

# Glasgow Site Report (Group Computing)

# Hardware - Users

## Desktops

- ~ 50 'front line' desktop/lab pcs + older pcs
- Mixture of SL5 and WinXP (+legacy SL4 boxes)
- Current spec 3GHz Core2 Duo + 4GB ram

## Laptops

- ~50 laptops (Dell, IBM, Apple)
- Macbook Pros purchased this year (and last)

## Printers

- Kyocera & HP group printers
- Smaller Kyocera printers + HP desktop printer/scanners

# Hardware - Batch

## Local Batch Farm

- Mixture of SL5 & SL4 Nodes
  - SL5: 47 job slots (2.6 GHz Xeon, 2GB/core)
  - SL4: 44 job slots (2.5 GHz Opteron, 2GB/core, ex Scotgrid nodes)
- Torque/maui
- Demand for more nodes - adding more ex Scotgrid nodes
- On/off usage pattern
  - Large number of long jobs at irregular intervals
  - Job suspension and node reservation to allow short jobs a quick turn around

# Hardware - Servers

- 5 1U servers running SL5 with KVM virtualisation
  - Each guest running one service
  - Web, printing, subversion repo, nis, dns, dhcp, ganglia, pakiti etc
- 2 storage machines
  - 48 x 1TB discs, raid 6 ~ 72TB usable storage
  - SL5, xfs filesystem
  - Exported via NFS and Samba
  - More storage early next year
- Windows 2008 terminal and printer server boxes
- Backup – to disc, using dirvish, 6 month history
  - User home areas only (20 GB per user)
- Monitoring
  - Ganglia, Nagios, Pakitik, Nfsen, cacti
- Test AFS Cell Running
  - Next storage machines will run AFS, no more NFS

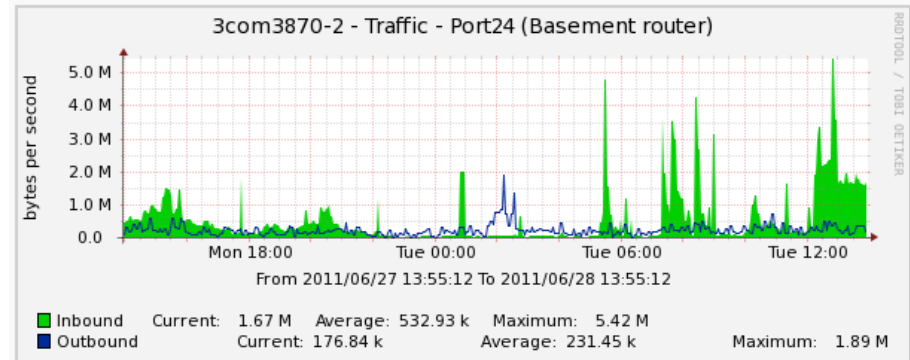

# Networking

- PPE group networking kit separate from Scotgrid and rest of building
  - 194.36.1.0/24 subnet
  - Plus internal private subnet
- Firebridge between PPE network/outside
  - Monitor traffic with softflowd and nfsen
- Monitor internal traffic with cacti

```

# Issues

## Power cuts

- Several power cuts over last year in Kelvin building
  - Some lasting a few minutes some longer
  - Inadvertent tests of the UPS kit and logic
  - Two day shutdown in August to fix the power
- Lessons learnt
  - Not working on the power to a building is not the same as not working on the power infrastructure inside a building
  - Test shutdown logic - have the UPS the switch/router is on go down last – otherwise shutdown messages don't get through
  - UPSes protect servers – some departmental servers not on UPSes got damaged, PPE only lost one desktop

## Email Move

- Department in middle of email move from departmental server to central IT services Exchange server

# Todo List

## Storage

- More needed next year
- AFS transition

## Batch

- More SL5 batch nodes

## Windows 7

- Transition from WinXP to Win7
- Automated install?
