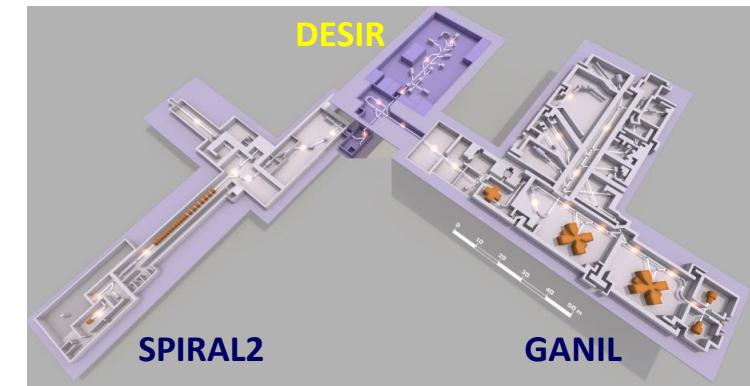

## A new GANIL users facility

- Study of the fundamental properties of atomic nuclei and underlying forces
- With a high precision using ultra-pure samples of radioactive ions manipulated at very low energy
- Taking advantage of the various RIBs production methods
- In complementarity to S<sup>3</sup>(-LEB) and other GANIL installations

● ● ● DESIR at GANIL

Building delivery: mid-2025  
 Commissioning (stable beams): 2027  
 Day 1 experiments (RIBs): 2028

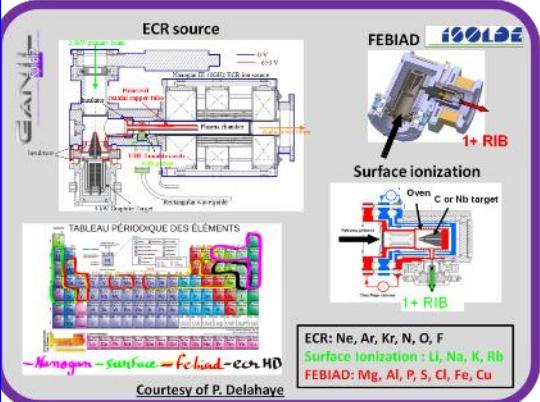

# • • • DESIR physics programme

- Collinear laser-spectroscopy
- Correlations in  $\beta$  decay (MORA)
- Mass meas. (PIPERADE, MLLTrap)
- (Trap-assisted) decay spectroscopy

**SPIRAL 1**

**Fragmentation**

**LUMIERE**

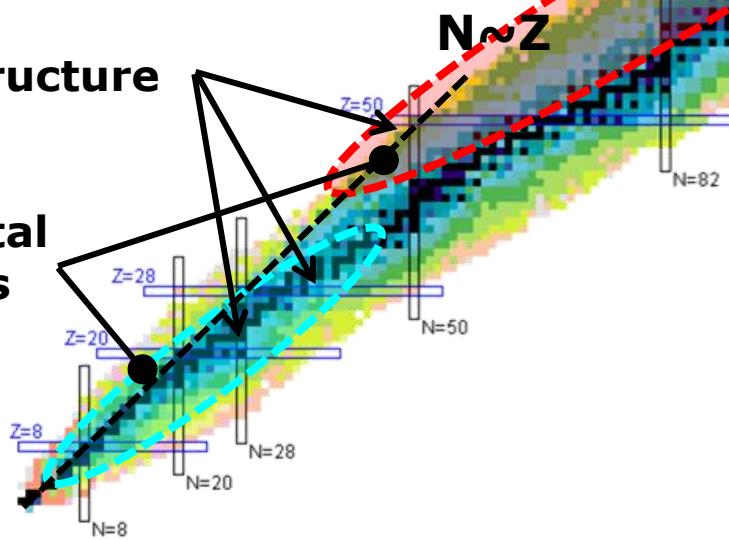

**DETRAP**

**BESTIOL**

✓ Exotic decay modes

✓ Nuclear structure

✓ Fundamental interactions

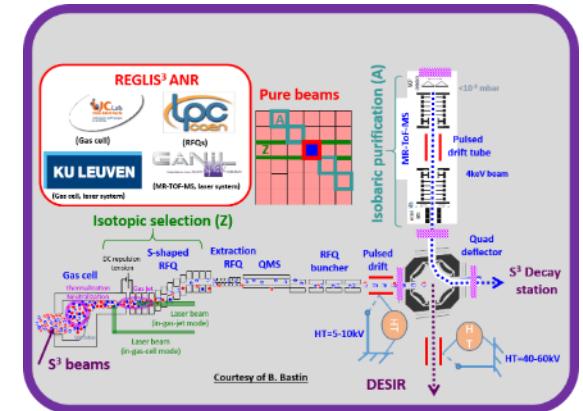

**(Super) Heavy nuclei**

- ✓ Size & Shape
- ✓ Deformation

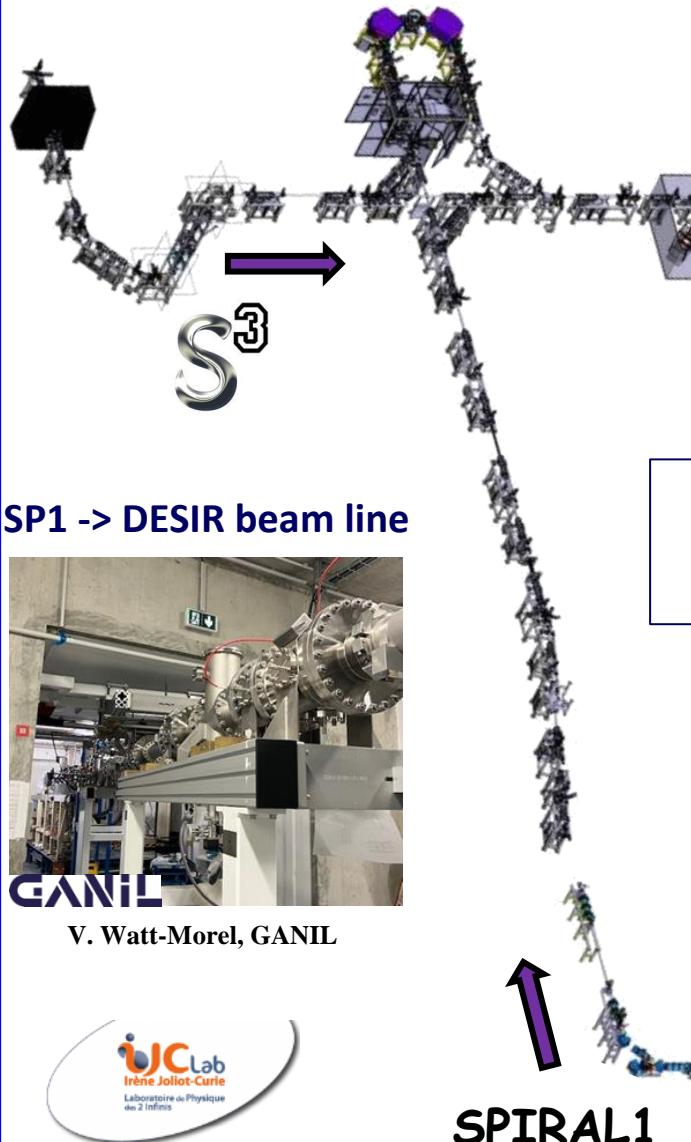

**S<sup>3</sup>-LEB**

**Fusion-evaporation**

## ● ● ● Transpost beam lines

1+ ions, < 60 keV, <  $80 \pi.\text{mm}.\text{mrad}$  – fully electrostatic

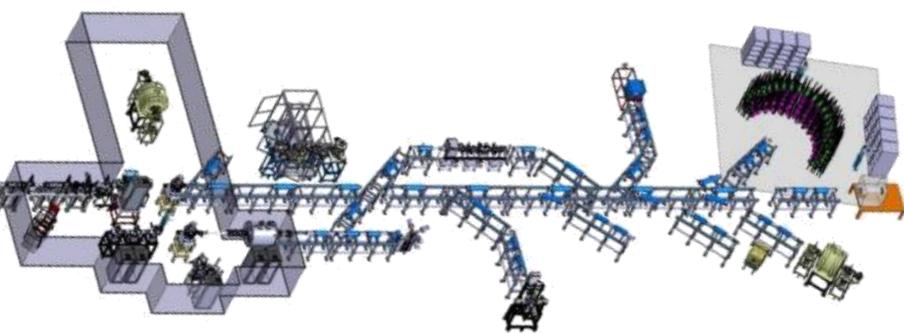

SP1 -> DESIR beam line

V. Watt-Morel, GANIL

L. Perrot et al., IJCLab

DESIR  
Hall

Test bench

Ph. Alfaurt, LP2iB

- Junction beam lines from SPIRAL1 and S3-LEB to the DESIR Hall: ~100 m
- Installation starting by the end of 2025

### Example: 45° deflector assembly

Insertion

Base assembly

Pole assembly

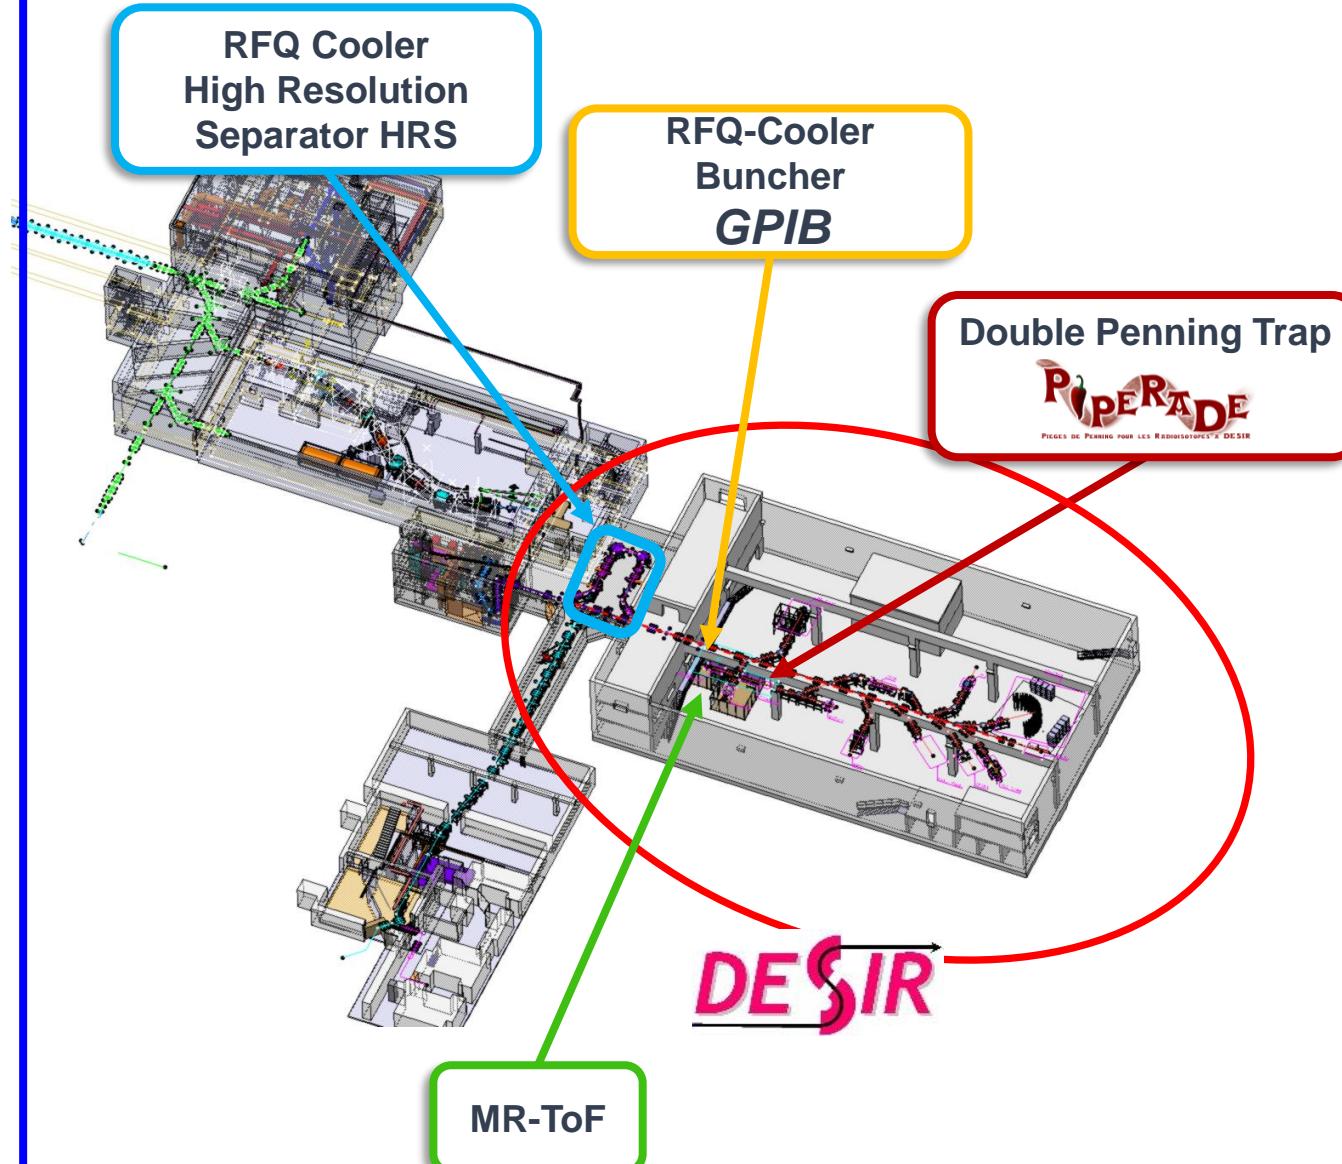

Internal part

Upper part

## ● ● ● Beam preparation and purification

### Mass separation/beam purification:

- HRS+RFQ**:  $\sim \frac{M_0}{\Delta M} = 20\,000$
- MR-ToF**:  $\sim \frac{M_0}{\Delta M} = 200\,000$
- Piperade 1<sup>st</sup> trap**:  $20\,000 < \frac{M_0}{\Delta M} \leq 10^5$
- Piperade 2<sup>nd</sup> trap**:  $R \approx 10^6 - 10^7$

### Beam preparation:

- GPIB**
- Piperade 2<sup>nd</sup> trap**

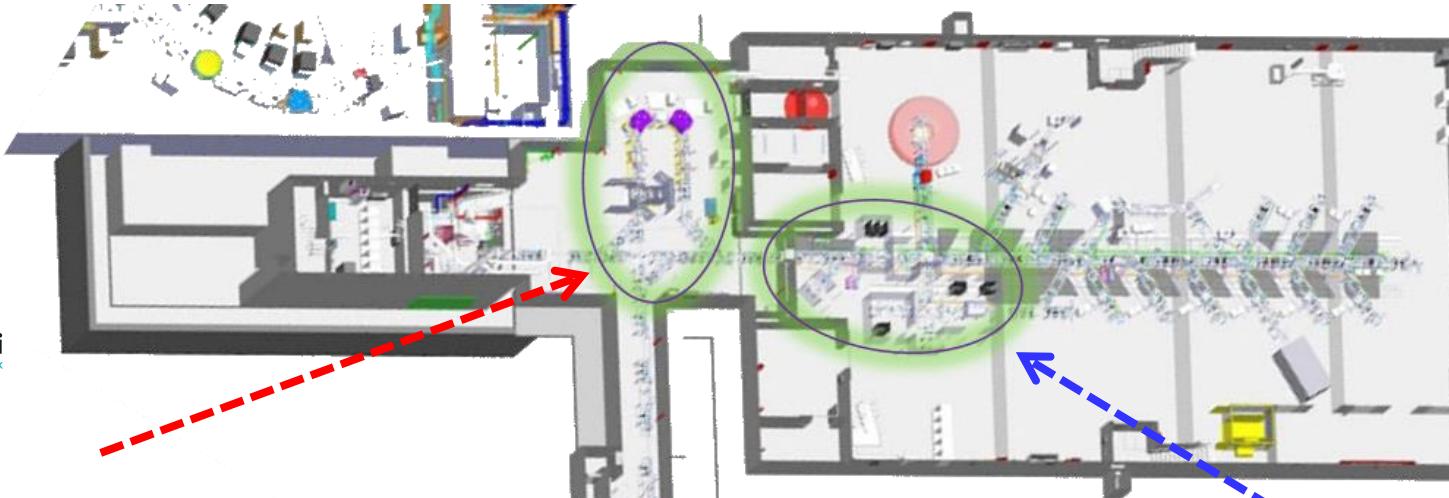

### Mass measurements:

- Piperade 2<sup>nd</sup> trap**: Mass precision:  $10^{-8} - 10^{-9}$

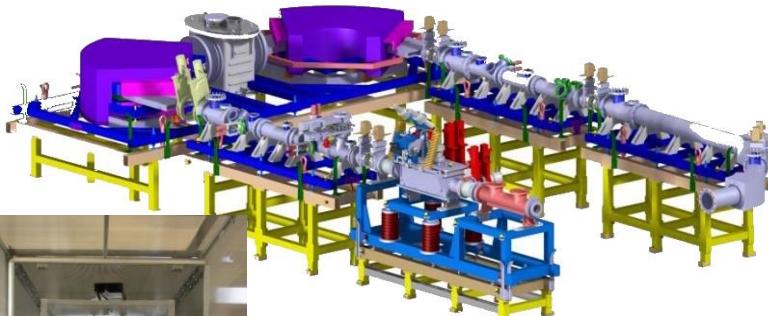

## ● ● ● Beam purification

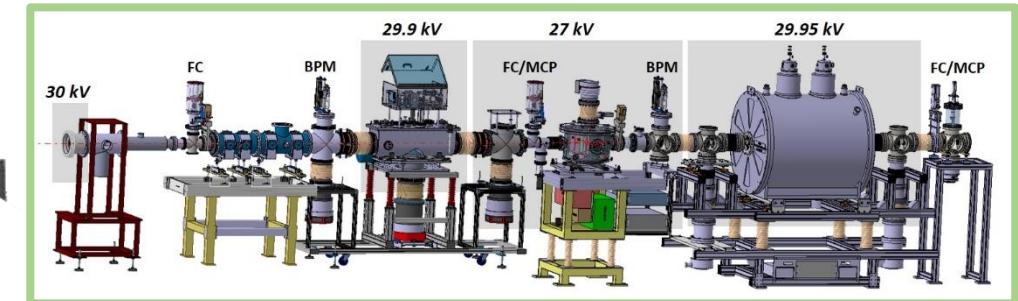

**RFQ + HRS**  
 $M/\Delta M = 20,000$  @  
 $3\pi \text{ mm.mrad} / 30\text{keV}$

Refurbishment  
at LPC Caen

Commissioning at LP2iB

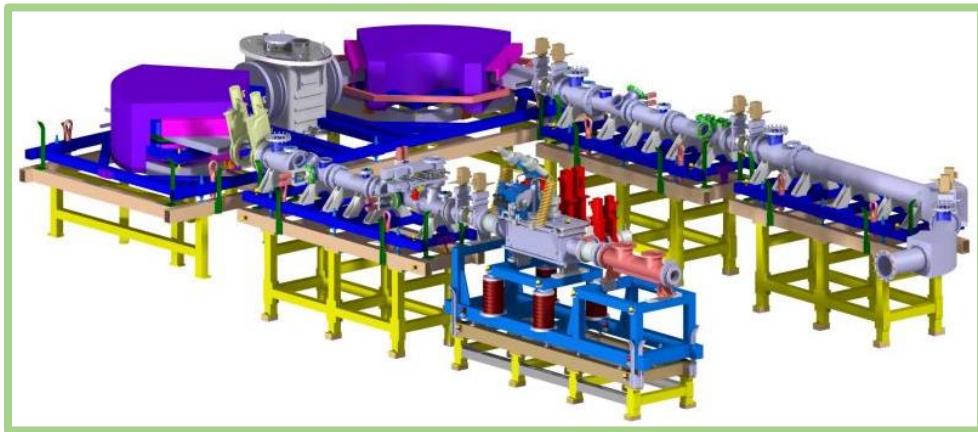

Commissioning at LP2iB

- Installation and commissioning: 2026-2027
- MR-ToF-MS for mass measurements and beam purification: 2026-2028

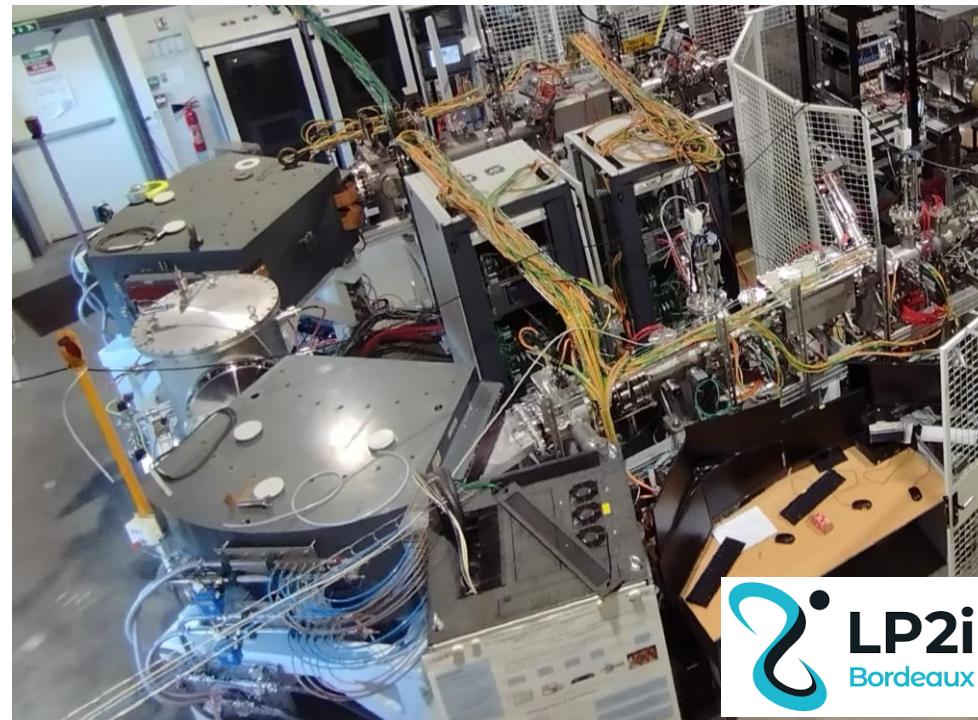

**GPIB + PIPERADE**  
 $10^5 \text{ ions/bunch}, 2-20 \text{ Hz } M/\Delta M = 10^5$

● ● ● Beam purification: High-resolution separator HRS

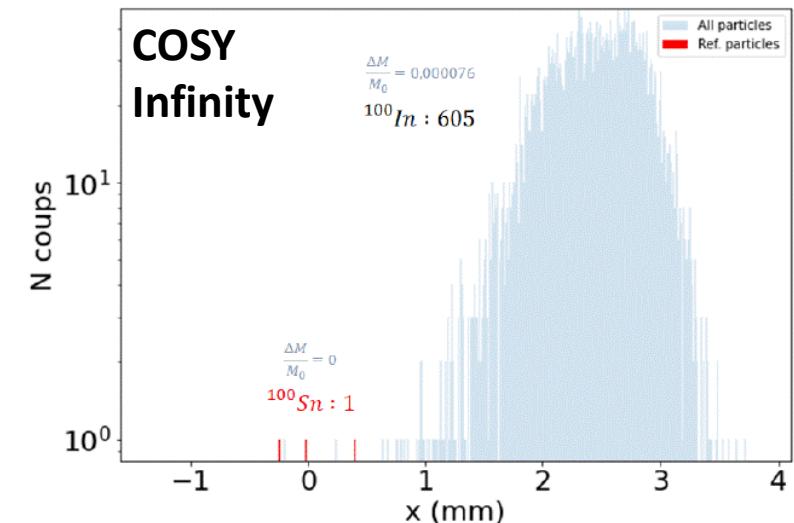

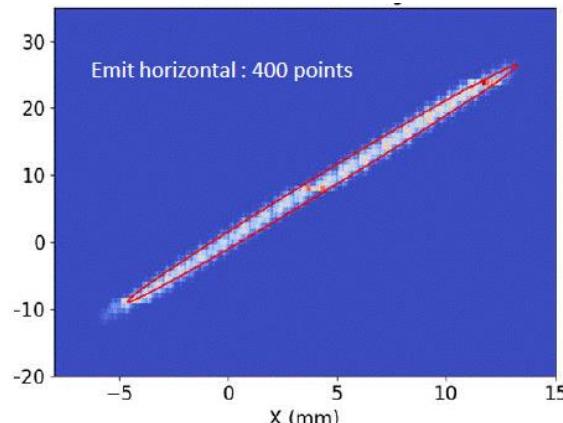

$M/\Delta M = 20\,000$  @  $3\pi \text{ mm.mrad} / 30\text{keV}$

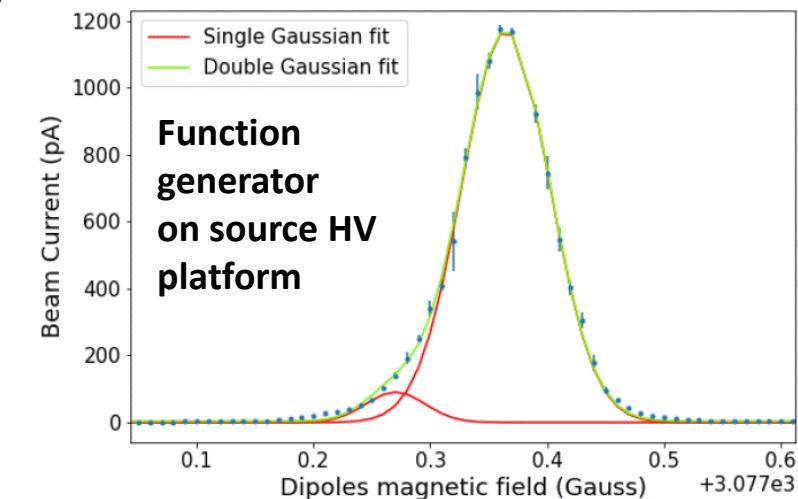

Pepperpot emittance meter

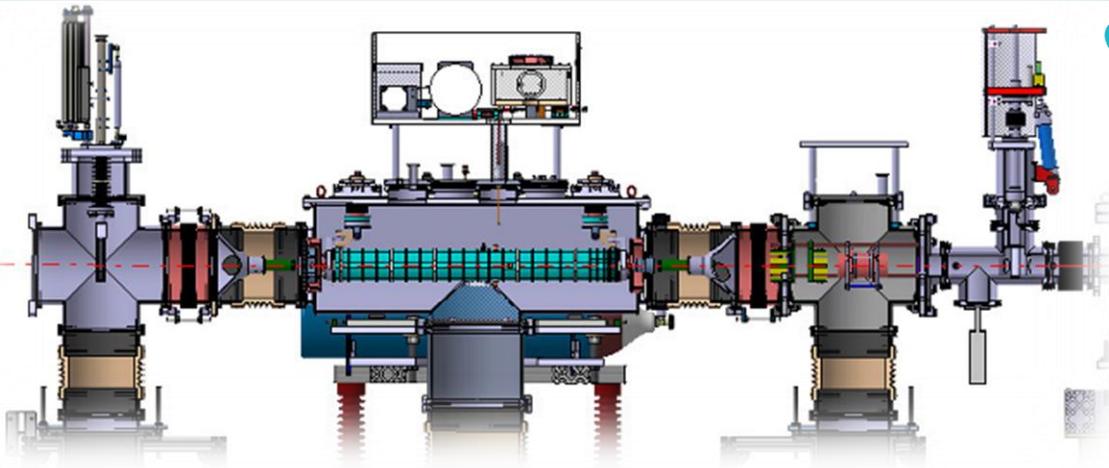

→ beam emittance

$^{100}\text{Sn}/^{100}\text{In}$  separation:  
simulation and measurement

## ● ● ● Beam preparation: General purpose ion buncher GPIB

### Emittance:

- $3 \pi.\text{mm.mrad}$  at 30 keV

### Continuous mode:

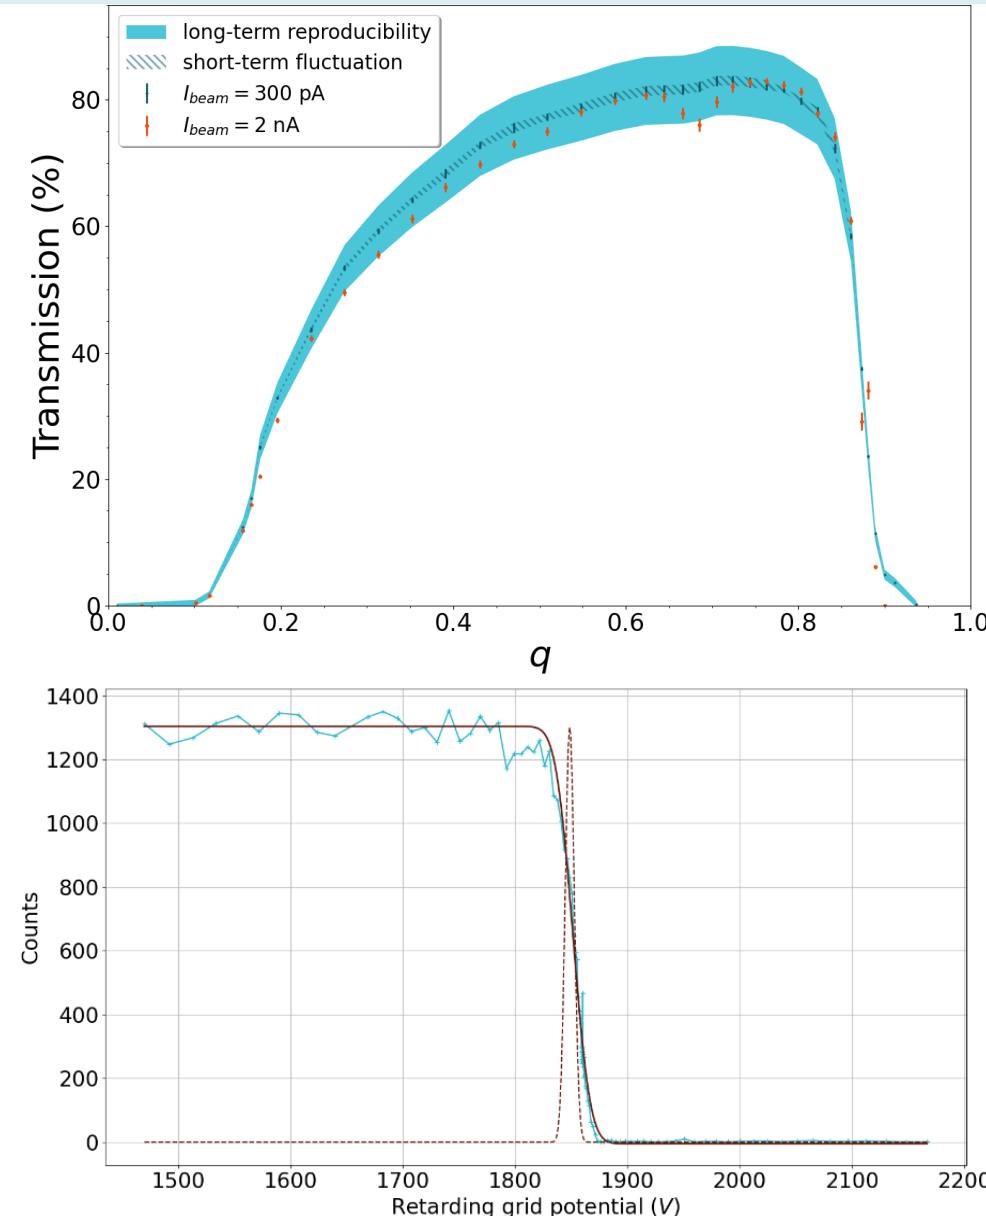

- Transmission for  $\text{K}^+$  ions is routinely over 75 %
- Careful optical tuning yields transmission >90 %

### Bunching mode:

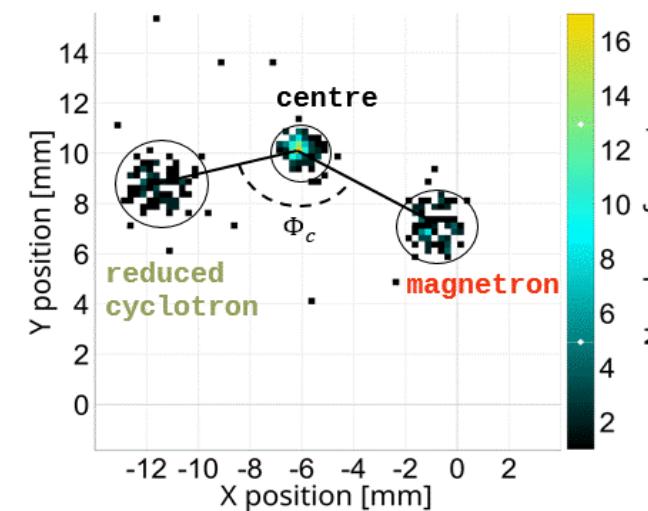

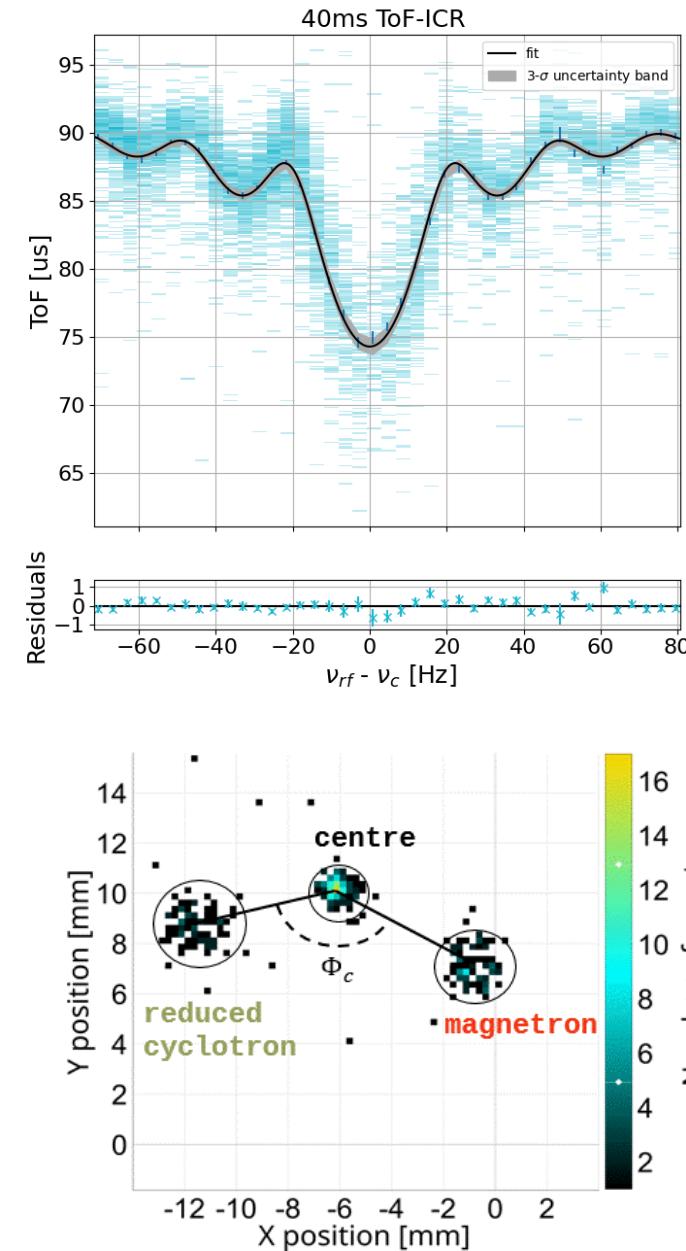

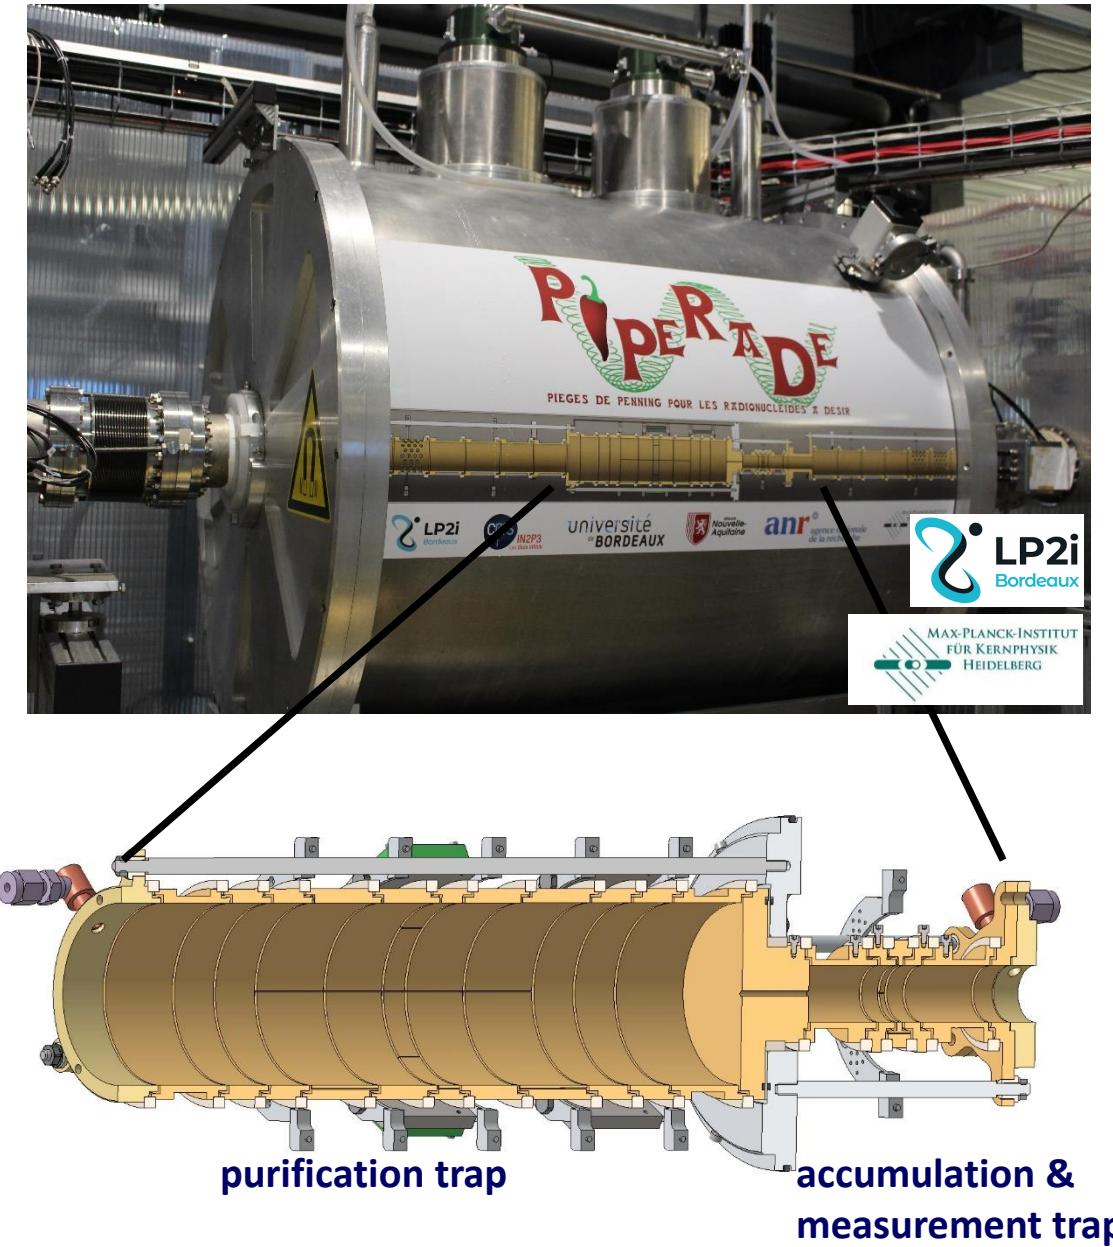

- 100 % transmission up to  $10^6$  ions/bunch
- ~ 50 % transmission with  $10^8$  ions/bunch

### Energy and time dispersion:

- Energy dispersion measurement currently limited by detection system (< 6 eV)
- Minimum time dispersion currently down to  $\approx 250$  ns (FWHM) at 3 keV

## ● ● ● Beam purification: PIPERADE

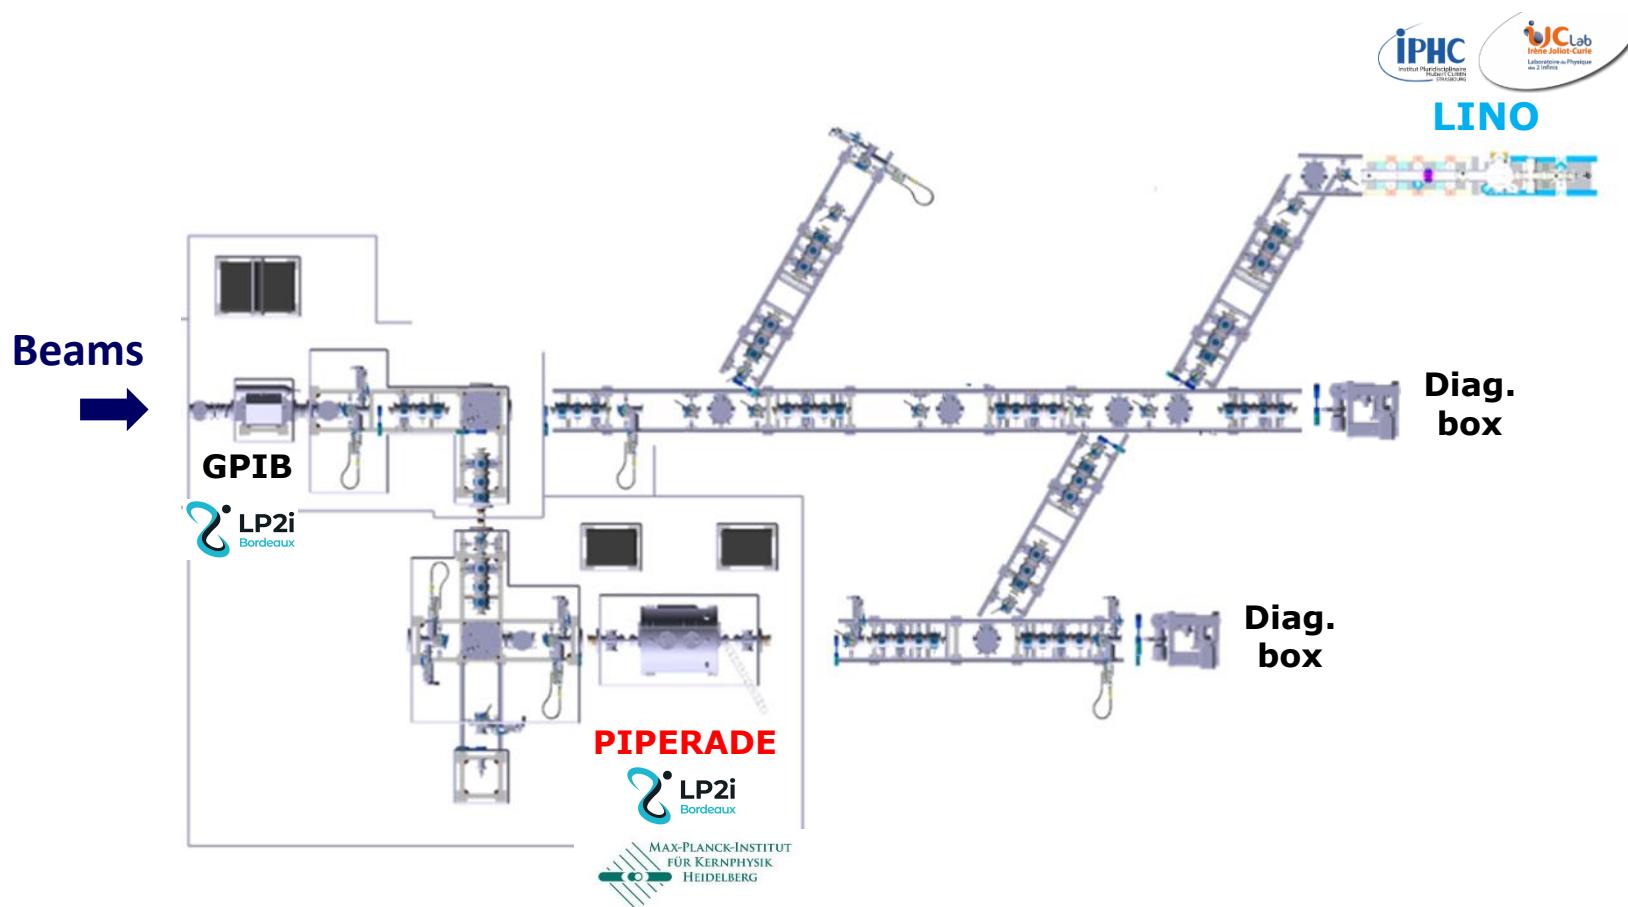

$$\text{accuracy: } \frac{\Delta m}{m} \approx 9.5 \times 10^{-10}$$

$$\text{precision: } \frac{\delta m}{m} \approx 3 \times 10^{-9}$$

$$\nu_c = \frac{\phi_c + 2\pi n}{2\pi t}$$

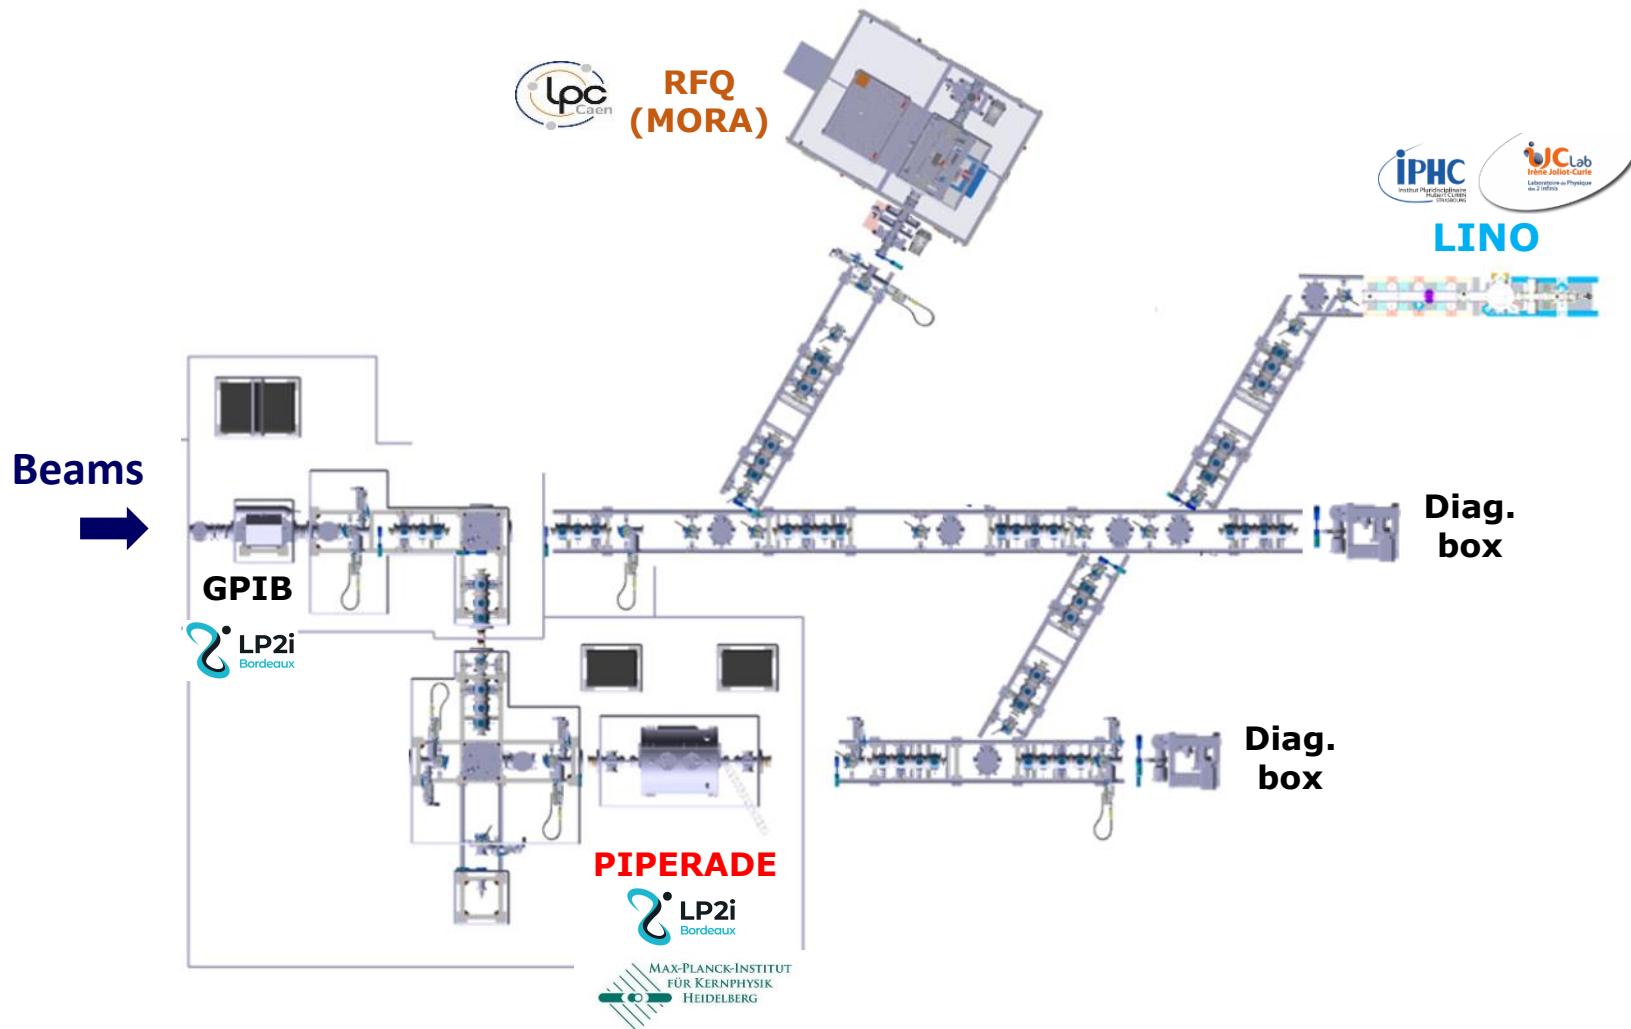

- ● ● Experimental equipment: time line

S2 - 2026: GPIB + PIPERADE + fluorescence laser line (LINO)

● ● ● Experimental equipment: time line

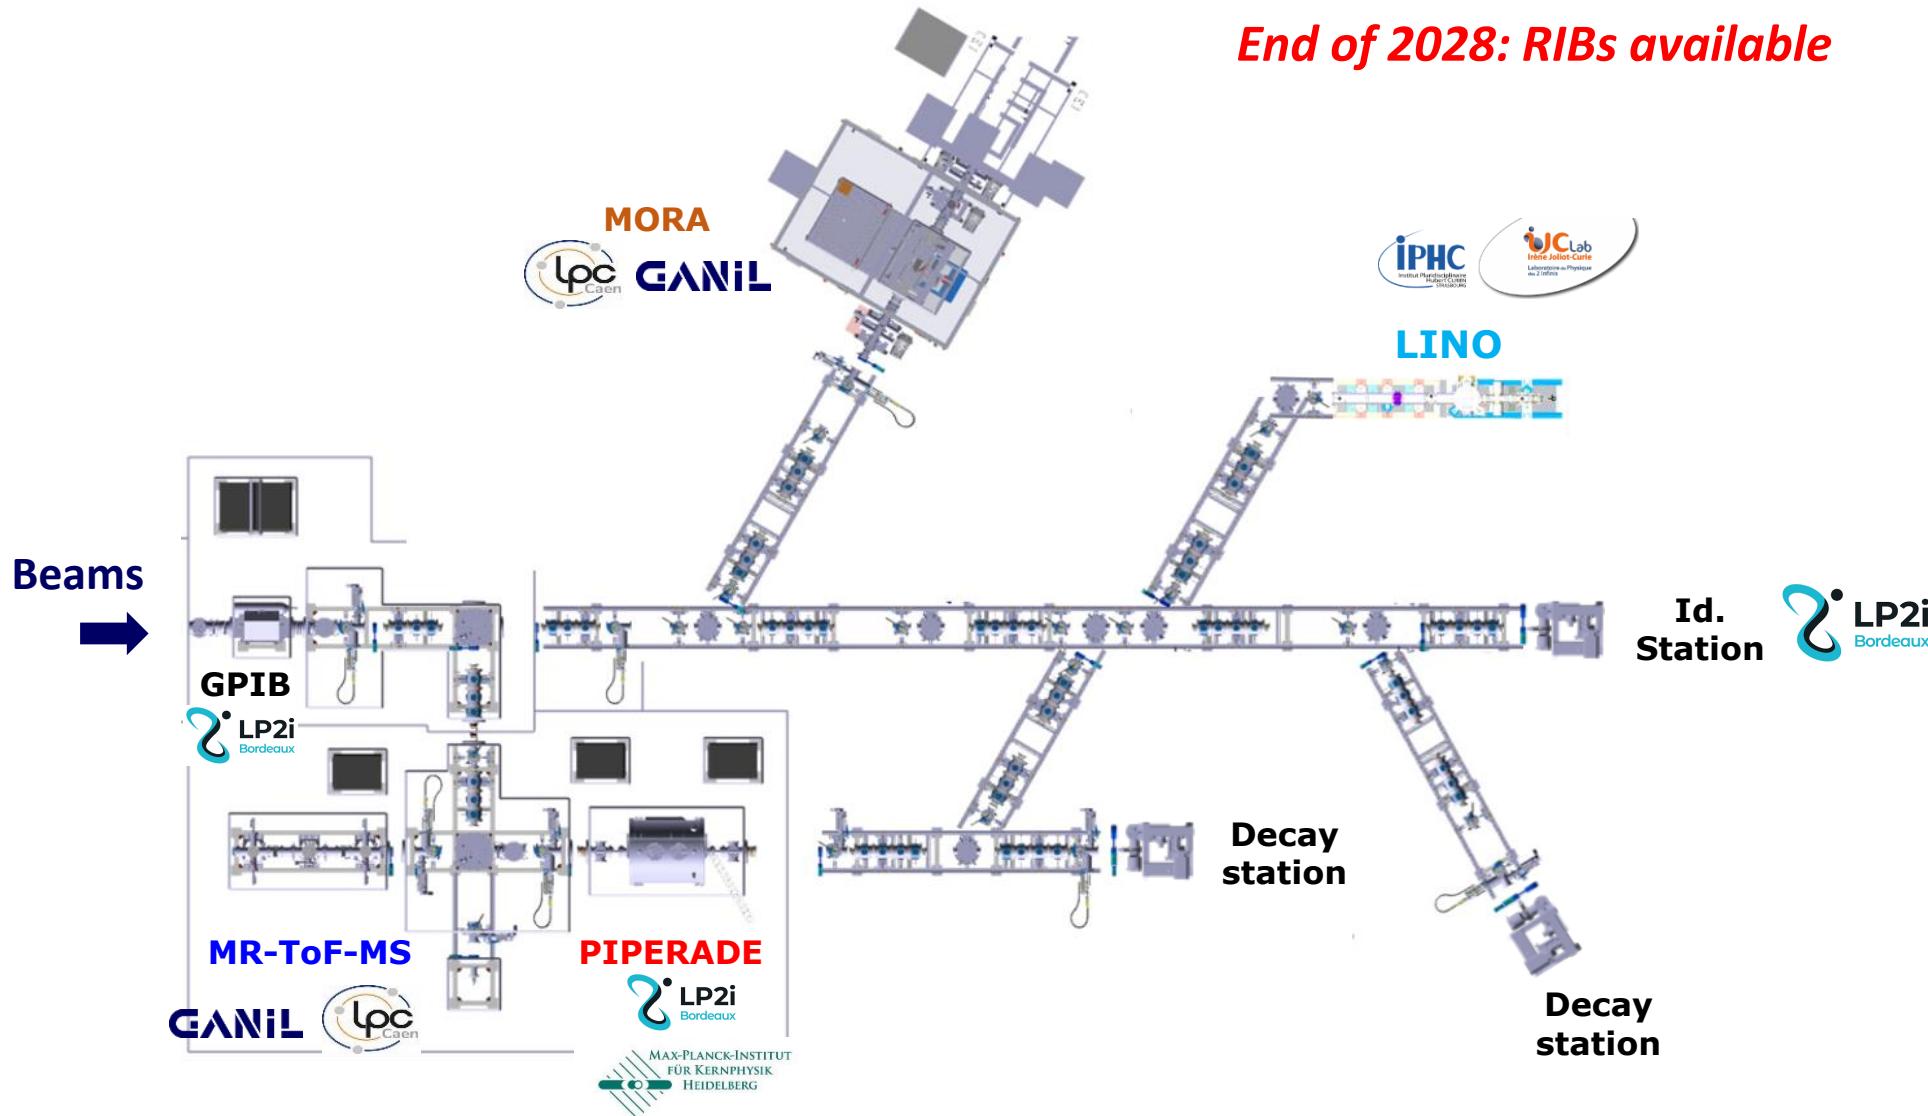

S1 - 2027: MORA cooler-buncher (RFQ)

● ● ● Experimental equipment: time line

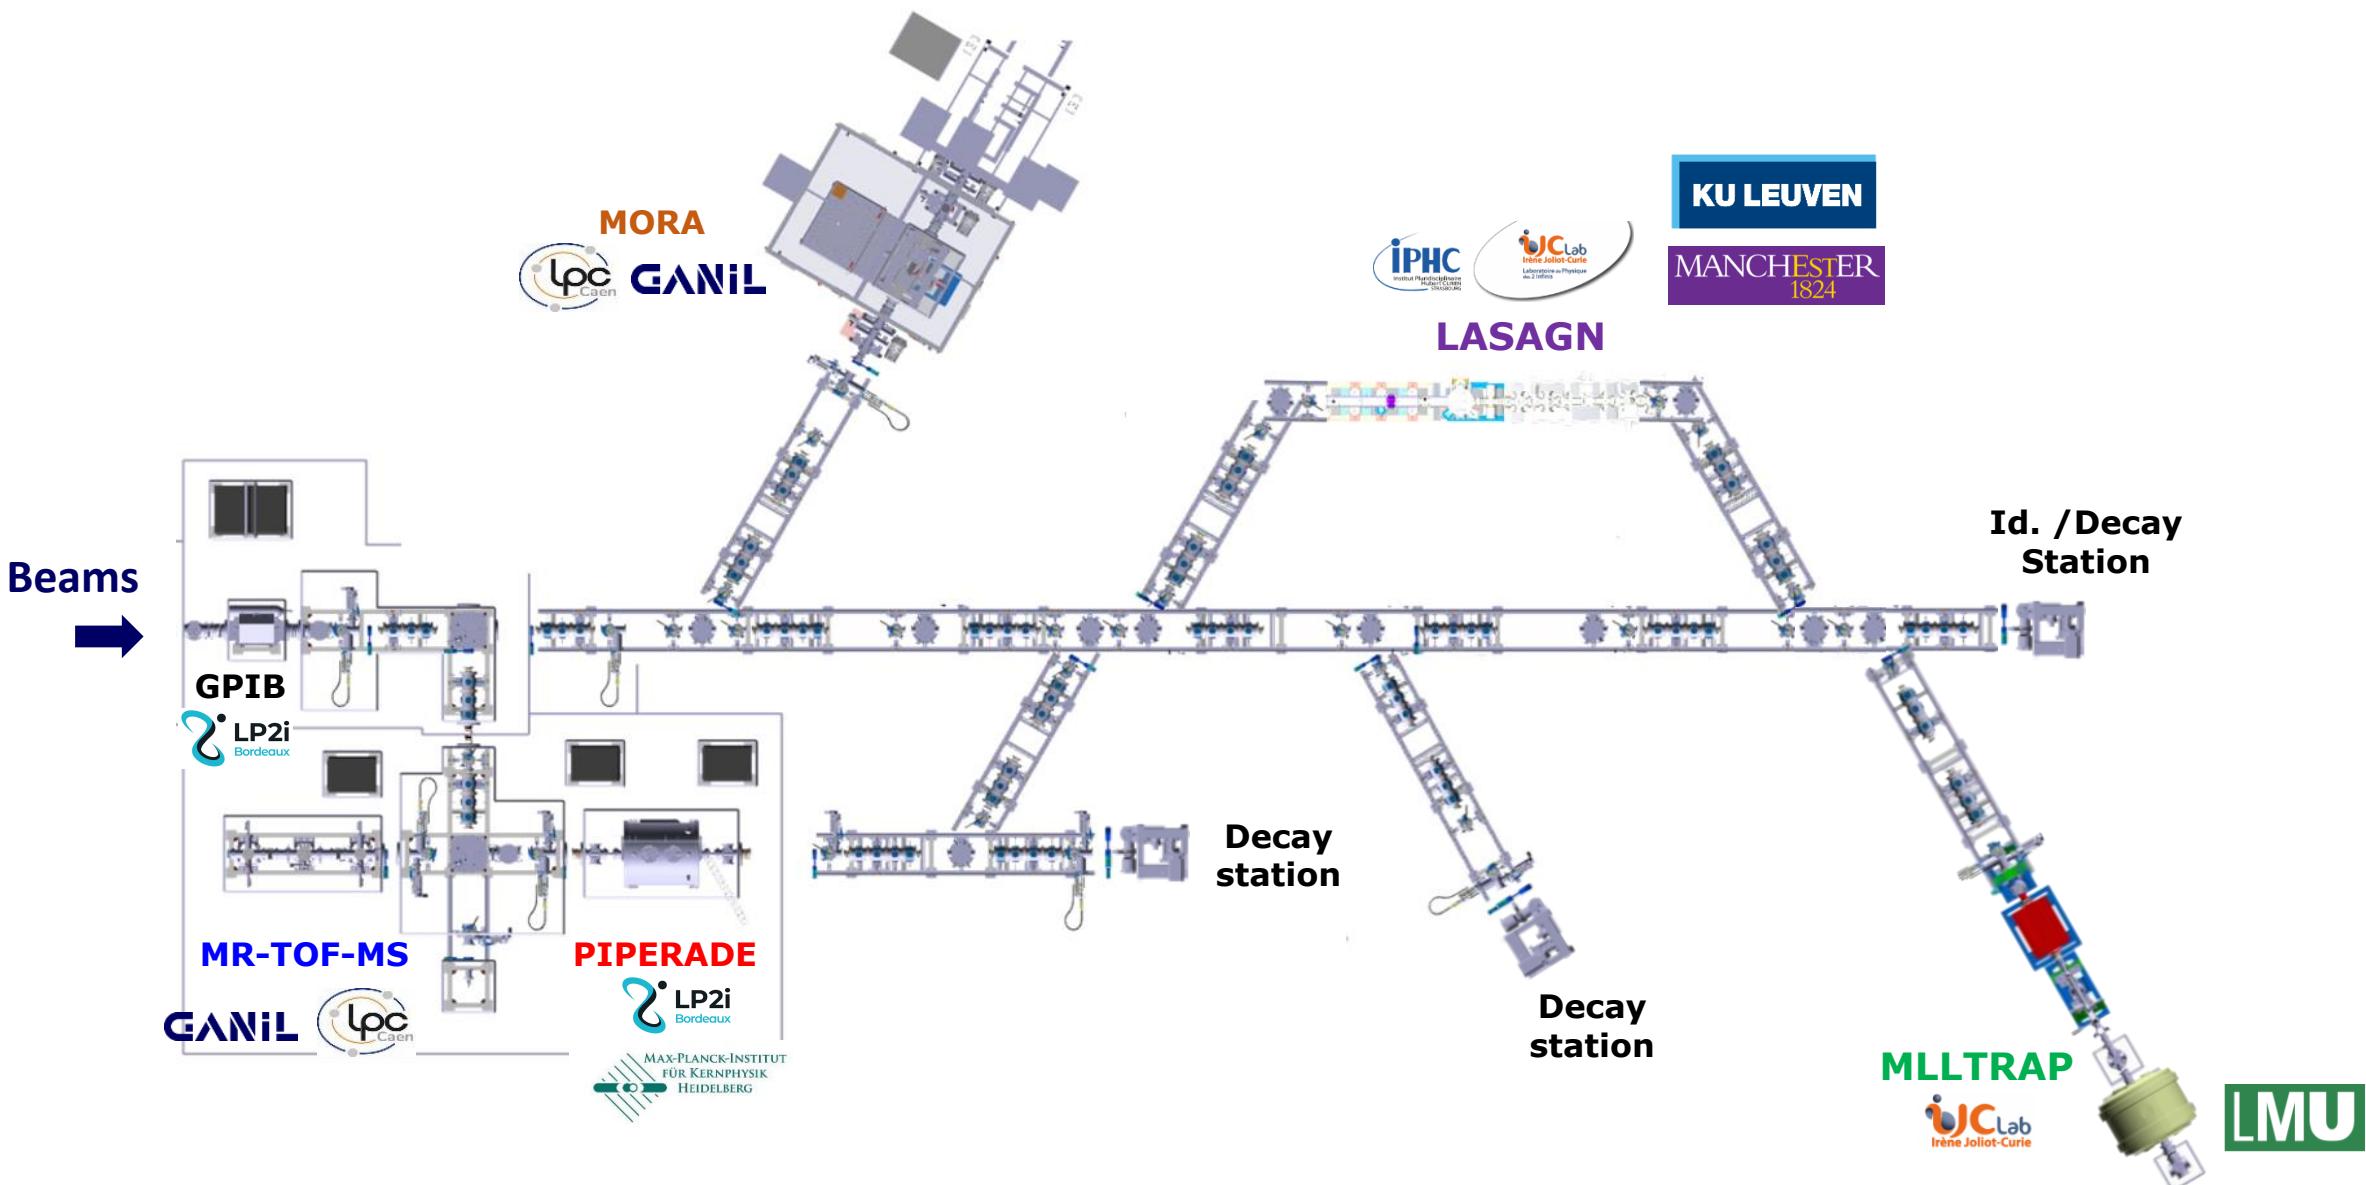

2028: MORA completed, MR-ToF-MS, decay stations

*End of 2028: RIBs available*

● ● ● Experimental equipment: time line

2029: collinear laser spectroscopy (**LASAGN**) completed, **MLLTrap**

## • • • The DE<sub>sir</sub>TRAP<sub>ping</sub> facility

### MORA

P. Delahaye, GANIL, L. Hayen, LPC Caen

- RFQ-CB associated with a Paul trap
  - >  $\beta\text{-}\nu$  angular correlation coefficient
  - > D correlation with laser polarized beams

P. Delahaye et al., *Hyperfine Interaction* 240 (2019) 63

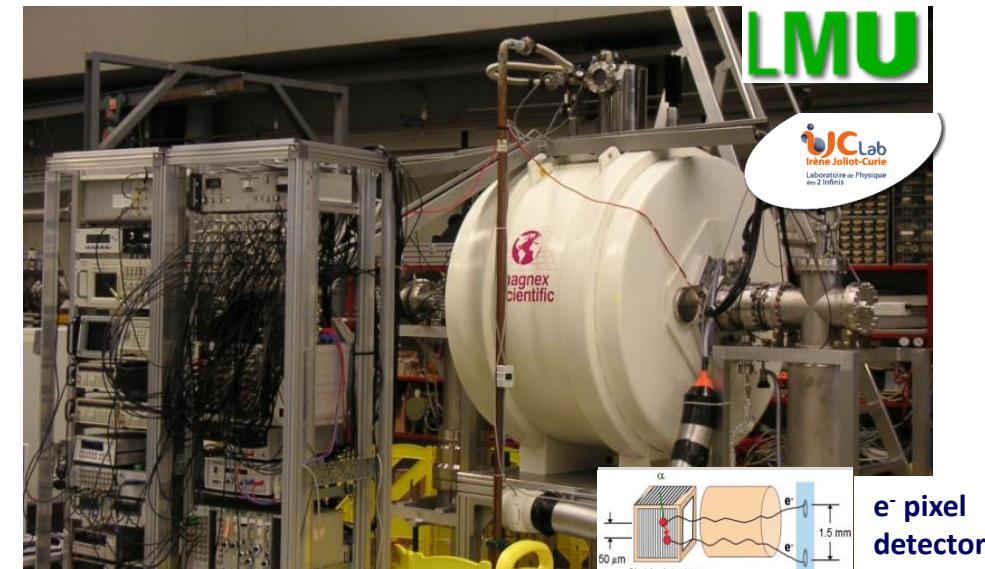

- ⇒ Fundamental interaction physics
- exotic currents, CVC,  $V_{ud}$ , CP-violation

Commissioning at JYFL

### MLLTrap

P. Thirolf, LMU Munich – E. Minaya Ramires, IJCLab

- Double Penning trap
  - > high precision mass measurements
  - > in-trap decay

E. Minaya-Ramires et al., *NIM B* 463 (2020) 315

P. Chauveau et al., *NIMB* 463 (2020) 371

⇒ Nuclear structure & Decay properties

- shell evolution, deformation
- (super-) heavy nuclei decay spectroscopy

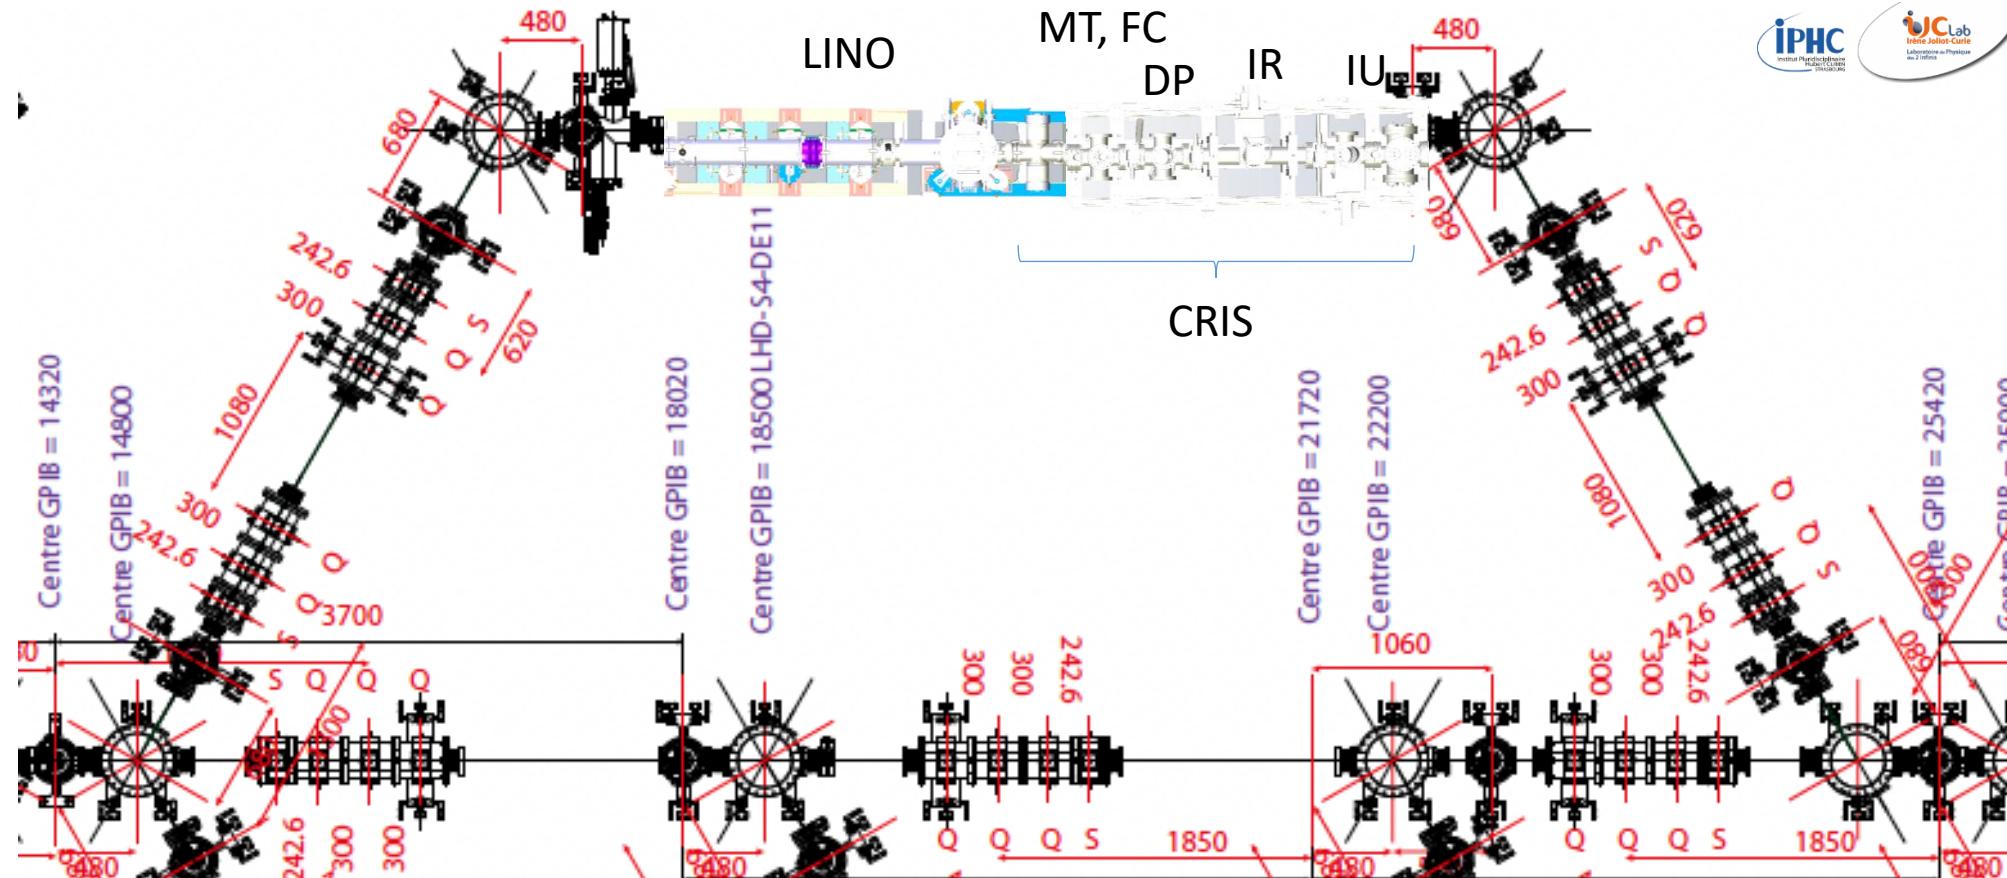

Commissioning at ALTO (IJCLab)

# The LUMIERE facility

Laser Utilization for Measurement and Ionization of Exotic Radioactive Elements

## LASAGN (L. Lalanne, IPHC)

- Collinear laser spectroscopy (CRIS like)  
-> hyperfine structure (magnetic and quadrupole moments, mean square charge radii)
- LINO commissioned at ALTO, IJCLab, *D. Yordanov et al.*

## • • • The BESTIOL facility

### BEta decay STudies at the SPIRAL2 IsOL facility

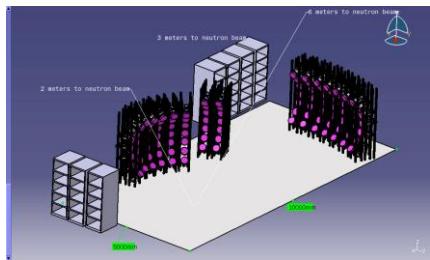

Beam cooling and purification using PIPERADE for (trap-assisted) decay spectroscopy

-> High-precision measurements with ultra-pure samples using:

- $\beta$ - $\gamma$  decay stations (BEDO, ...)
- total absorption spectrometers (DTAS)
- neutron detection arrays (BELEN, MONSTER, ...)

-> Fundamental interaction, nuclear structure, decay properties

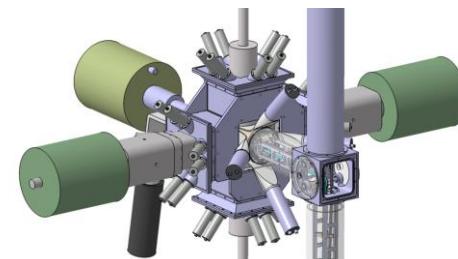

- CVC,  $V_{ud}$
- beta shapes
- lifetimes,  $P_{(2)n}$
- exotic decays ( $\beta$ -2p, cluster emission)
- Gamow-Teller strength

MONSTER

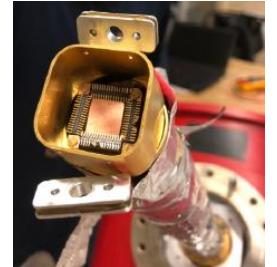

DTAS
