Beam-Beam Effects in Hadron Colliders

Friday 20 June 2025 09:40 (1 hour)

The electromagnetic interaction of the two beams on each other, so-called beam-beam force, is one of the main limitations in view of reaching the highest luminosity. In this lecture, we cover the main models to describe the beam-beam effect that drive the design of modern colliders as well as various strategies to push the performance beyond existing machines.

Presenter: BUFFAT, Xavier (CERN)
