

News – 12.9.2024

ASC conference

Good conference, interesting work presented, with much attention to HTS. Invited overview talk (slides can be found here: <https://cernbox.cern.ch/s/MwiEkICpuzGGB97>). Papers in preparation. Do not forget to send the last version of the paper to IMCC !

ESPPU

Discussion is on-going in the IMCC Coordination Committee as to the form and content of the strategy document (final draft by end of 2024, submission March 2025). Present baseline is to have:

- An extended document with status and R&D demands;
- An executive summary drawn from the extended version;
- In addition, after discussion with partners in the US, a paper describing R&D goals and how these can be integrated in existing programs (EU-HFM, US-MDP) in synergy with other fields (fusion, high field science, NMR and MRI) and studies (FCC-hh).

Next meetings

For the work on solenoid, the proposal is to enlarge participation to the meetings by adding the HFM RD2 mailing list.
