

The 18th International Workshop on Tau Lepton Physics (TAU2025)

Monday 20 October 2025 - Friday 24 October 2025

Marseille

Scientific Programme

Welcome to the 18th in a series of international workshops devoted to the physics of the tau lepton and its associated neutrino. The goal of the workshop is to bring theorists and experimentalists together to discuss recent progress in the field. Recent results on tau lepton production and decays at lepton and hadron colliders will be presented, as well as recent results from $g-2$ and neutrino oscillation experiments. The program will also include properties of tau leptons, lepton universality and flavor violation, precision electroweak physics, QCD, CP violation, and electromagnetic dipole moments. Review of current results and future opportunities will be discussed.
