Projet M^{gt}: What to do at the very initial stage : Identifying Stakeholders & collect their inputs

Stakeholder table					
Person	**What do they bring to the project** (Competencies, domain, help, experience etc...)	**What do they get from the project** (How are they interested or not by / in the project)	**He / She seems** **- supportive** **- neutral** **- hostile ?**	**What are their proposal regarding some milestones, ideas or remarks.** (List all their inputs, remarks which can help for next steps: Mandate & Milestones)	**How will you involve them ?**
Name First Name	Experience :(a similar system was designed in their group). Help : They have a fellow at disposal. Competencies : They know the software we want to dig in.	They are waiting for this project to end, since it will lower the pressure on their side.	positive	- Suggestion of a proof of concepts. - Indicate a similar system exists - Propose an extension to the software to…	They will be a major partner for the project. They will act as beta tester, and they will provide a lot of interesting inputs when defining the project. They can also inject people resources.
