

Systems Thinking & Mapping

Systems Thinking

A way to understand how different parts of a system interact and influence each other, considering the whole system rather than individual components.

TOOLS OF A SYSTEM THINKER

THE ICEBERG MODEL as learned from PETER SENGE & JOHN STERMAN

THE ICEBERG

A Tool for Guiding Systemic Thinking

EVENTS

What just happened?

React

PATTERNS/TRENDS

What trends have there been over time?

Anticipate

UNDERLYING STRUCTURES

*What has influenced the patterns?
What are the relationships between the parts?*

Design

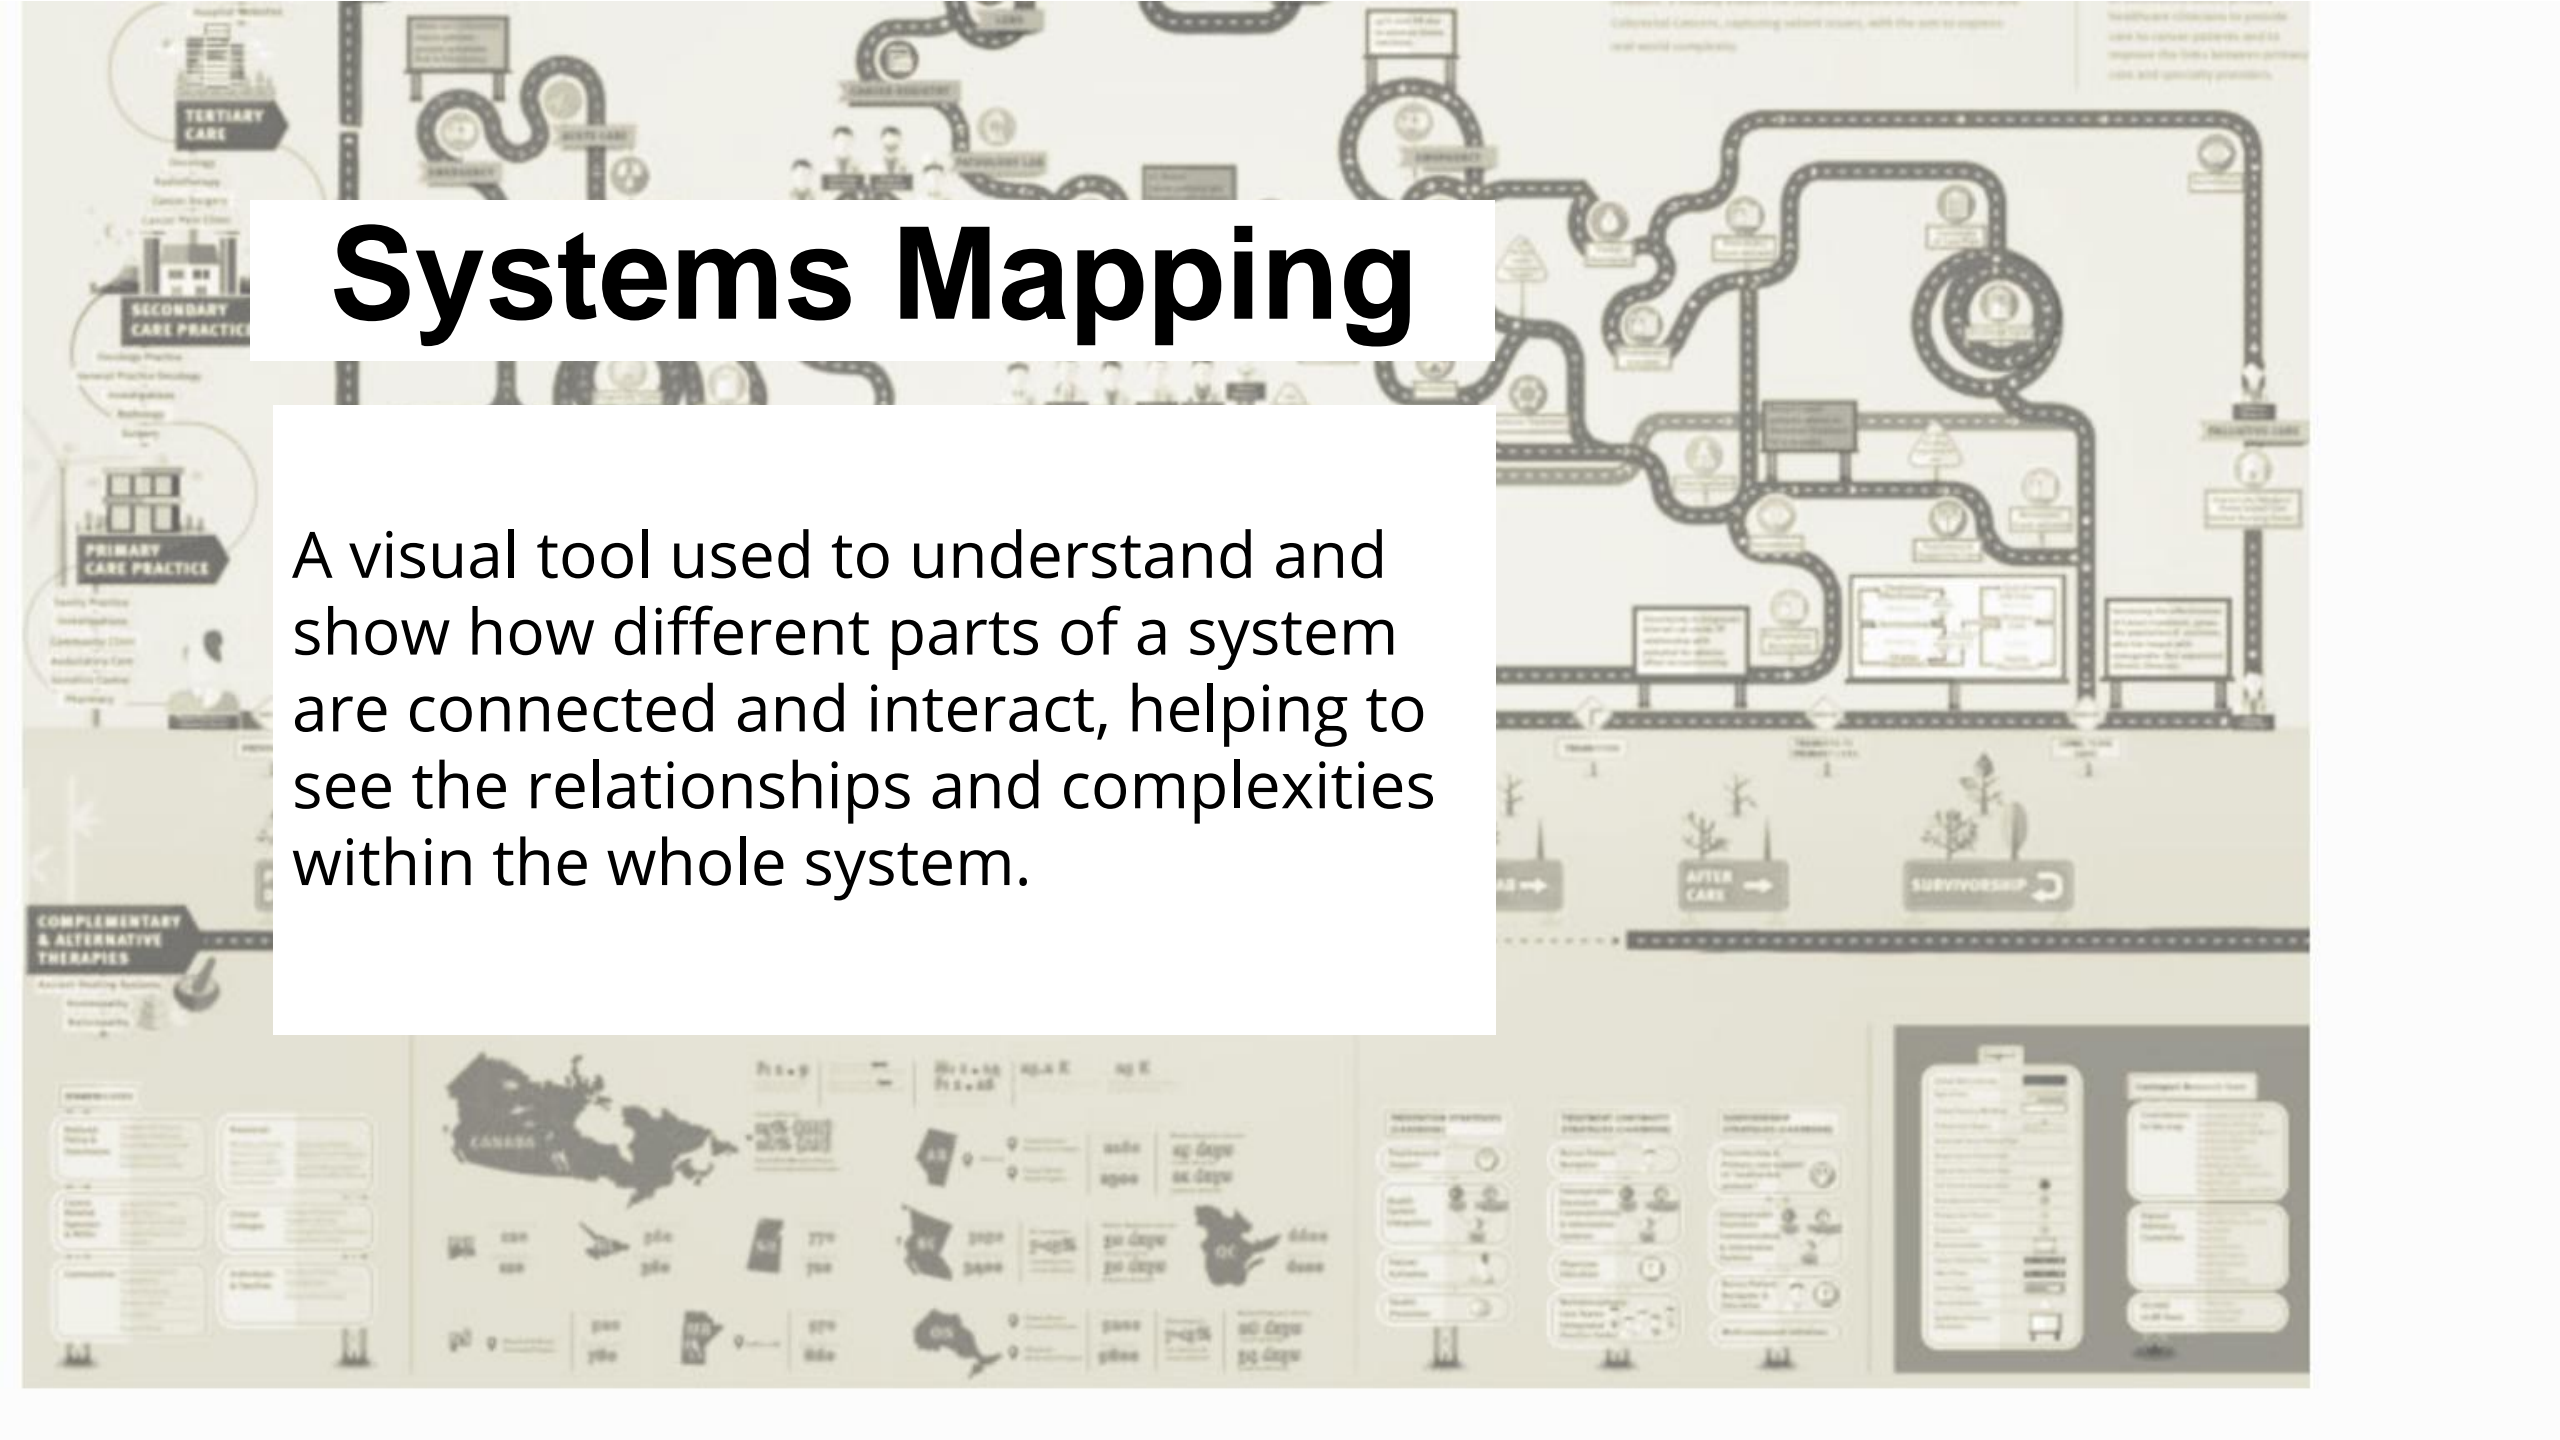

MENTAL MODELS

*What assumptions, beliefs and values do people hold
about the system? What beliefs keep the system in place?*

Transform

Systems Mapping

A visual tool used to understand and show how different parts of a system are connected and interact, helping to see the relationships and complexities within the whole system.

TYPES OF SYSTEM MAPPING

BEHAVIOUR OVER
TIME GRAPHS

System Map

water infrastructure - Level 1

Erban and Walker (2019)
doi: 10.3389/fbuil.2019.00124

System Map

water infrastructure

Level 2

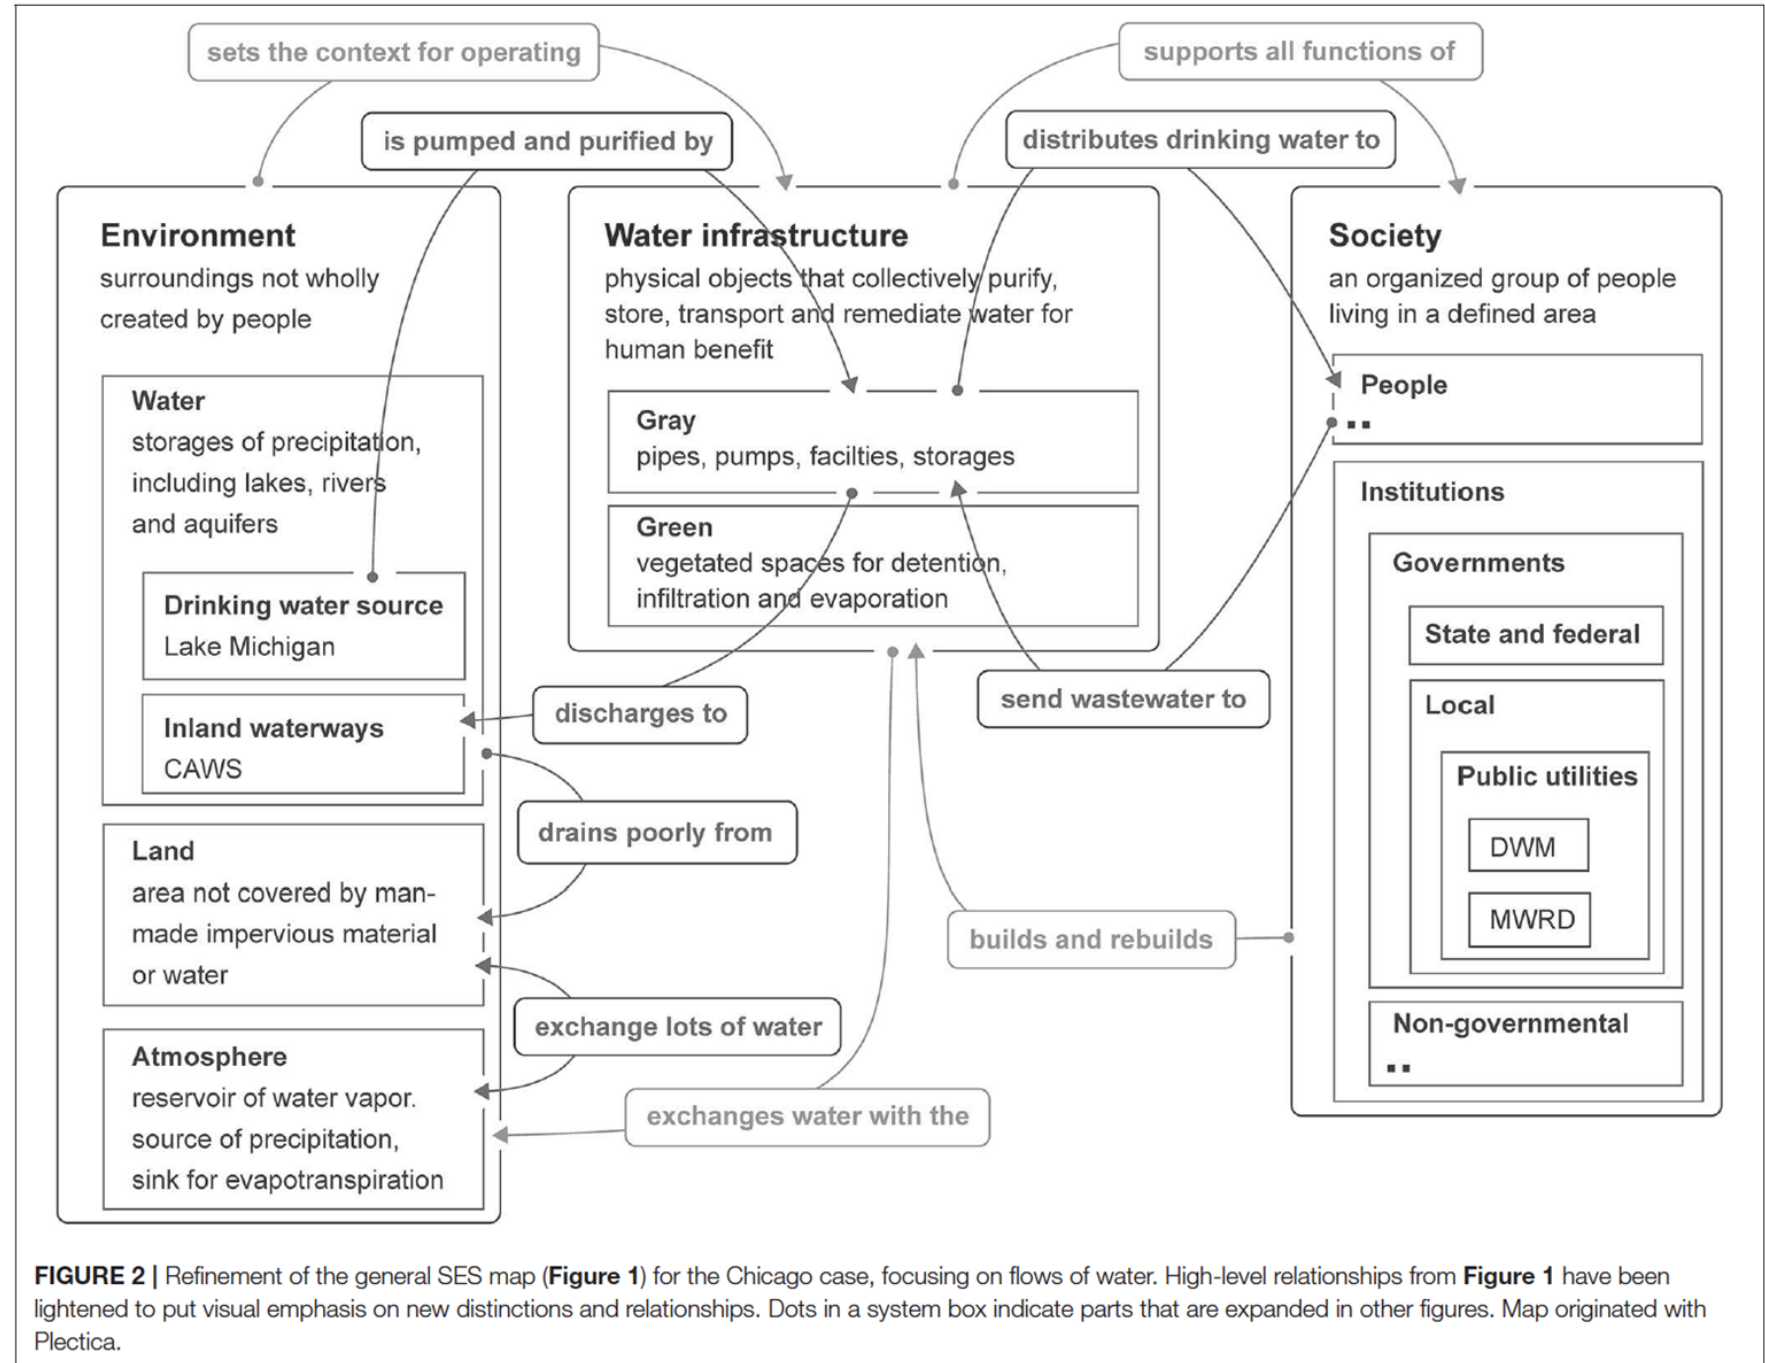

FIGURE 2 | Refinement of the general SES map (Figure 1) for the Chicago case, focusing on flows of water. High-level relationships from Figure 1 have been lightened to put visual emphasis on new distinctions and relationships. Dots in a system box indicate parts that are expanded in other figures. Map originated with Plectica.

System Map water security data system

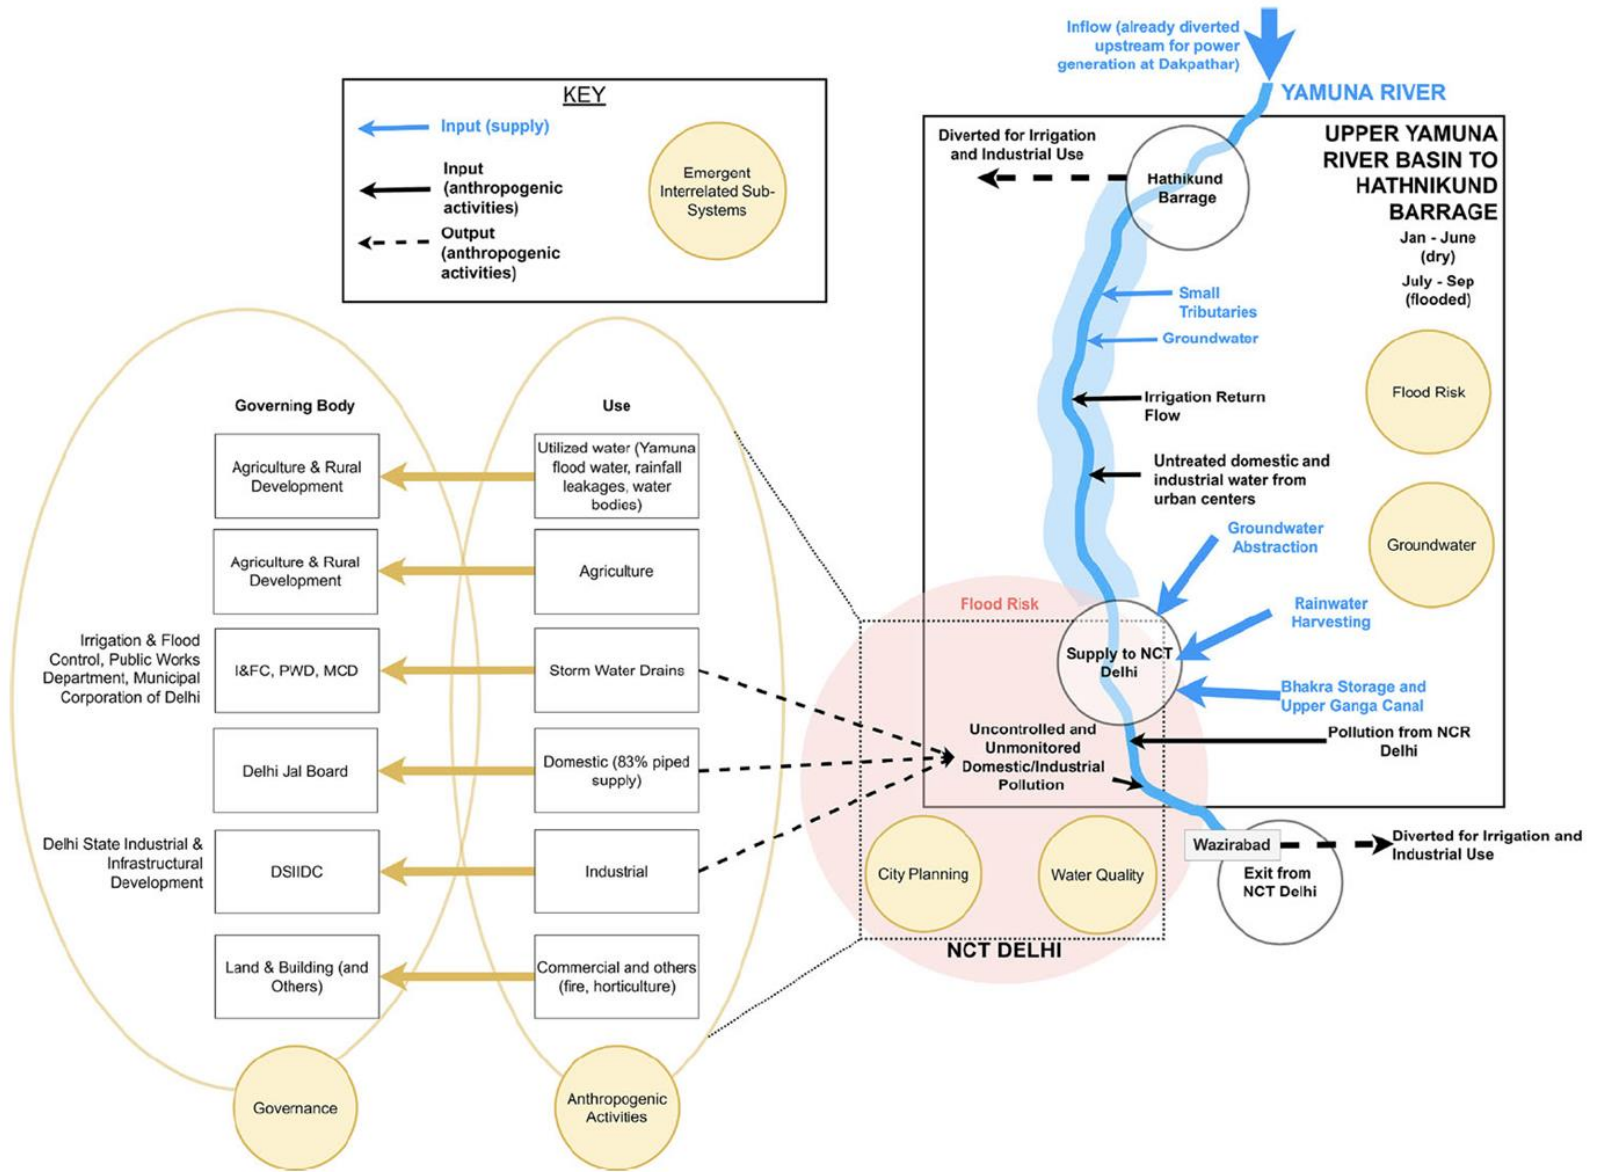

Figure 2. Upper Yamuna River Basin (UYRB) Water Security Data System from National Capital Territory (NCT) Delhi to Hathnikund Barrage.

Social Ecosystem Map

Peter Jones & Kristel Van Ael (2022)

Social Ecosystem Map

Peter Jones & Kristel Van Ael (2022)

Interpersonal: Individual actors;

Microsystem: everyday social context in the geography and society - e.g. workplaces, neighborhoods;

Mesosystem: structured community and organizational settings - e.g. company structure, schools, the local community in a city;

Exosystem: companies, industry, healthcare institutions, municipal or regional government;

Macrosystem: national culture, political context, economy, factors influencing quality of life - e.g. information and media sources, population demographics;

Bio-ecosystem: natural environment - e.g. watersheds, health of flora and fauna, biodiversity, pollution effects;

'force lines' indicate relational dynamics within and across levels

Mapping Exercise

Let's dive deeper and explore how we can map out systems in different ways.

1. Choose an opportunity card as a team (10 mins)
2. Share and review the information on the opportunity card (10 mins)
3. Map the systems related to the opportunity card using the Social Ecosystem Map structure (30 mins)
