

Dear colleagues,

We are pleased to announce that the 25th Coated Conductor for Applications Workshop (CCA-25) will be hosted by CERN and the University of Geneva at CERN (Meyrin, CH) from March 11 to March 13, 2025. Please save the date to your calendar.

Following the tradition of previous successful meetings, we plan three days of full immersion into the latest advances, challenges, and opportunities in coated conductor material science, manufacturing, and applications. The workshop will bring together researchers working on all aspects of coated conductors—materials, testing, devices, and applications—in an informal and stimulating setting.

A specific focus of CCA-25 will be on addressing how to sustain the growing interest sparked by recent efforts toward compact fusion projects, which have now extended into other fields of scientific and societal applications.

Given the dynamic nature of this field, we strongly encourage students and early-career professionals to participate, as this workshop will provide a valuable opportunity for networking and professional development. To facilitate their entry in the field we plan a short course to take place on March 10, dedicated to students and early career professionals.

Please note that participation is moderated. Interested professionals and students will have the possibility to submit abstracts for potential talks. Details regarding abstracts submission will be provided shortly.

For more information, please visit the dedicated Indico page:
<https://indico.cern.ch/event/1347361/>

We look forward to your participation.

Kind regards,

Michela for the program committee
