

Comments on MEDICIS future

S. Gilardoni, T. Stora, M. Lamont – CERN

MEDICIS collaboration board Dec. 2024

MEDICIS future timeline

- **Seeking approval for providing isotopes for clinical trials in external institutes**
 - Pre-discussion at Council this week with Director of Accelerators presentation
 - Second step for approval → document to be presented to Council in March
 - Document being prepared with Legal Service to explain scope, risks and legal framework for CERN
 - Special framework being defined for recipients which are not members of the collaboration
 - **Important:** CERN qualifies and measure the isotopes only for their transport, never for the final use. The isotope quality assurance control for their final use **must** happen in the receiving institutes.
- **Seeking approval for operation until 2030**
 - Presentation in fall at the CMASC committee → support to the extension request to be presented in the 2025 CERN financial exercise (MTP – Medium Term Plan). Exercise typically ending in March 2025.
 - CERN internal financial document including M and P being prepared with CERN management.
 - Decision on extension (positive or negative) expected during Q1 2025
 - Defining in collaboration with KT a framework to provide isotopes to industry
