Inspecting BLM threshold with rescaled losses

Quick recall of the steps used to perform this analysis:

- From a lossmap, gather the peak loss in W from FastBCT signal
- Evaluate BLM Gy rescaling factor from observed peak power loss (1200kW / observed loss)
- Apply rescaling factor to BLM signal observed @ peak loss time - bkg signal
- Compare rescaled BLM signals and RS with:
 - Original thresholds applied
 - Original thresholds with Monitor Factor considered (i.e. threshold / monitor_factor)
- Plots shown are currently considering RS from 4 and above (but data for lower RS is available as well!)

Ratios for relaxed settings, monitor factor removed

Rescaled Ratios @1200kW for BLMs in B1H Relaxed, Monitor Factor Removed, RS from 4 and above

Clear strong leakage in IR6 when considering H plane

Rescaled Ratios @1200kW for BLMs in B1V Relaxed, Monitor Factor Removed, RS from 4 and above

In V plane, situation looks more under control...

Ratios for Nominal settings, monitor factor removed

Rescaled Ratios @1200kW for BLMs in B1H Nominal, Monitor Factor Removed, RS from 4 and above

IR6 losses still present in H plane

Rescaled Ratios @1200kW for BLMs in B1V Nominal, Monitor Factor Removed, RS from 4 and above

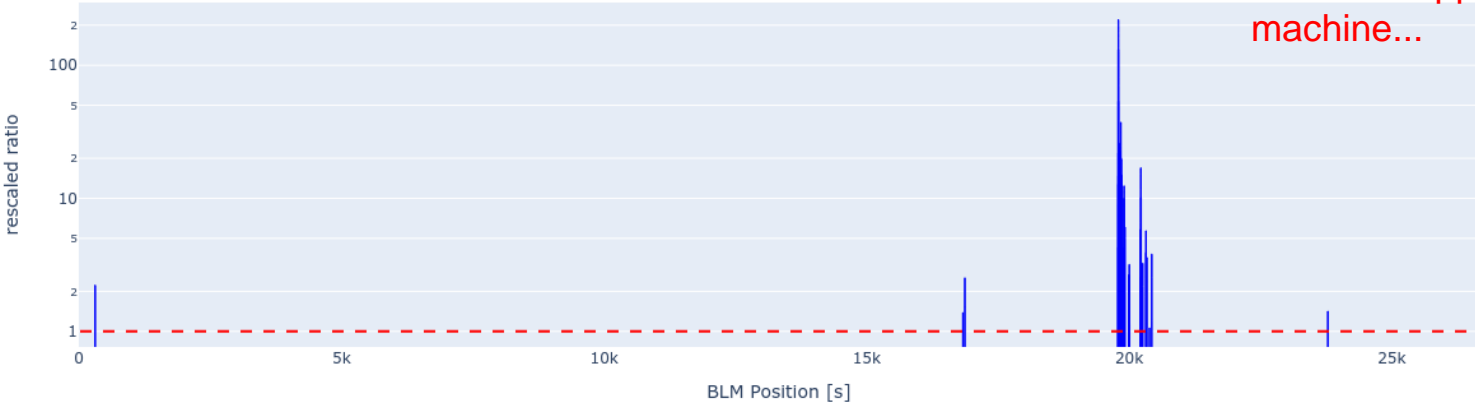

Ratios for relaxed settings, monitor factor kept

Rescaled Ratios @1200kW for BLMs in B1H Relaxed, Monitor Factor Kept, RS from 4 and above

For completeness, thresholds with original monitor factors can be considered

Rescaled Ratios @1200kW for BLMs in B1V Relaxed, Monitor Factor Kept, RS from 4 and above

In this case, individual BLMs above threshold appear around the machine...

Ratios for nominal settings, monitor factor kept

Rescaled Ratios @1200kW for BLMs in B1H Nominal, Monitor Factor Kept, RS from 4 and above

Rescaled Ratios @1200kW for BLMs in B1V Nominal, Monitor Factor Kept, RS from 4 and above
