

# WLCG networking

19<sup>nd</sup> September 2024

[edoardo.martelli@cern.ch](mailto:edoardo.martelli@cern.ch)

# Network connectivity

Computing and storage resources at any WLCG site:

- Must be reachable over the **Internet**
- Should be connected to **LHCONE** (highly recommended for Tier1s)
- Tier1s must have a direct link to CERN (**LHCOPN**)

**LHCOPN**

## Private network connecting Tier0 and Tier1s

### Secure:

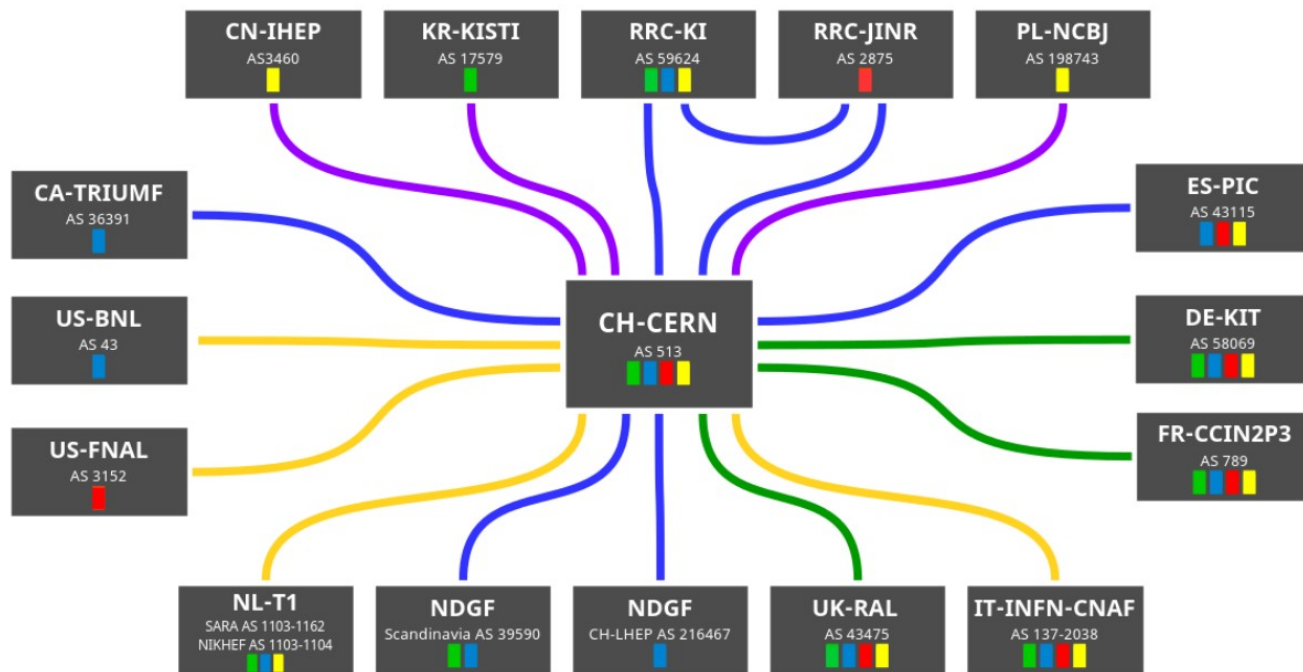

- Dedicated to LHC data transfers
- Only declared IP prefixes can exchange traffic
- Can connect directly to Science-DMZ, bypass perimeter firewalls

### Advanced routing:

- BGP communities for traffic engineering

# LHCOPN

## Numbers

- 17 sites for 15 Tier1s + 1 Tier0
- 14 countries in 3 continents
- 2.86 Tbps to the Tier0
- CN-IHEP, PL-NCBJ and NDFG-LHEP last additions
- TW-ASGC has left

**Line speeds:**  
20Gbps  
100Gbps  
200Gbps  
400Gbps  
800Gbps

**Experiments:**  
= Alice = Atlas  
= CMS = LHCb

**Last update:**  
20240823  
edoardo.martelli@cern.ch

# LHCOPN Traffic – last 12 months

LHCOPN Total Traffic (CERN → T1s)

## Numbers:

Moved ~638 PB in the last 12 months

+18% compared to previous year (540PB)

Peak at ~800Gbps during DC24

# FNAL USA - CMS

# JINR Russia - CMS

# PIC Spain – ATLAS, CMS, LHCb

**LHCONE**

# LHCONE L3VPN service

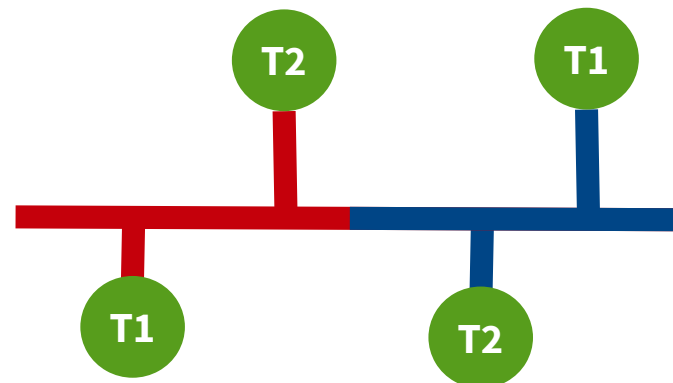

Private network connecting Tier1s and Tier2s

## Secure:

- Dedicated to LHC data transfers
- Only declared IP prefixes can exchange traffic
- Can connect directly to Science-DMZ, bypass perimeter firewalls

## Advanced routing:

- Multi domain L3 VPN
- BGP communities for traffic engineering

# Open to other HEP collaborations

# LHCONE infrastructure

LHCONE Map Ver. 9.0, 2024-03-24 – WeJohnston, ESnet, wej@es.net

- Legend:**
  - Green circle:** LHCONE VRF domain/aggregator
  - Orange circle:** A provider network
  - Blue circle:** Connector network or institution provides, e.g., an L2 path between VRFs.
  - Yellow circle:** Underlined link information indicates link provider, not use
  - Red circle:** Double dash outline indicates distributed site
  - Black circle:** Exchange point
  - Grey circle:** Future site
- Communication links:**
  - 100G+ Spt, 100G+ Apt, 200G+ Spt, 400G+ Rpt, 800G+ 7 Spt
  - 100G Spt, 100G Apt, 200G Spt, 400G Rpt, 800G 7 Spt
  - 100G Spt, 100G Apt, 200G Spt, 400G Rpt, 800G 7 Spt
- International Infrastructure by provider/collaboration:**
  - Green:** ARNET, GEANT
  - Blue:** SINET, TWAREN, Taiwan, ESnet transatlantic, USA
  - Red:** SINET/JGN/ SingAREN
  - Orange:** SINET
  - Yellow:** NORDUnet
  - Light Green:** KIAE, Russia
  - Light Blue:** BELLA: GEANT, et al, RedCLARA, et al
  - Light Orange:** UChi
  - Light Yellow:** LHC Tier 2/3 ATLAS and CMS
  - Light Green:** KEK
  - Light Blue:** Belle II Tier 1/2
  - Light Orange:** JUNO
- Other:**
  - ANA-300/400:** Various links provided by CANARIE, ESnet, GEANT, Internet2, NORDUnet, SURFNet, SINET, IU/NSF
  - Standalone VRFs:** UChi, KEK, JUNO

- Notes:**
  - ONLY links involved in LHCONE are shown
  - LHCOPN links are not shown in this diagram
  - For map explanation see "Introducing the LHCONE v.9" <https://www.dropbox.com/sh/padk0t0...>
  - GEANT and CANARIE have shutdown the peering between their VRF and KIAE, as a result of the Ukraine war.

- Legend:**
  - Green circle:** LHCONE VRF domain/aggregator
  - Orange circle:** A provider network
  - Blue circle:** Connector network or institution provides, e.g., an L2 path between VRFs.
  - Yellow circle:** Underlined link information indicates link provider, not use
  - Red circle:** Double dash outline indicates distributed site
  - Black circle:** Exchange point
  - Grey circle:** Future site
- Communication links:**
  - 100G+ Spt, 100G+ Apt, 200G+ Spt, 400G+ Rpt, 800G+ 7 Spt
  - 100G Spt, 100G Apt, 200G Spt, 400G Rpt, 800G 7 Spt
  - 100G Spt, 100G Apt, 200G Spt, 400G Rpt, 800G 7 Spt
- International Infrastructure by provider/collaboration:**
  - Green:** ARNET, GEANT
  - Blue:** SINET, TWAREN, Taiwan, ESnet transatlantic, USA
  - Red:** SINET/JGN/ SingAREN
  - Orange:** SINET
  - Yellow:** NORDUnet
  - Light Green:** KIAE, Russia
  - Light Blue:** BELLA: GEANT, et al, RedCLARA, et al
  - Light Orange:** UChi
  - Light Yellow:** LHC Tier 2/3 ATLAS and CMS
  - Light Green:** KEK
  - Light Blue:** Belle II Tier 1/2
  - Light Orange:** JUNO
- Other:**
  - ANA-300/400:** Various links provided by CANARIE, ESnet, GEANT, Internet2, NORDUnet, SURFNet, SINET, IU/NSF
  - Standalone VRFs:** UChi, KEK, JUNO

# LHCONE status

- **VRFs: 30 national and international Research Networks**
- **Connected sites: ~110 in Europe, North and South America, Asia, Australia**
- Trans-Atlantic connectivity provided by ESnet, GEANT, Internet2, RedCLARA, NORDUnet, CANARIE and SURF
- Trans-Pacific connectivity provided by KREOnet, SINET, TransPAC
- Interconnections at Open Exchange Points including NetherLight, StarLight, MANLAN, WIX, CERNlight, Hong Kong, Singapore and others

# Network information in CRIC

CRIC (Computing Resources Information Catalogue) is the database used by WLCG to document the available resources. It is used also to store network information related to LHCOPN and LHCONE

## **Easily accessible**

- Netsite: <https://wlcg-cric.cern.ch/core/netsite/list/> (login required)
- NetworkRoute: <https://wlcg-cric.cern.ch/core/networkroute/list/> (login required)
- Json view: <https://wlcg-cric.cern.ch/api/core/rcsite/query/?json> (no login)

**How to connect**

# Prerequisites

A WLCG facility must have:

- **Public IPv4 and IPv6 addresses**
- **A public Autonomous System number (ASN, a network identifier assigned by RIPE)**
- **A BGP capable router**

All of them can be provided by the local National Research & Education Network (NREN) provider

# Physical connection

The WLCG facility has to:

- agree with the local NREN about how and where to connect to closest Point of Presence (PoP)
- LHCOPN: request a direct link to CERN
- LHCONE: connect to the closest LHCONE access router

# LHCONE Acceptable Use Policy (AUP)

Use of LHCONE must be restricted to WLCG related traffic

IP addresses announced to LHCONE:

- should be assigned only to WLCG servers
- cannot be assigned to generic campus devices (desktop and portable computers, wireless devices, printers, VOIP phones....)

<https://twiki.cern.ch/twiki/bin/view/LHCONE/LhcOneAup>

# LHCONE Routing setup

- A BGP peering is established between the WLCG site router and the closest LHCONE access router
- The site router announces only the IP subnets used for WLCG servers
- The site router accepts all the prefixes announced by the LHCONE access router
- The site router must ensure traffic symmetry: injects only packets sourced by the announced subnets

# LHCOPN Routing setup

- A BGP peering is established between the WLCG site router and the CERN LHCOPN border router
- The WLCG site router announces only the IP subnets used for WLCG servers
- The WLCG site router accepts all the prefixes announced by the CERN router
- The WLCg site router must ensure traffic symmetry: injects only packets sourced by the announced subnets
- LHCOPN can be used to reach all the other Tier1s (transit via CERN)

# AMRES Serbian NREN

AMRES should be the main contact to provide LHCOPN and LHCONE connectivity

## LHCONE:

- AMRES can implement an LHCONE instance for all Serbian sites and then connect it to the LHCONE backbone provided by GEANT

or

- AMRES can provide a L2 connection from the data-centre to the closest GEANT LHCONE access router

## LHCOPN:

- AMRES should work with GEANT to provide the direct link from the Tier1 data-centre to CERN

# GEANT

# CNAF-CERN DCI

The LHCOPN link of IT-INFN-CNAF Tier1 is implemented using shared spectrum

- spectrum sharing over GEANT and GARR dark fibres

- 4x100Gbps links between CERN and CNAF used for DC24 and now in production

- cost effective technique to get >1Tbps LHCOPN connections already today

# WLCG Data Challenges

# Data Challenges for HL-LHC

## **WLCG has planned for a series of data challenges to prepare for HL-LHC data taking**

- Demonstrate readiness for the expected HL-LHC data rates with:
  - Increasing volume/rates
  - Increase complexity (e.g. additional technology)
- A data challenge roughly every two years

**2021: 10%** of HL-LHC requirements (*480Gbps minimal – 960Gbps flexible*)

**2024: 25%** of HL-LHC requirements (*1.2Tbps minimal – 2.4Tbps flexible*)

**2026/7: 50%** of HL-LHC requirements (*date and % to be confirmed*)

**2028/9: 100%** of HL-LHC requirements (*date and % to be confirmed*)

**2030:** start of HL-LHC (Run4) (*4.8Tbps minimal – 9.6Tbps flexible*)

# HL-LHC network requirements

## **ATLAS & CMS T0 to T1 per experiment**

- 350PB raw data per year; average of 50GB/s or 400Gbps during LHC running time
- Another 100Gbps estimated for prompt reconstruction data tiers (AOD, other derived output)
- estimated 1Tbps for CMS and ATLAS summed

## **ALICE & LHCb T0 Export**

- 100 Gbps per experiment, estimated from Run-3 rates

## **Minimal Model**

- Sum (ATLAS,ALICE,CMS,LHCb)\*2(for bursts)\*2(safety-margin) =  
**4.8Tbps expected HL-LHC bandwidth**

## **Flexible Model**

- Experiments may need to reprocess and reconstruct the collected data during the year
- This requires doubling the bandwidth of the Minimal model:  
**9.6Tbps expected HL-LHC bandwidth**

# Overall network requirements for HL-LHC

## **Each Major Tier1s:**

1 Tbps to the Tier0 (LHCOPN)

1 Tbps to the Tier2s (aggregated, LHCONE)

## **Each Major Tier2s:**

>400 Gbps (LHCONE)

Over provisioning main not always be an option on transoceanic routes. More efficient technology may be needed

# DC21

Mostly production transfers. Flexible model reached for a short time

# DC24

**Achieved full throughput of minimal model. Flexible model achieved only for short time.**

WLCG Throughput ⓘ

	max	avg	current
Data Challenge	2.19 Tb/s	1.02 Tb/s	211 Gb/s
atlas	625 Gb/s	304 Gb/s	567 Gb/s
alice xrootd	349 Gb/s	115 Gb/s	71.4 Gb/s
cms xrootd	191 Gb/s	67.4 Gb/s	42.7 Gb/s
cms	271 Gb/s	57.2 Gb/s	75.0 Gb/s
belle	38.9 Gb/s	9.45 Gb/s	17.1 Gb/s

# DC24 results: applications

- Ran 12-23 February 2024
- Real data moved disk-to-disk using production applications:  
ad-hoc transfers on top of production traffic
- Applications pushed to uncharted levels showed unexpected limitations
- Using tokens for authorization added instabilities, but testing at such scale it was a necessary step to take

# DC24 results: Networking

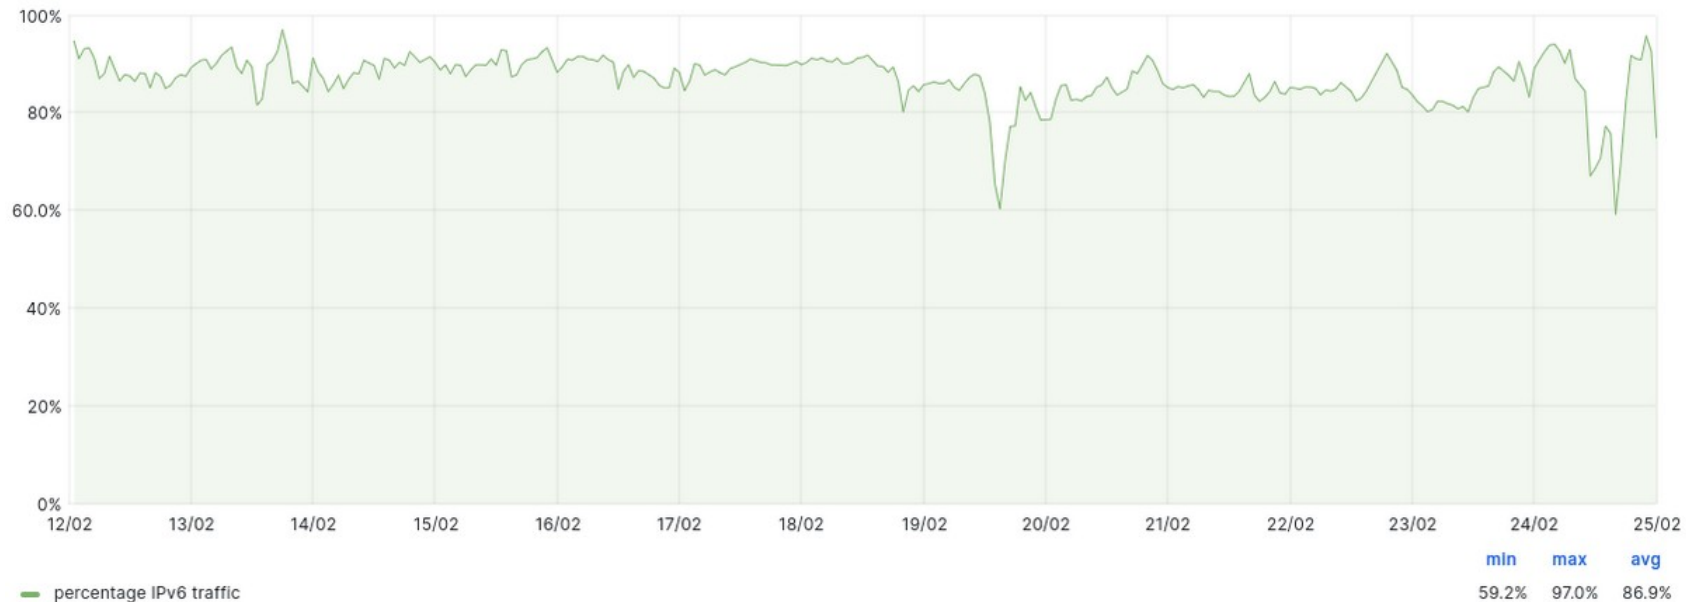

- **Global Research & Educations (REN) networks demonstrated more than sufficient capacity and reliability during DC24 and were NOT a bottleneck for any of the experiments.**  
Unexpected undersea cable cuts properly backed-up by alternative connectivity
- Some sites did identify local network bottlenecks or non-optimal architectures
- Various network technologies (NOTED, SENSE, BBR, perfSONAR, SciTags, Spectrum sharing...) were successfully tested during DC24 and showed promising results, now working to put them into production.
- Efforts to better monitor networks has become part of WLCG operational toolkits
- Regular mini-challenges will be run to track progress and prepare for DC26/7
- Storage infrastructure and middleware are being improved and the networks need to keep pace.  
Bandwidth upgrades may be needed for DC26/7

# DC24 Network measurements: IPv6

- IPv6 Traffic in LHCOPN: 86.9% of the total
- Some sites testing IPv6 because of IPv4 scarcity

IPv6 / Total (in+out, %) in LHCOPN

# Meetings

LHCOPN and LHCONE meetings:

- Every six months
- Upcoming meetings:
  - 9-11 of October 2024 in Beijing CN
  - April 2025 in UK
