

*The application of near infrared spectroscopy
and hyperspectral imaging for the quality
assessment of fruits*

and Quality - BSc

Food Process Design - MSc

Science Strategy Analyst
Research Fellow

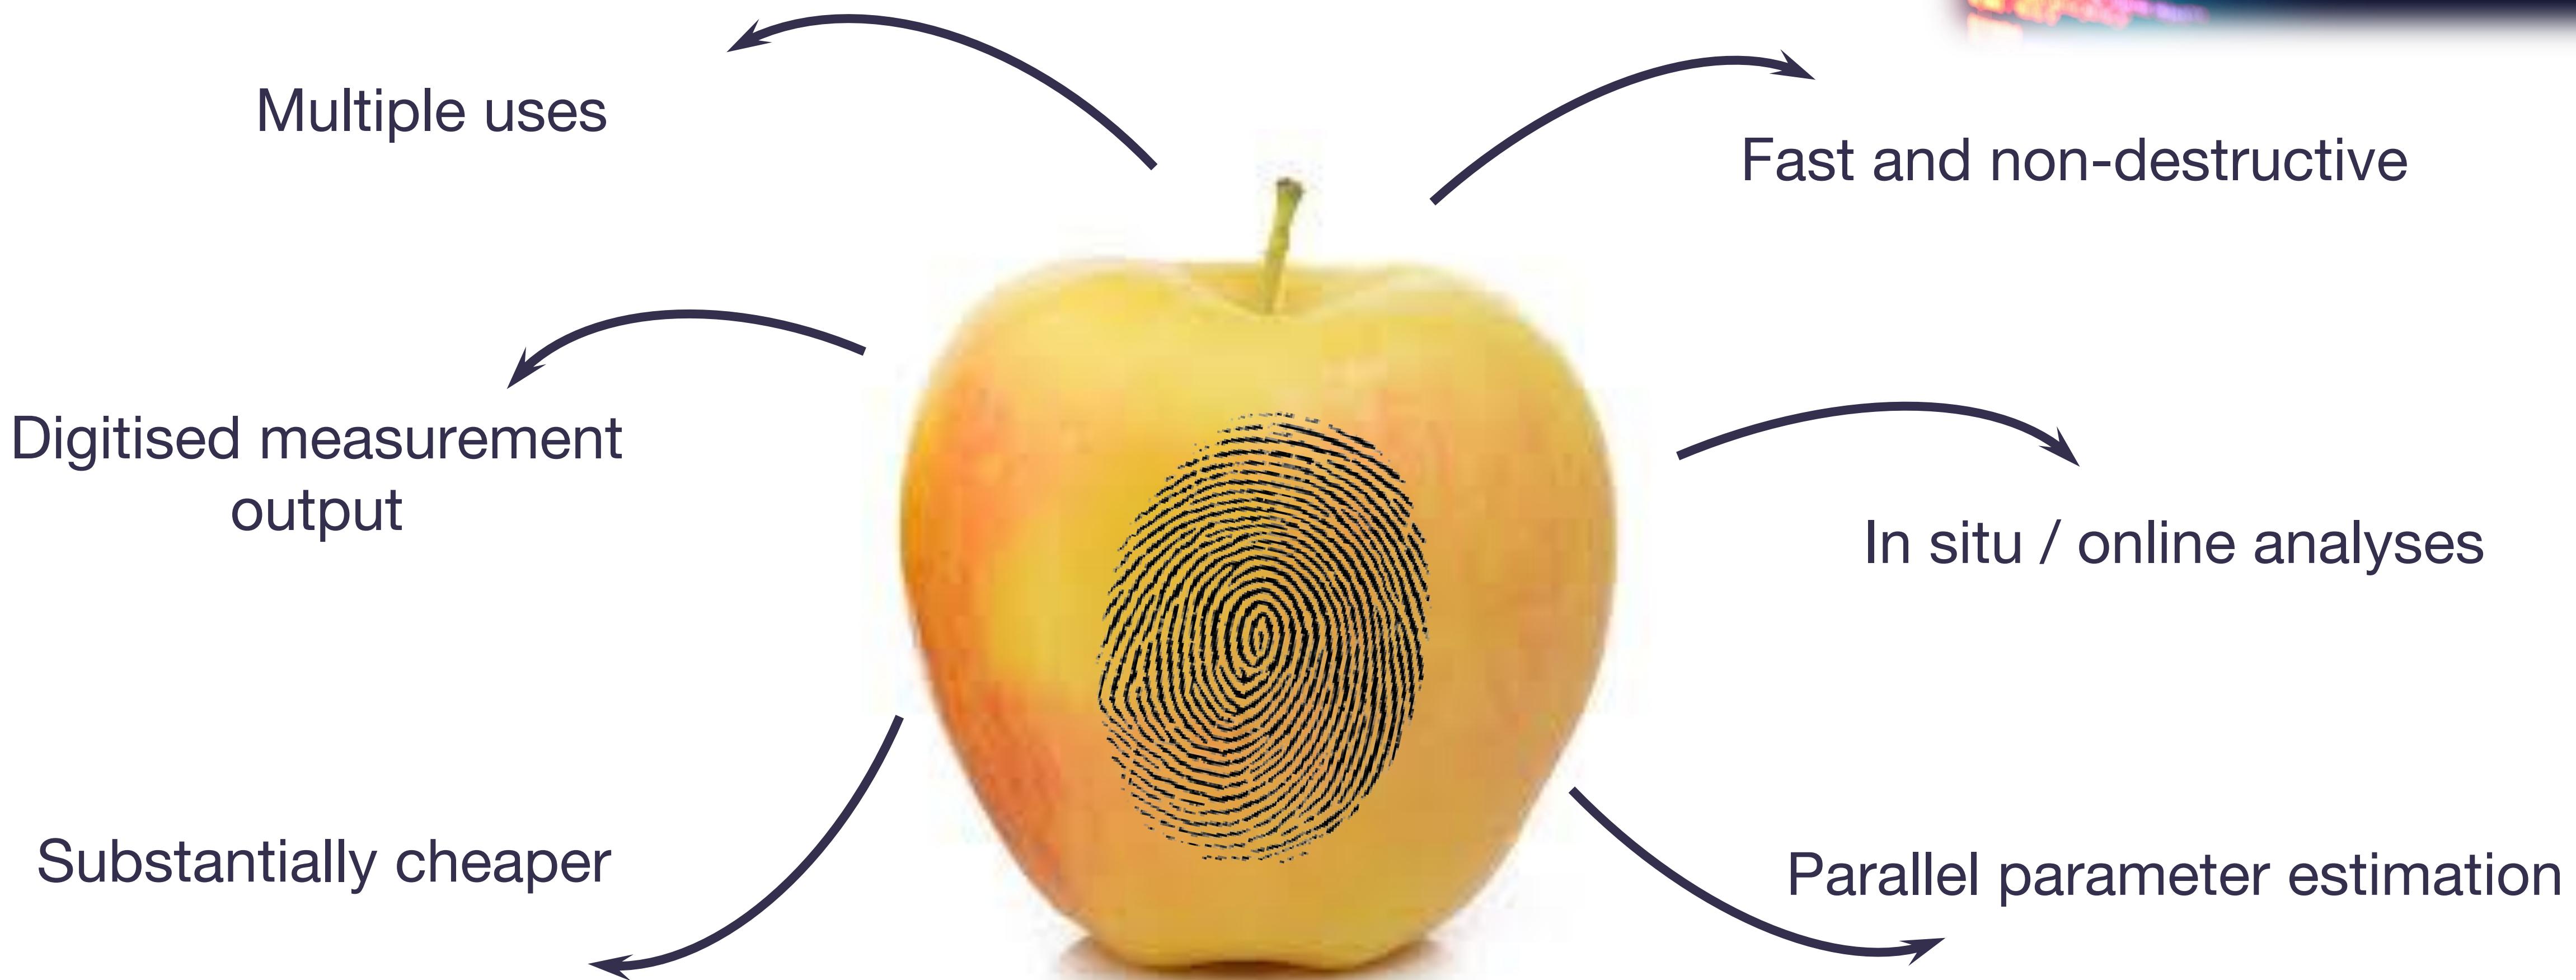

Challenges from farm to fork...

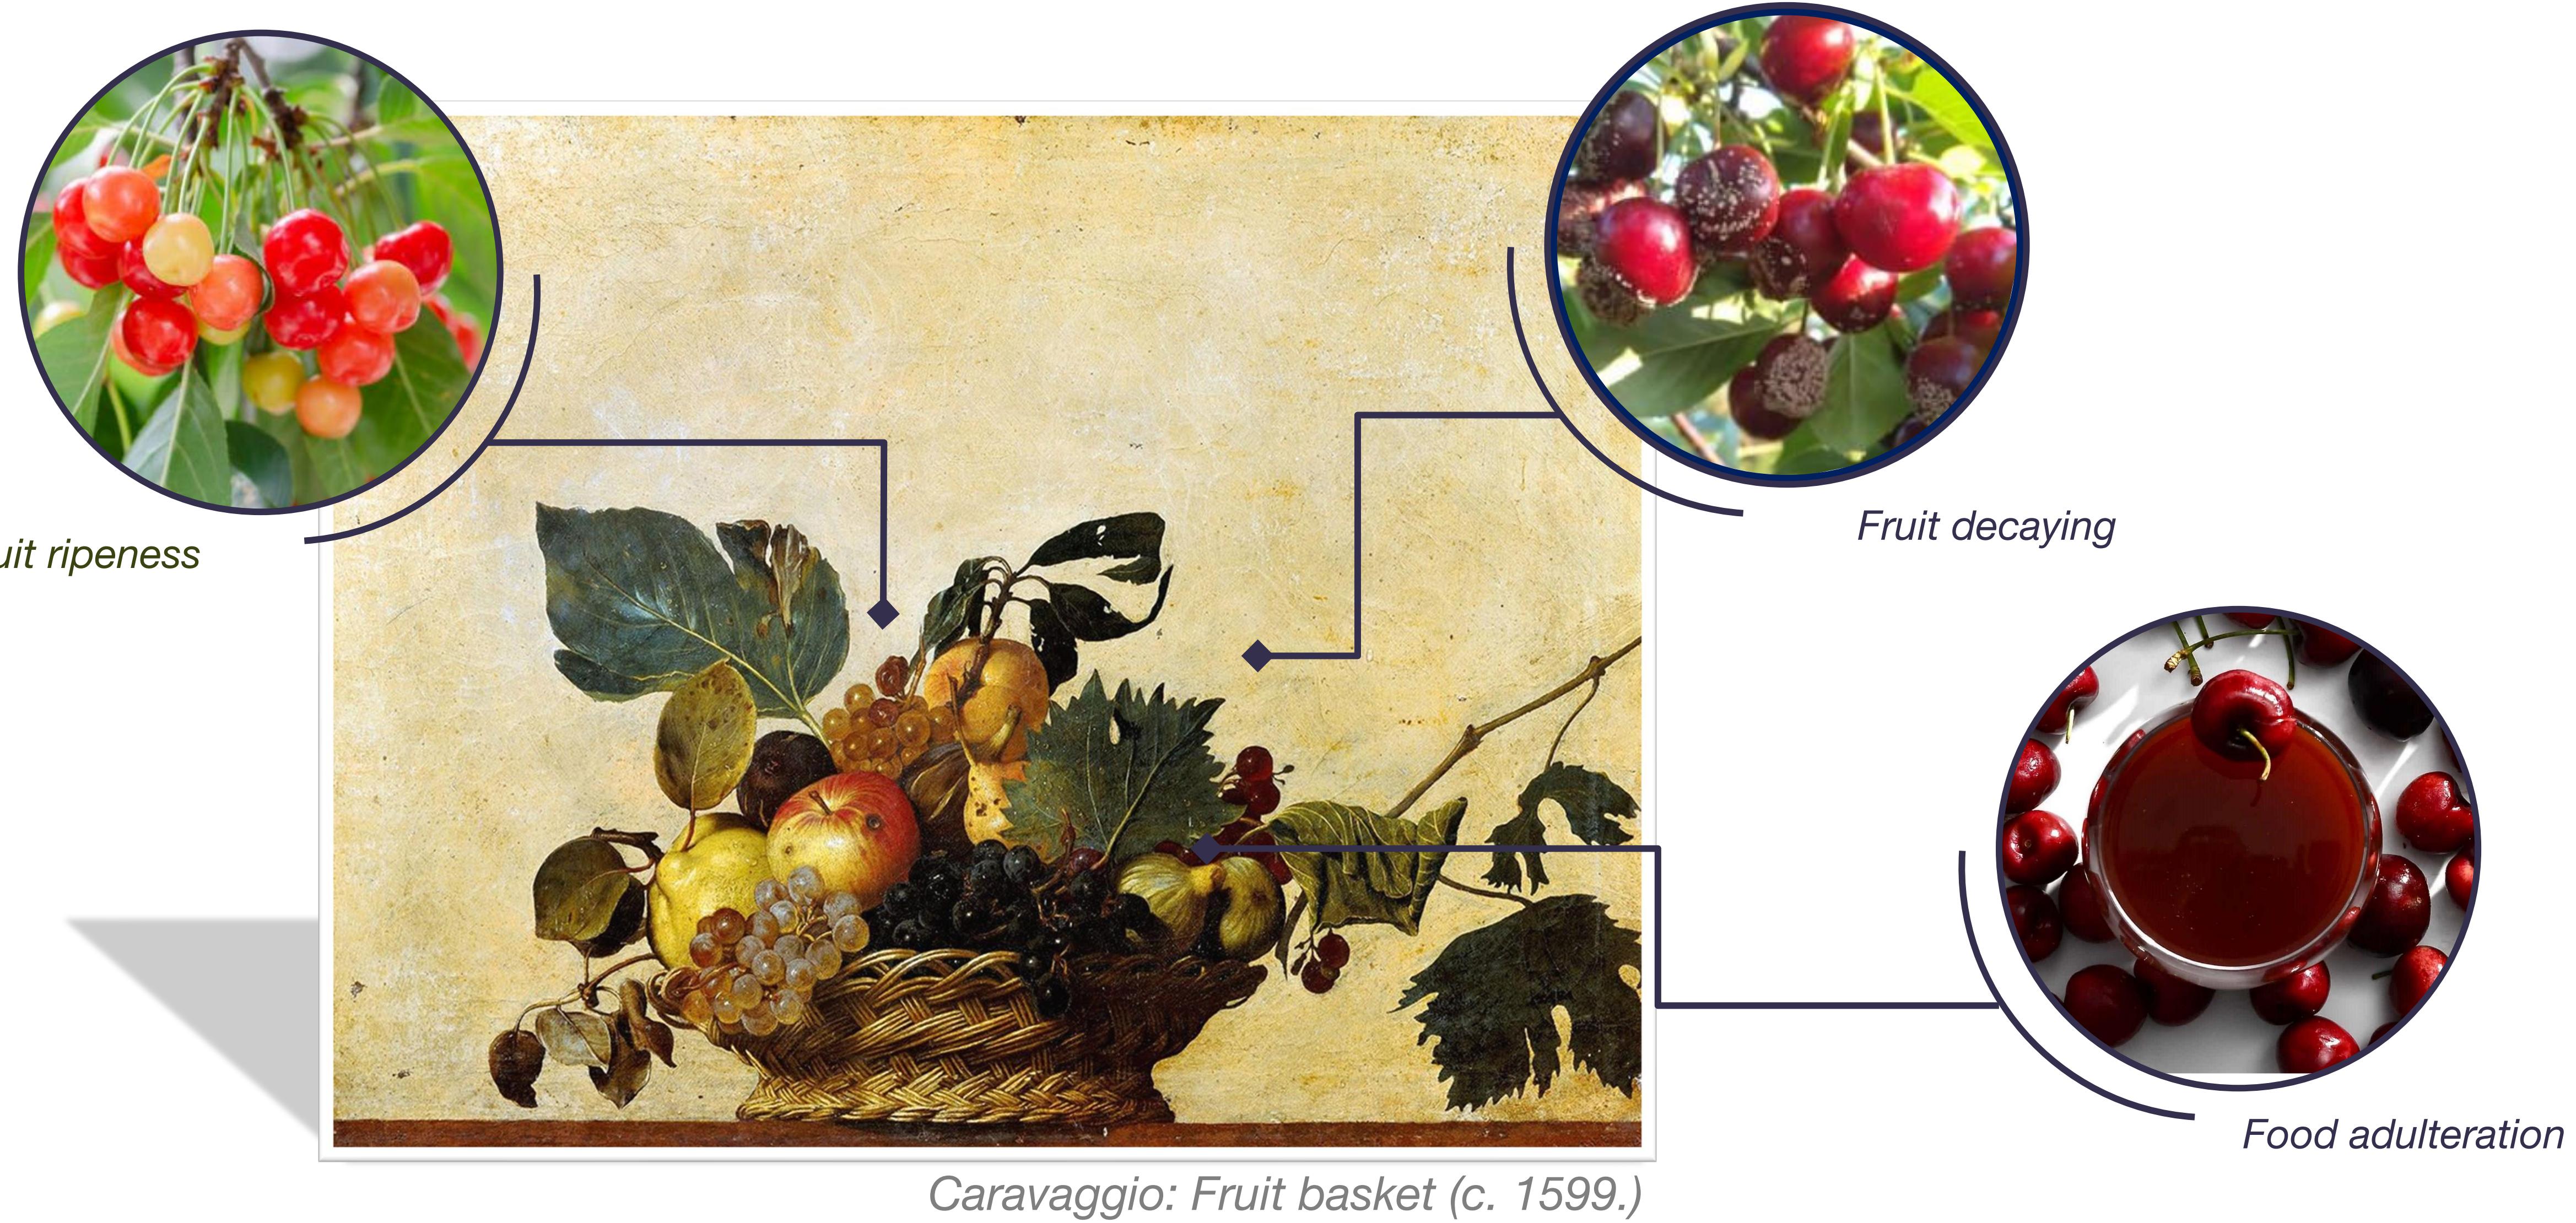

...Generally in food quality control...

...About non-targeted methods...

In the focus of my researches... fruits

Preparation of fruit ripeness studies

Sweet cherries

Bigarreau
Burlat

Valerij
Cskalov

Sour cherries

Kántorjánosi

Újfehértói

Plums

Elena

Stanley

Golden

Idared

Green ripe ➤ ➤ ➤ fully ripe fruits

Reference quality attributes

- Colour properties – L* a* b*
- Dry matter content
- Soluble solids
- Total acidity
- Total anthocyanin content

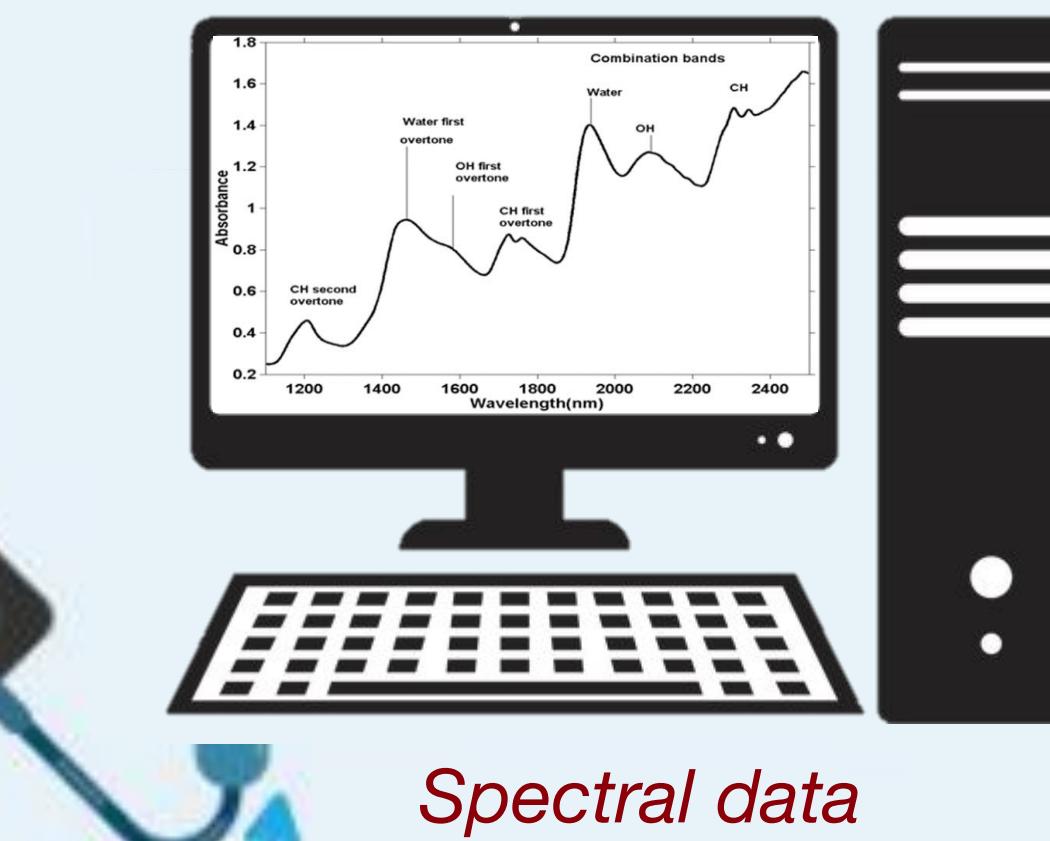

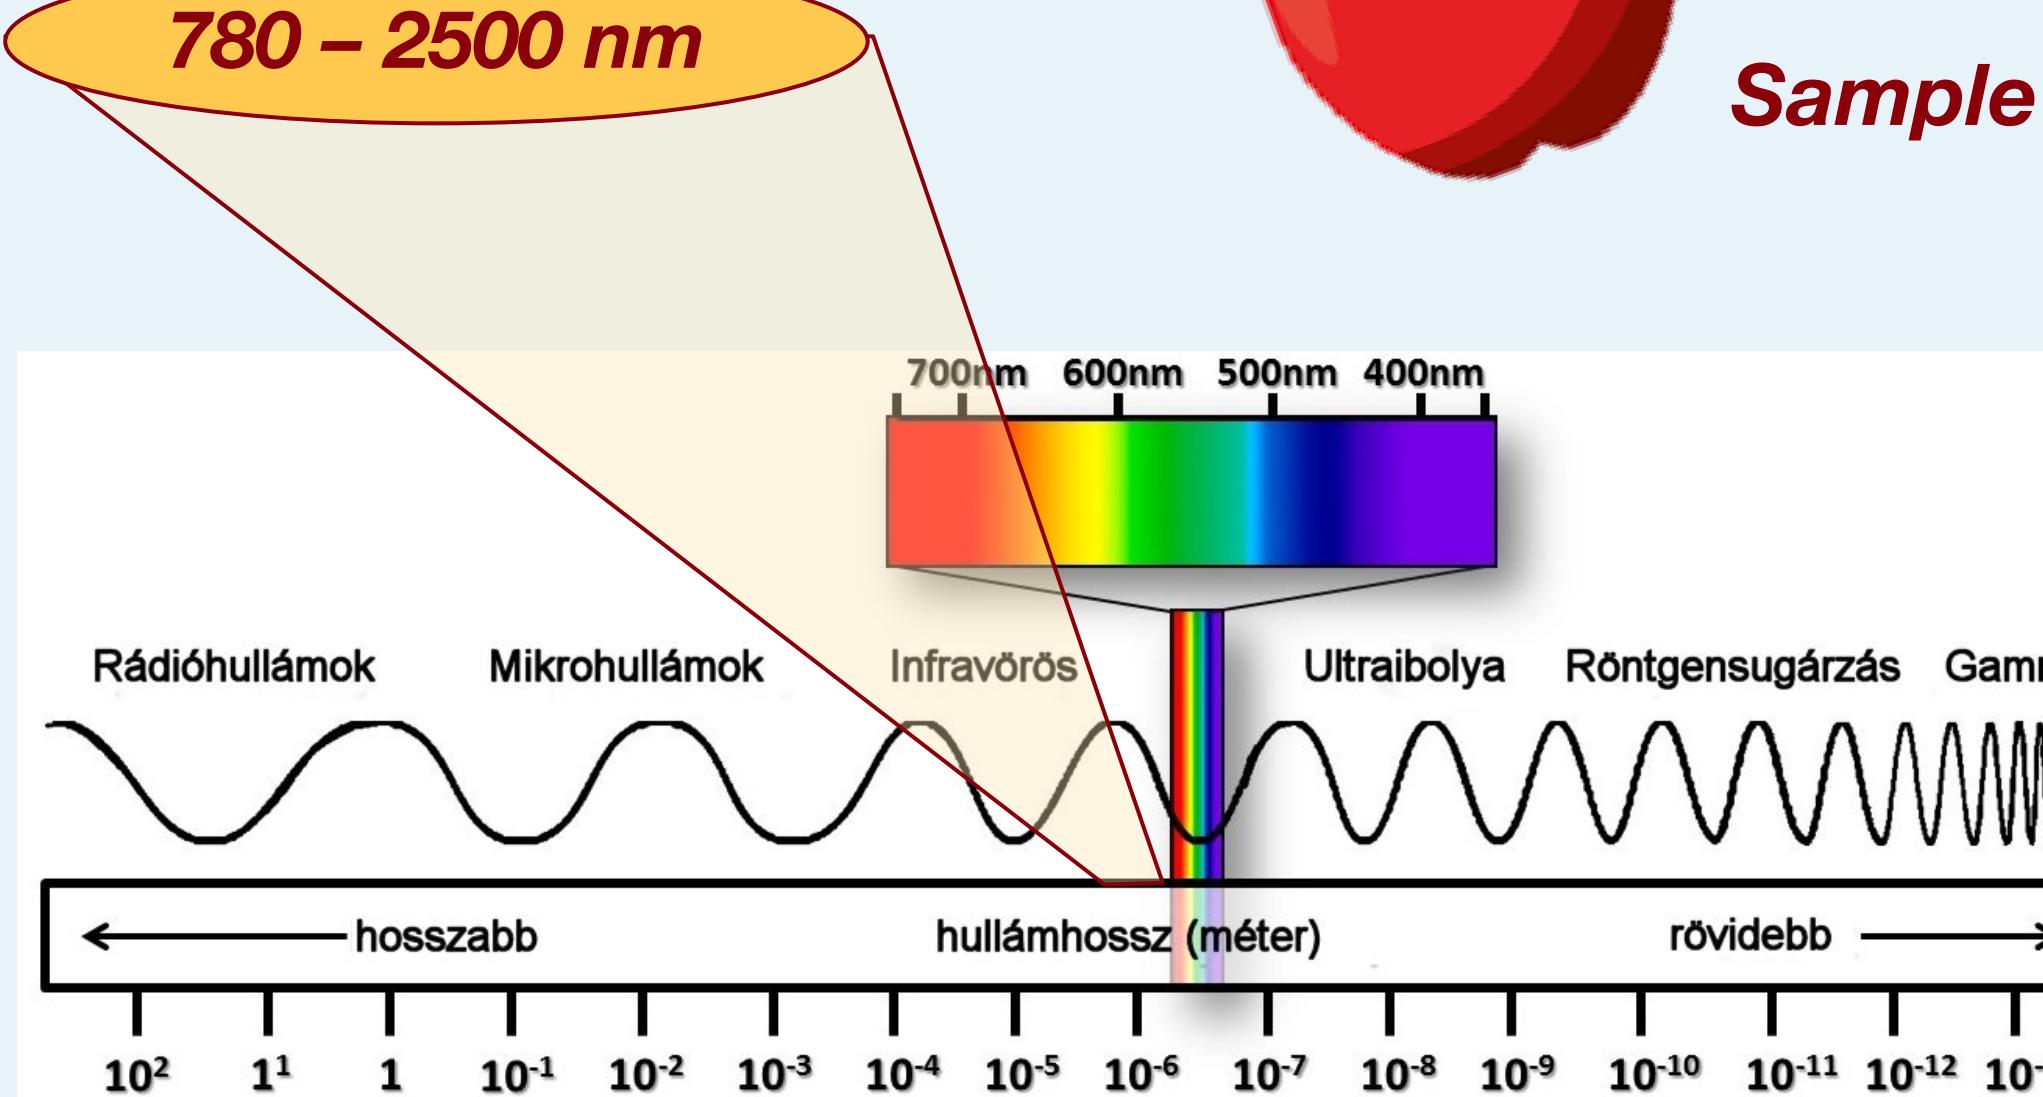

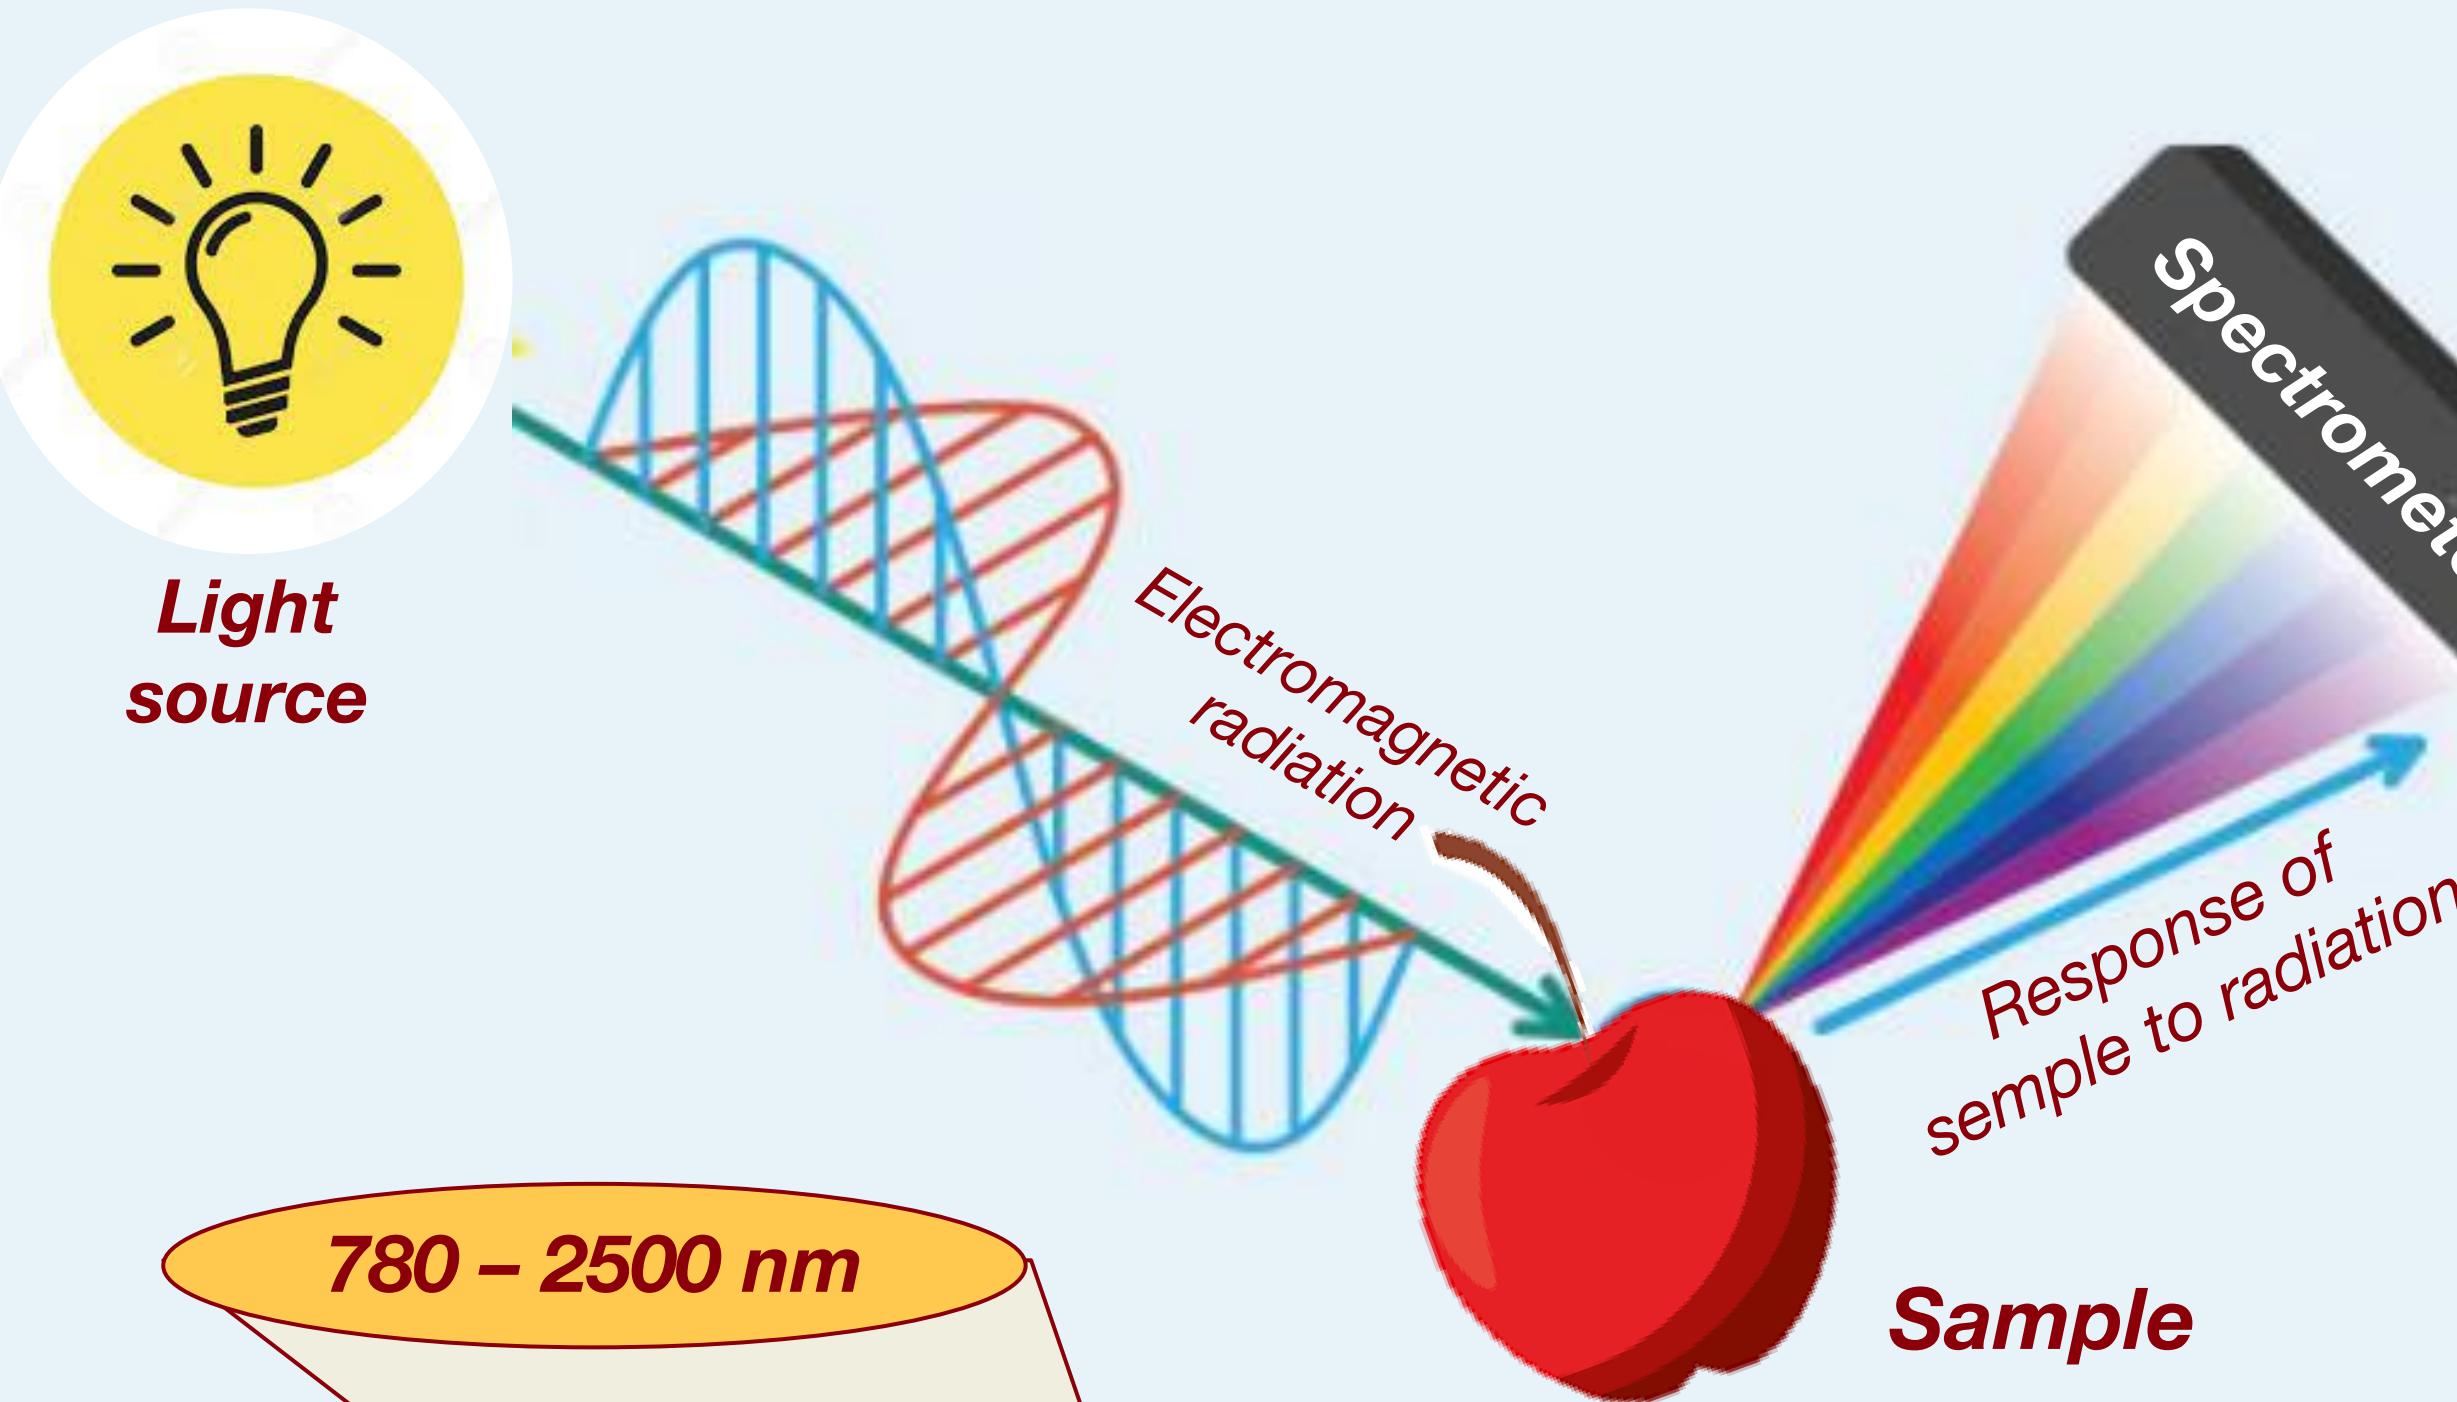

Near infrared spectroscopy

- ✓ 900 – 1700 nm
- ✓ Spectrum recording on the mature and immature sides
- ✓ 3 consecutive scanning

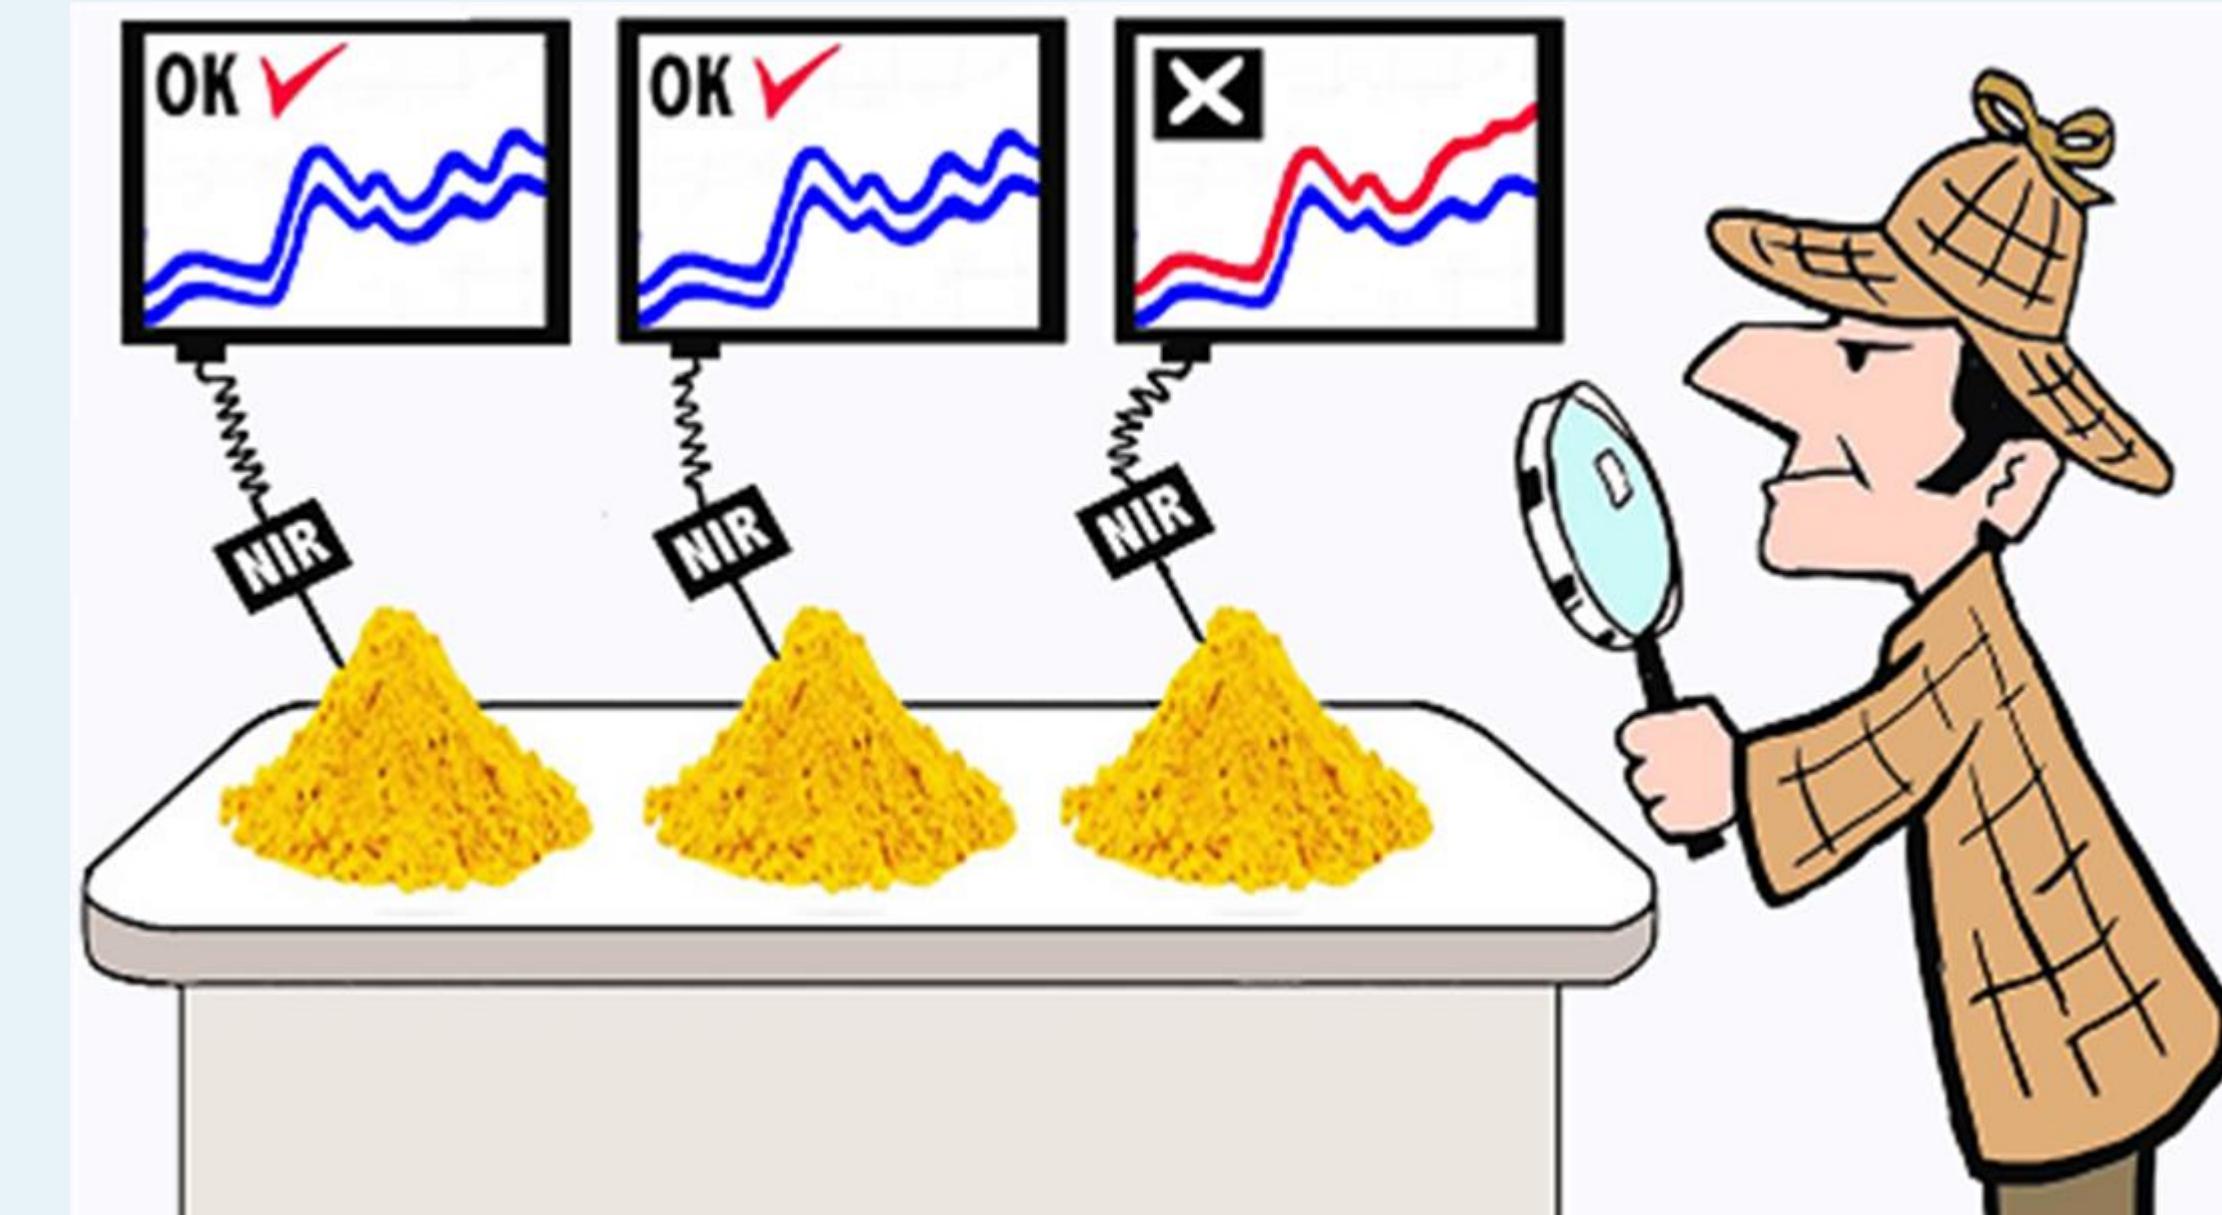

Fingerprint methods I. Near infrared spectroscopy

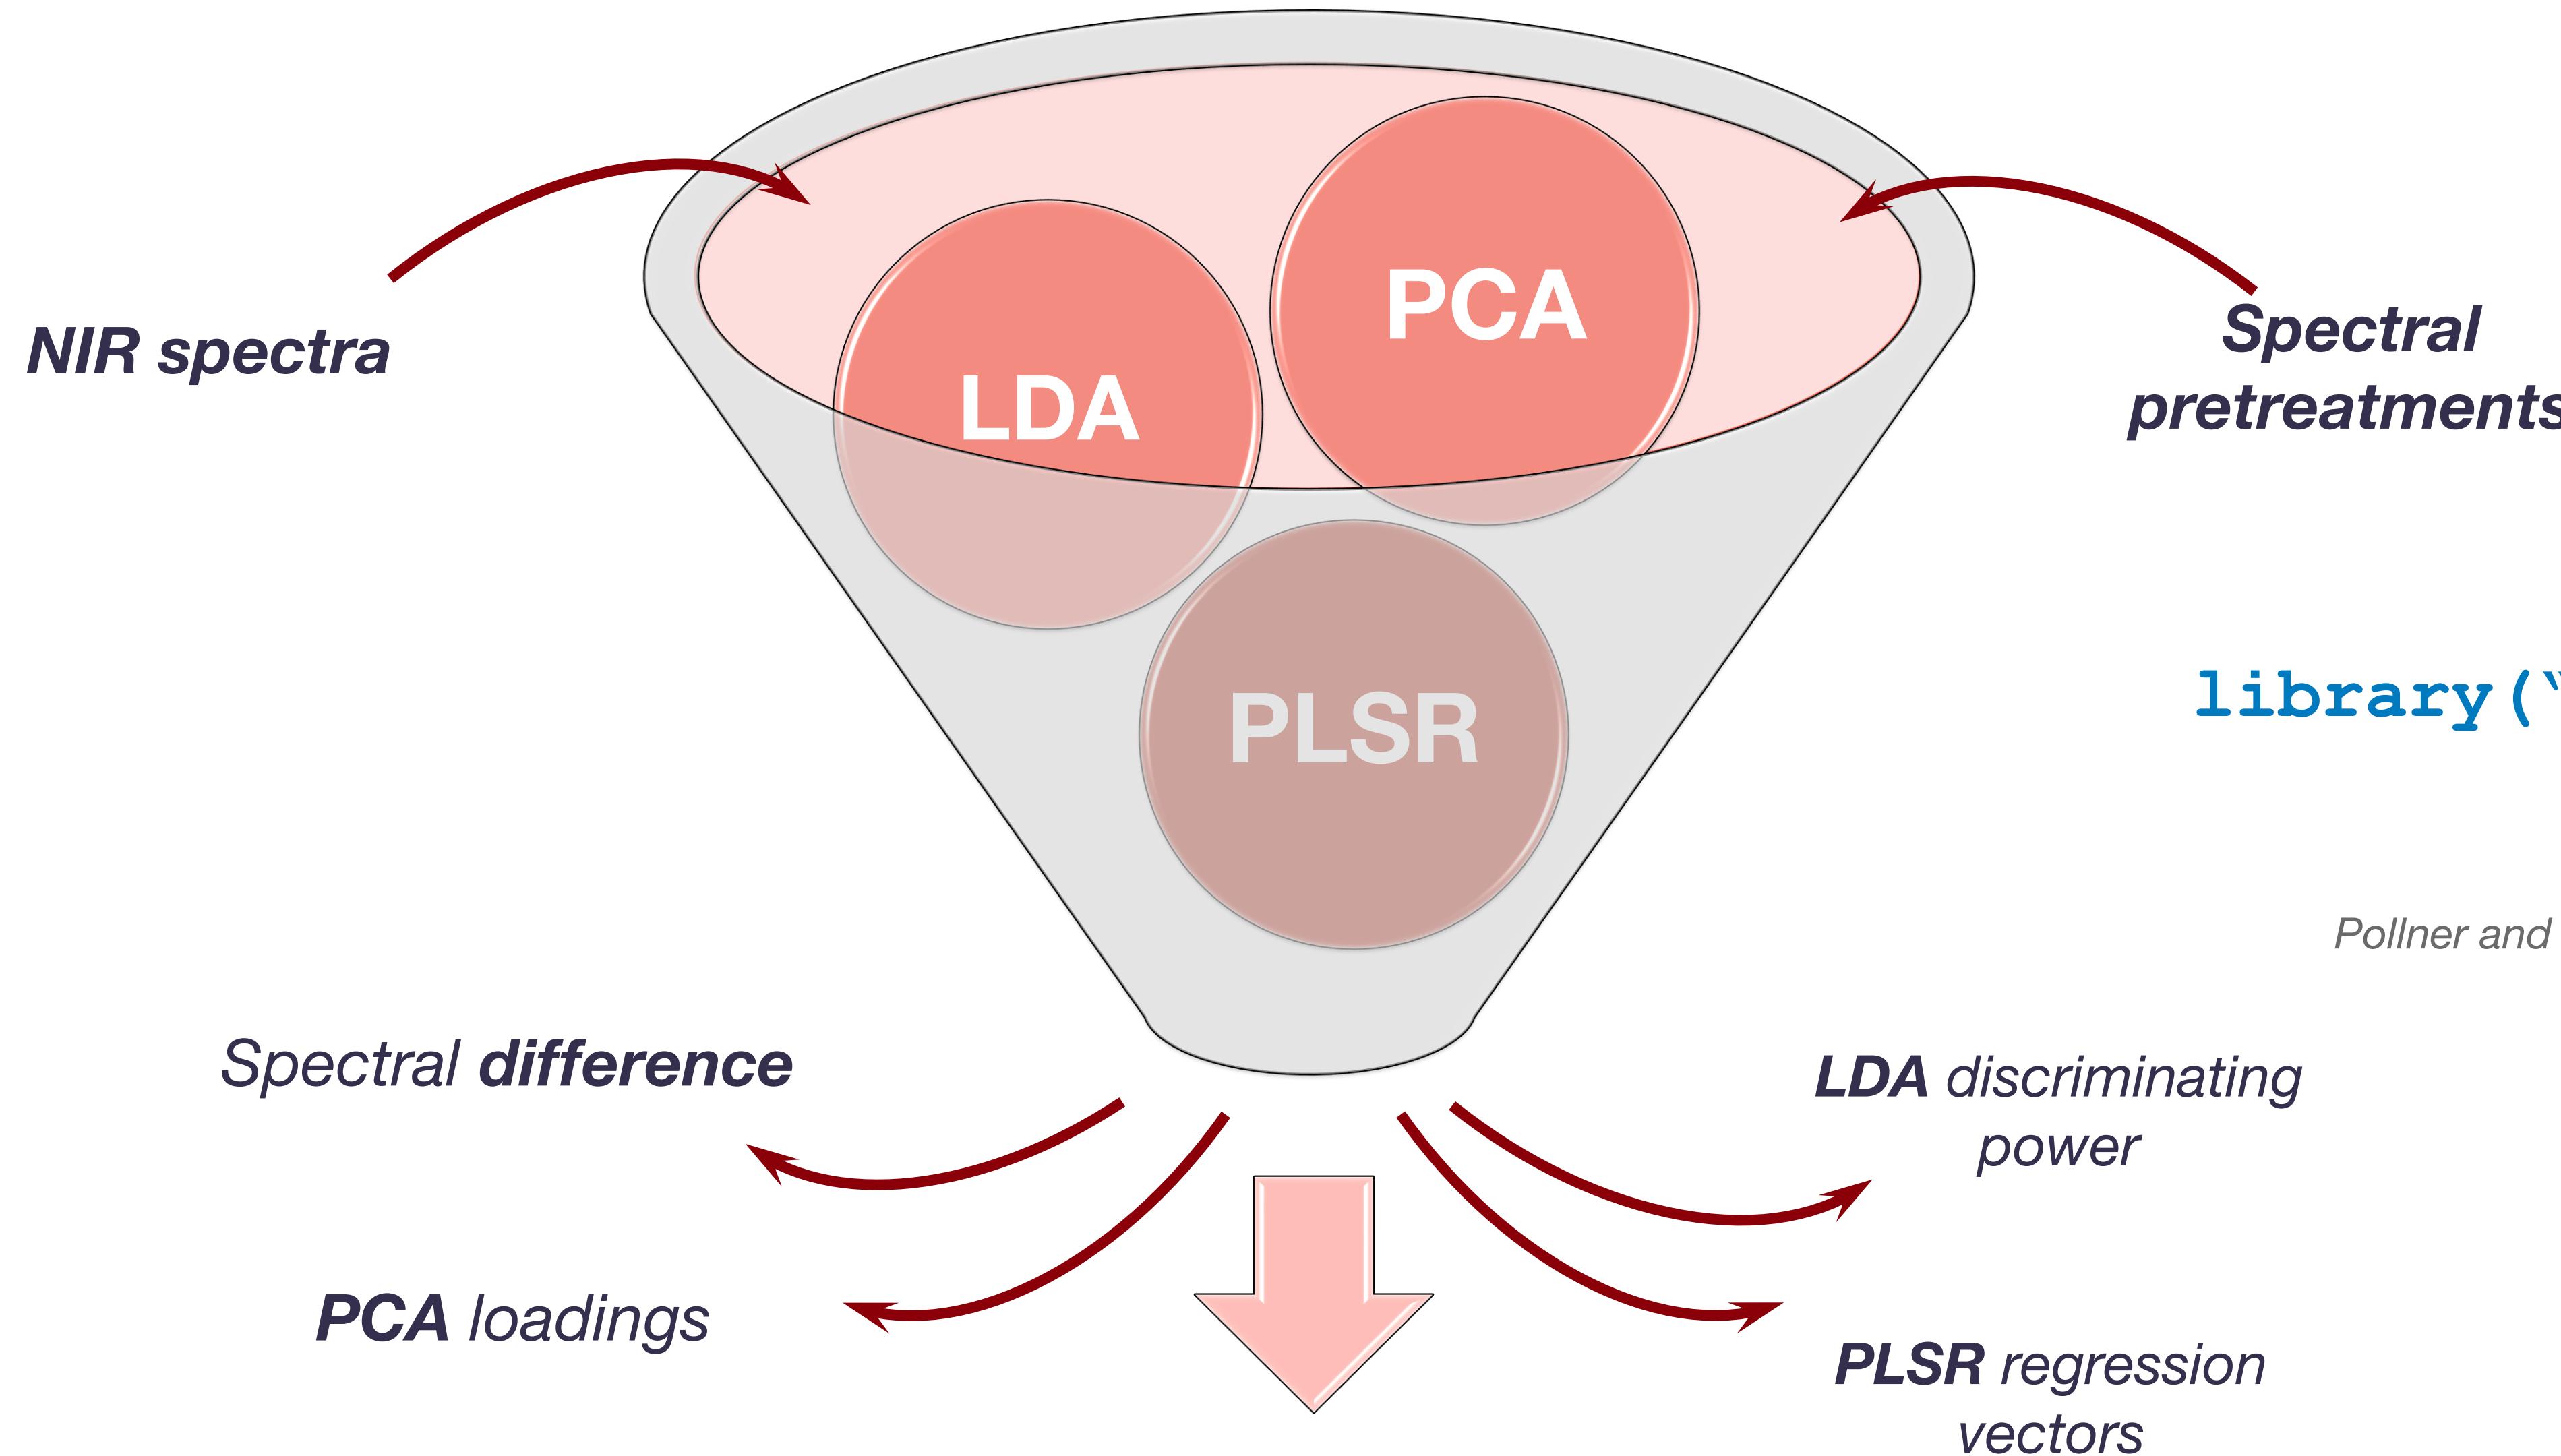

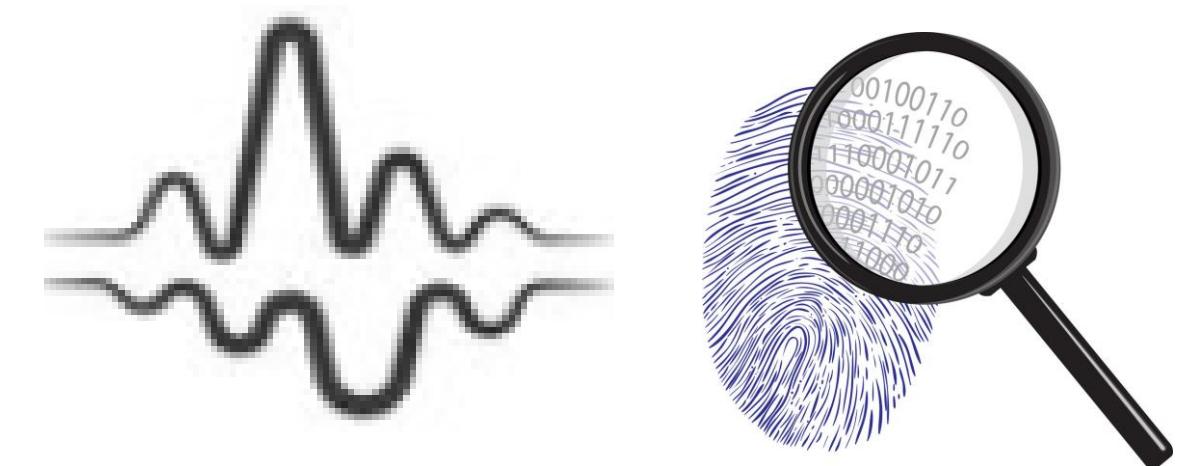

Spectral data

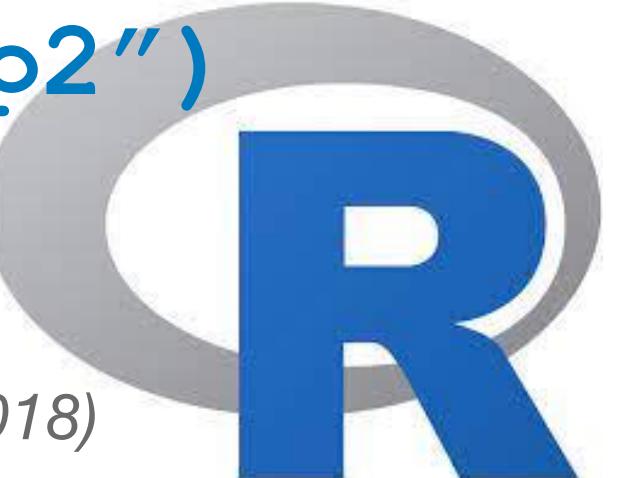

Data analysis

Chemometric analyses

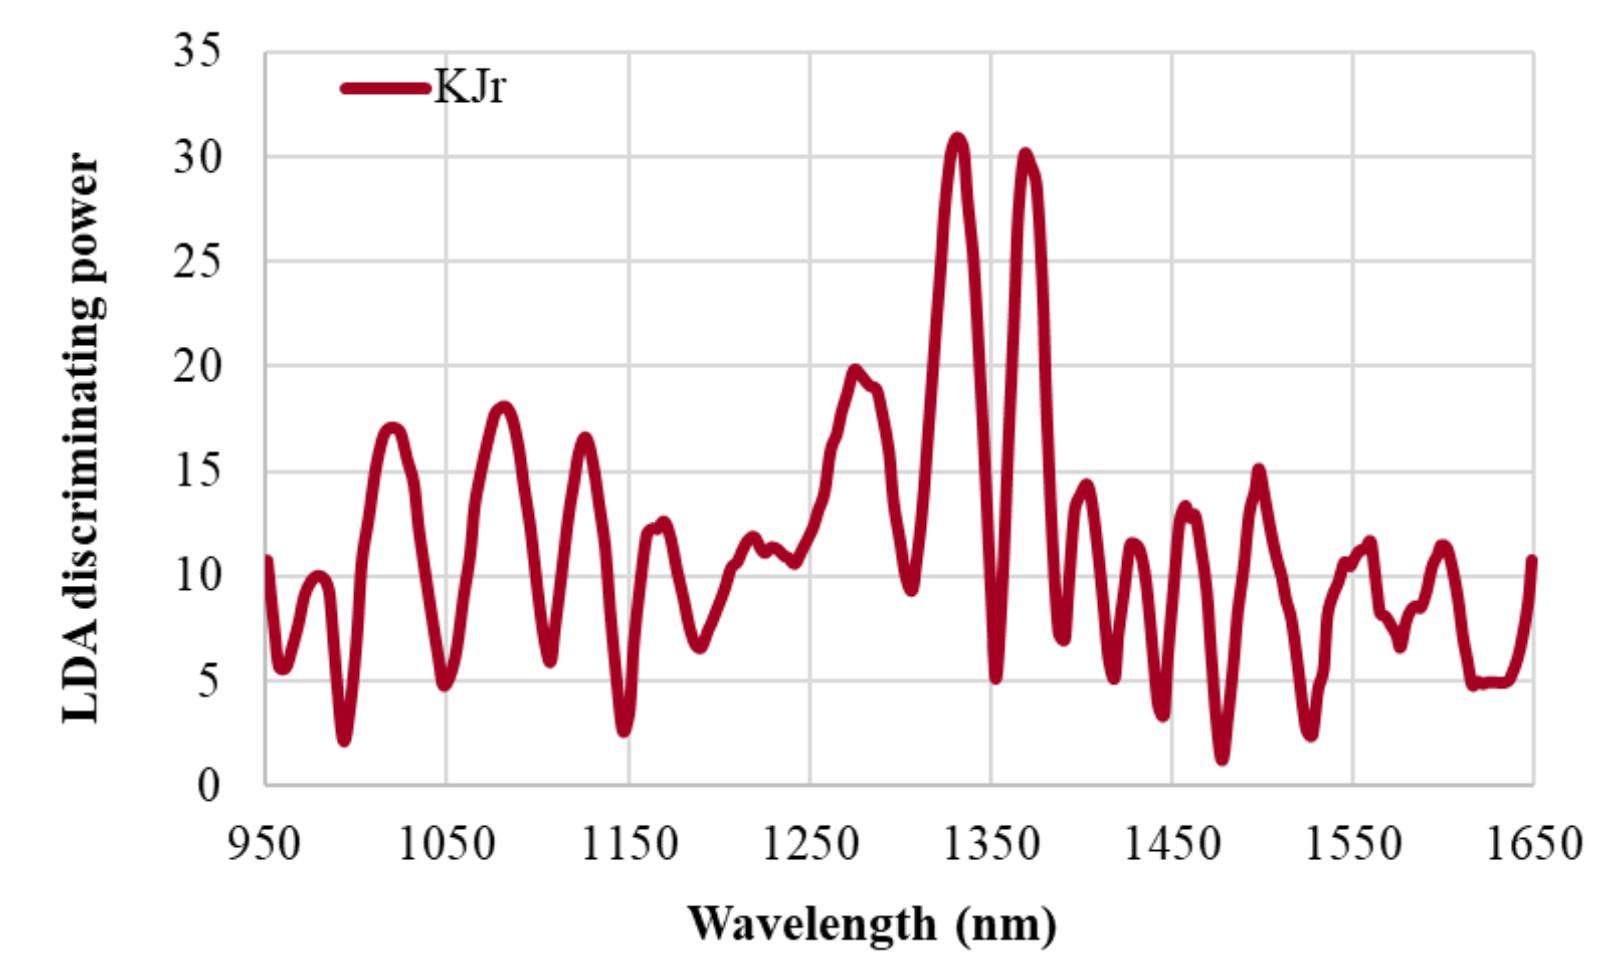

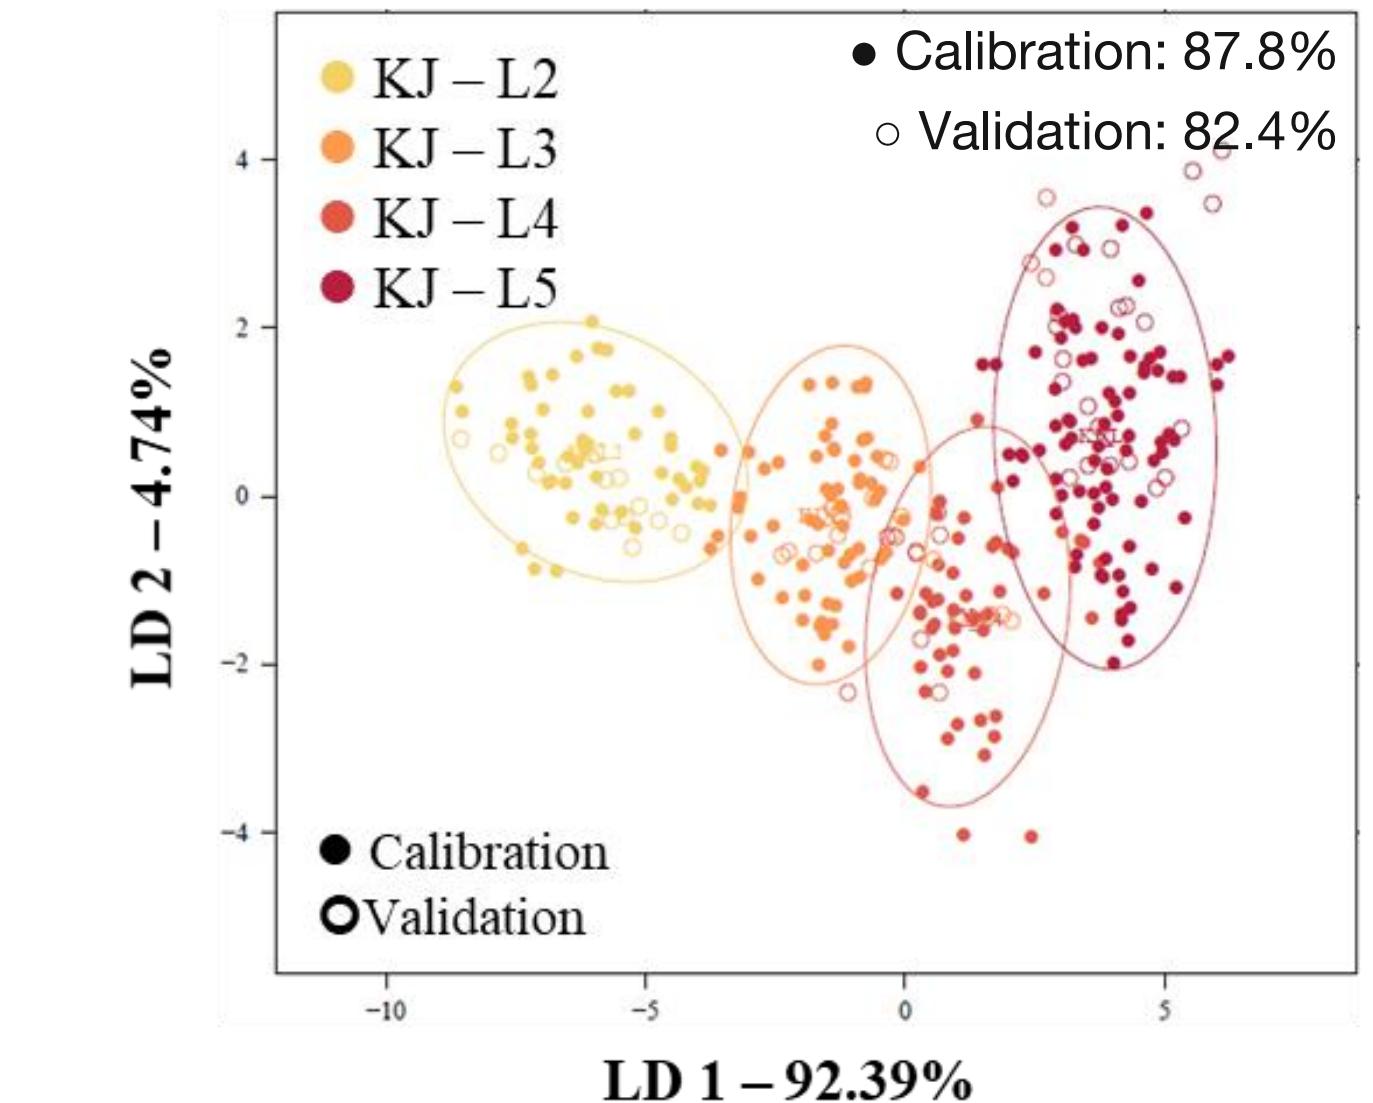

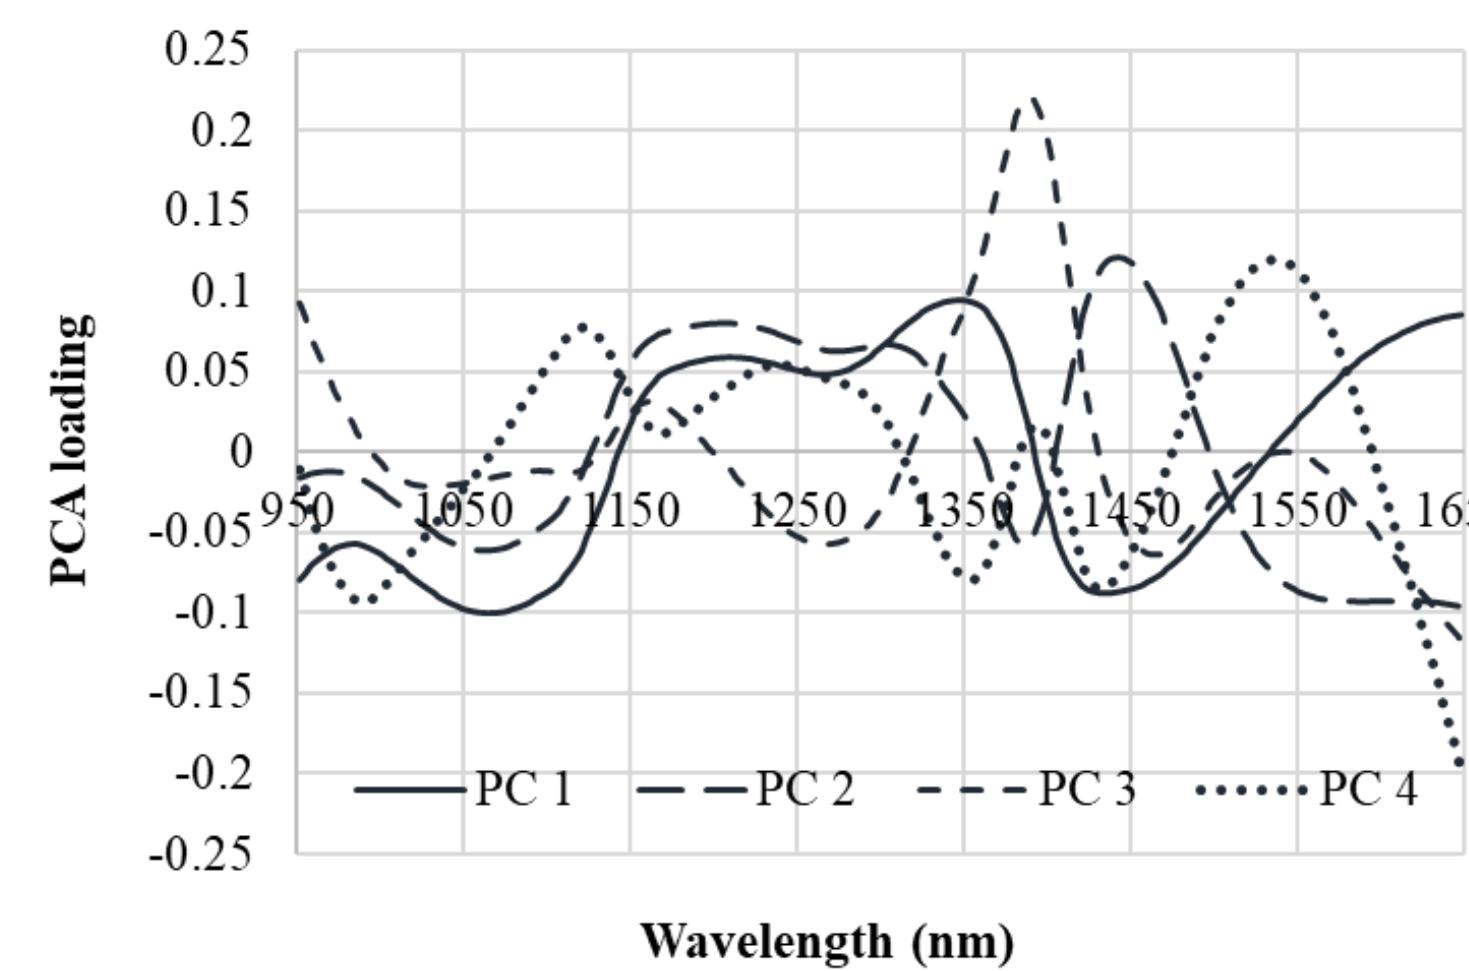

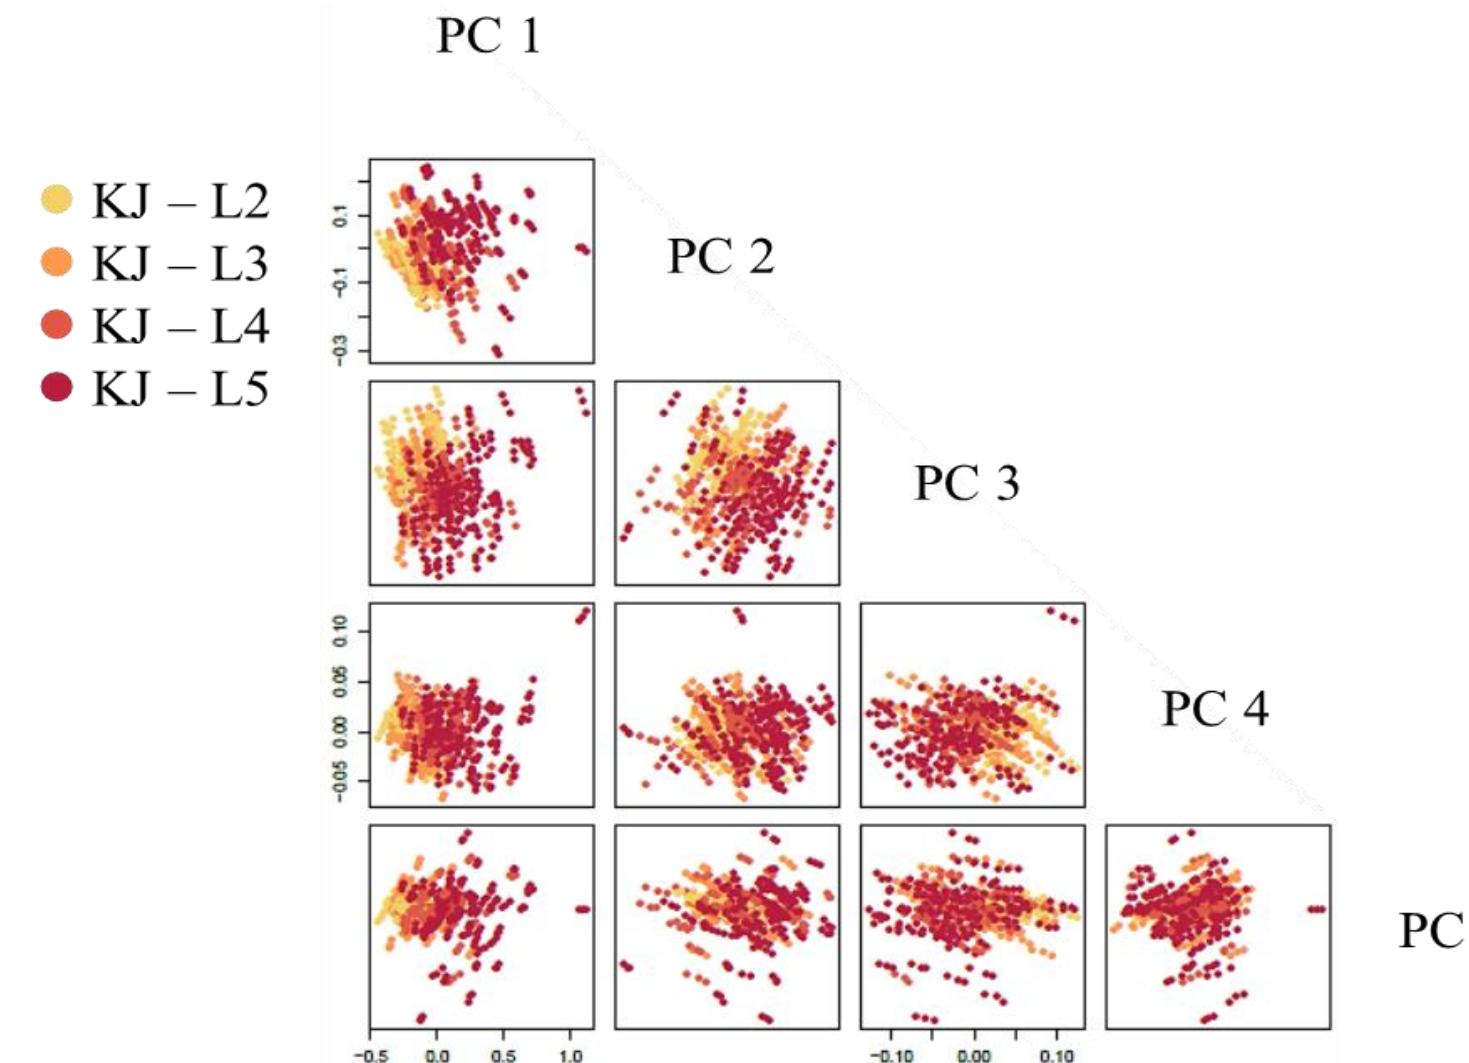

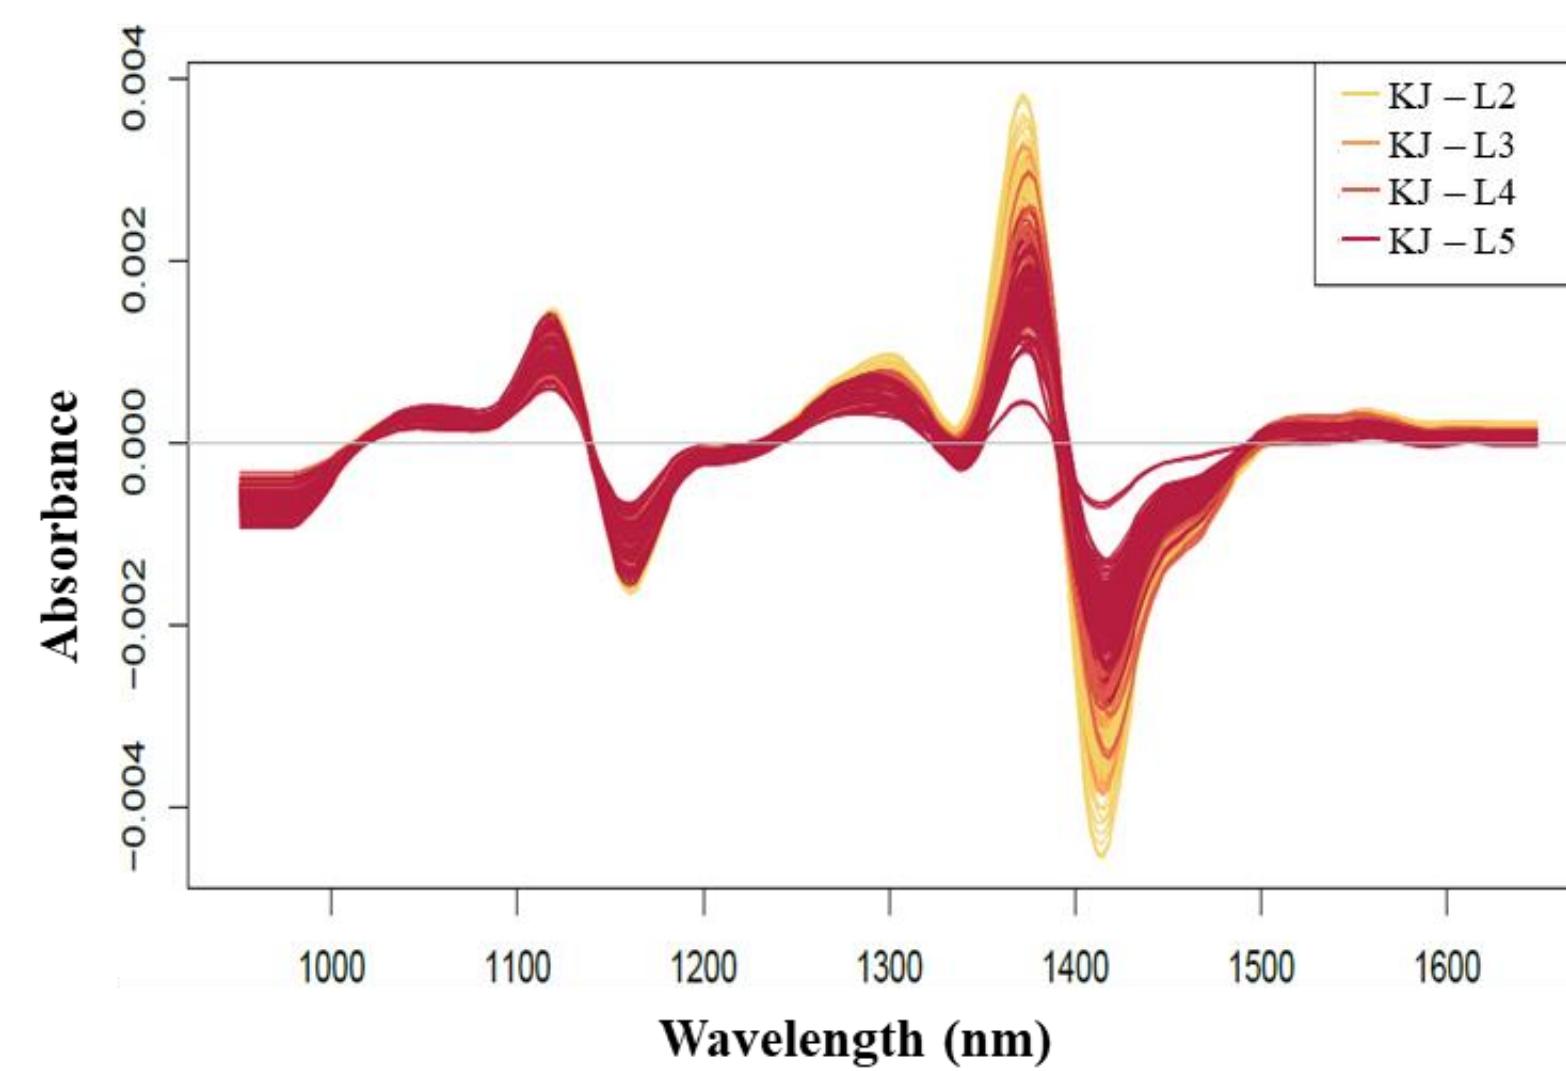

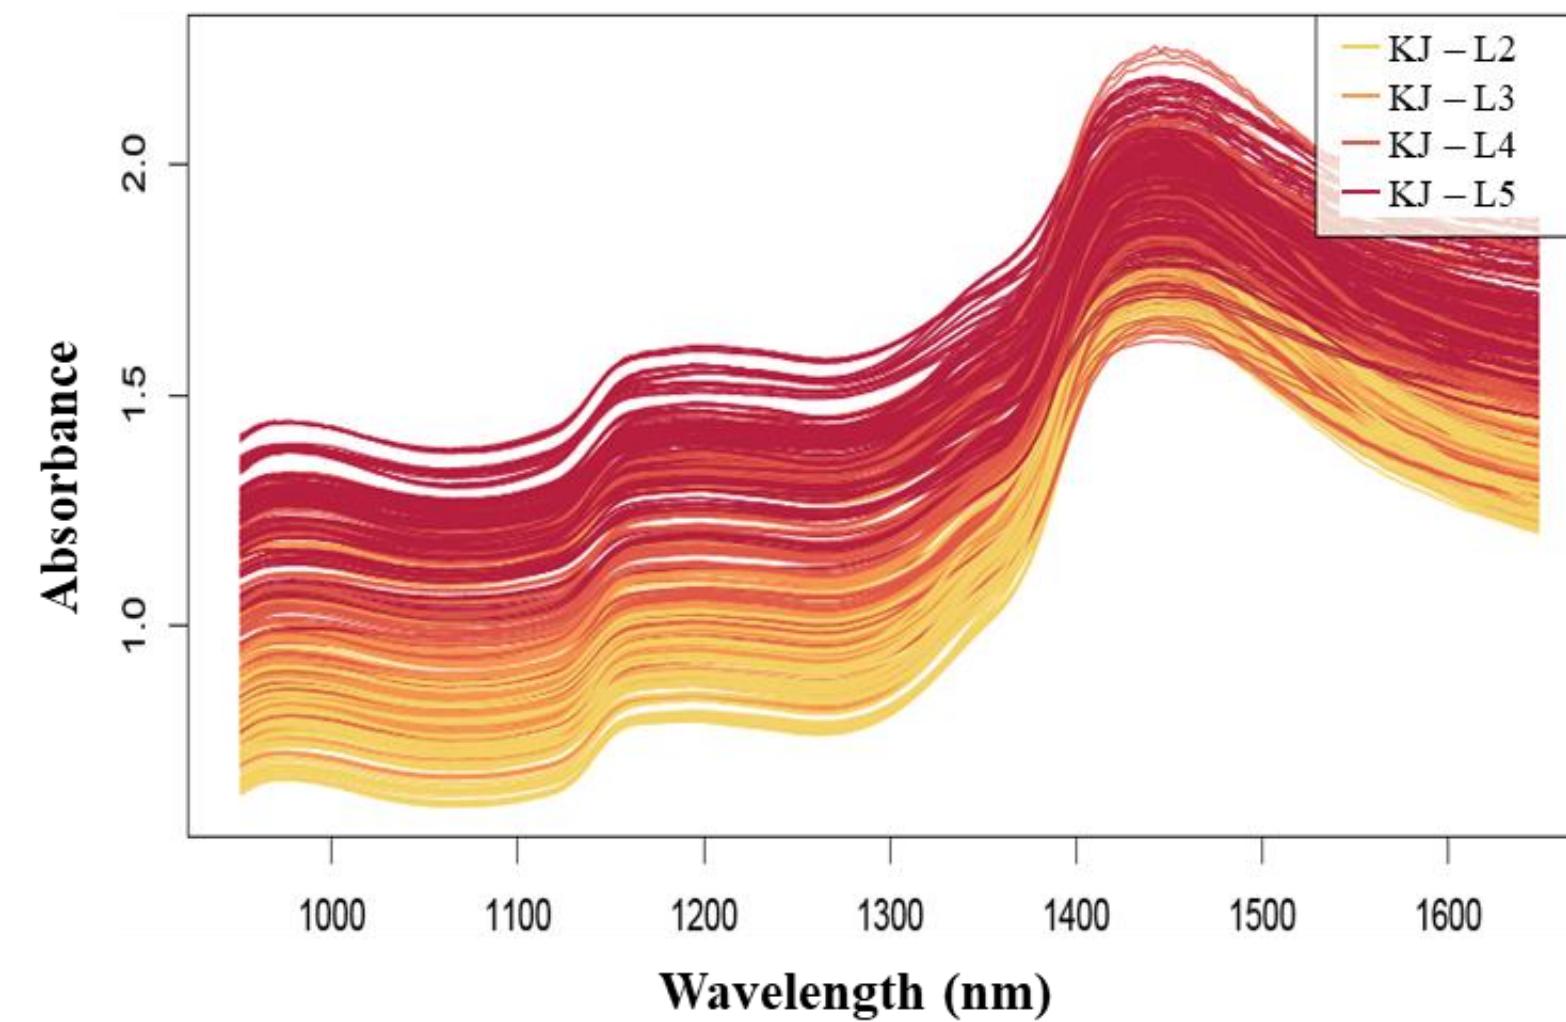

- Savitzky-Golay smoothing
- Scatter correction,
- Detrending,
- 1st derivatives
- 2nd derivatives

library ("aquap2")

Pollner and Kovacs (2018)

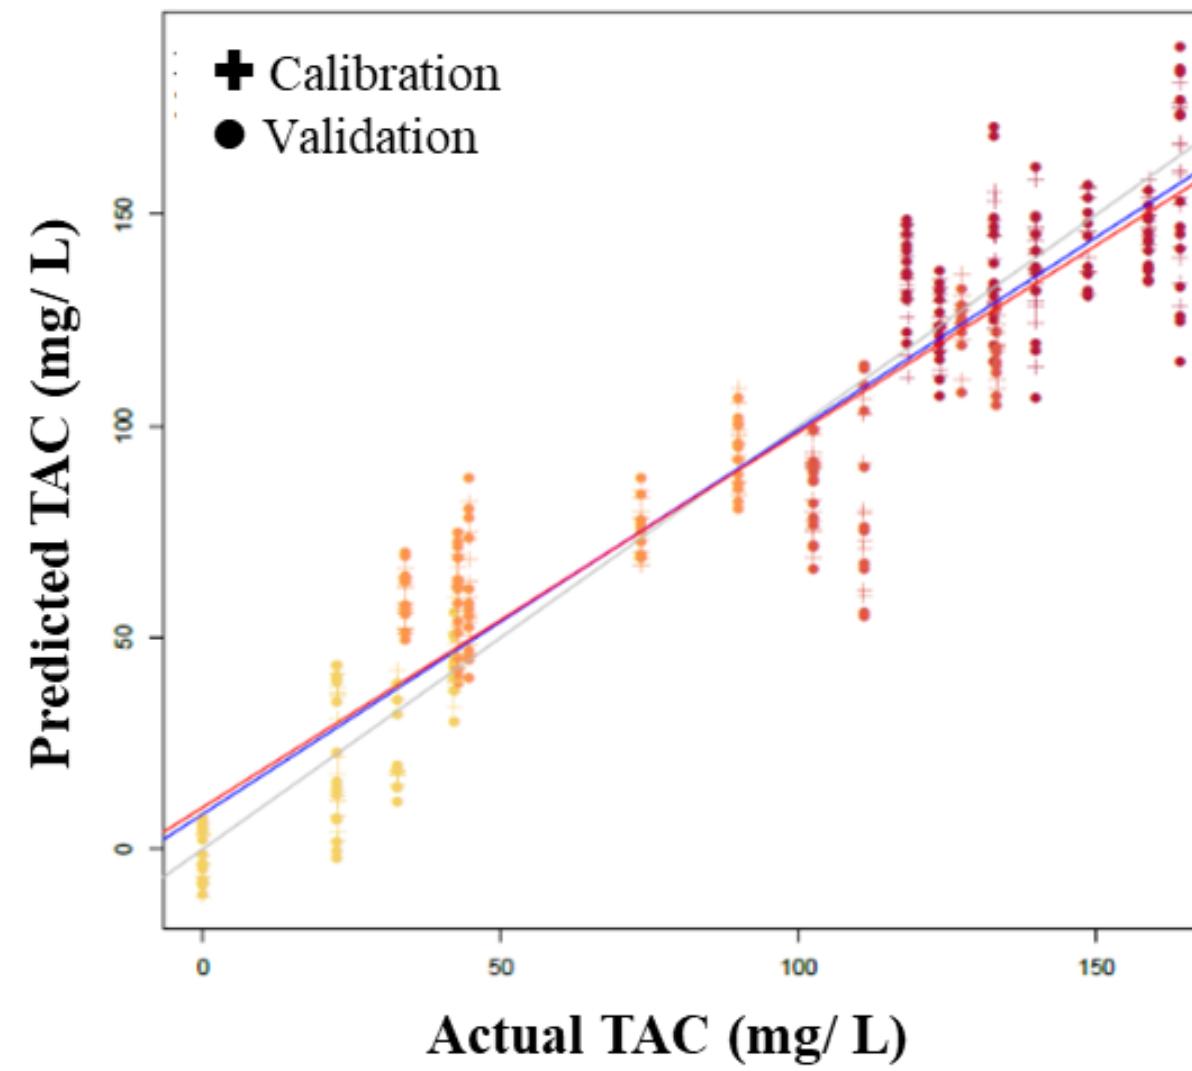

Fingerprint methods I. Near infrared spectroscopy

PCA, PCA-LDA

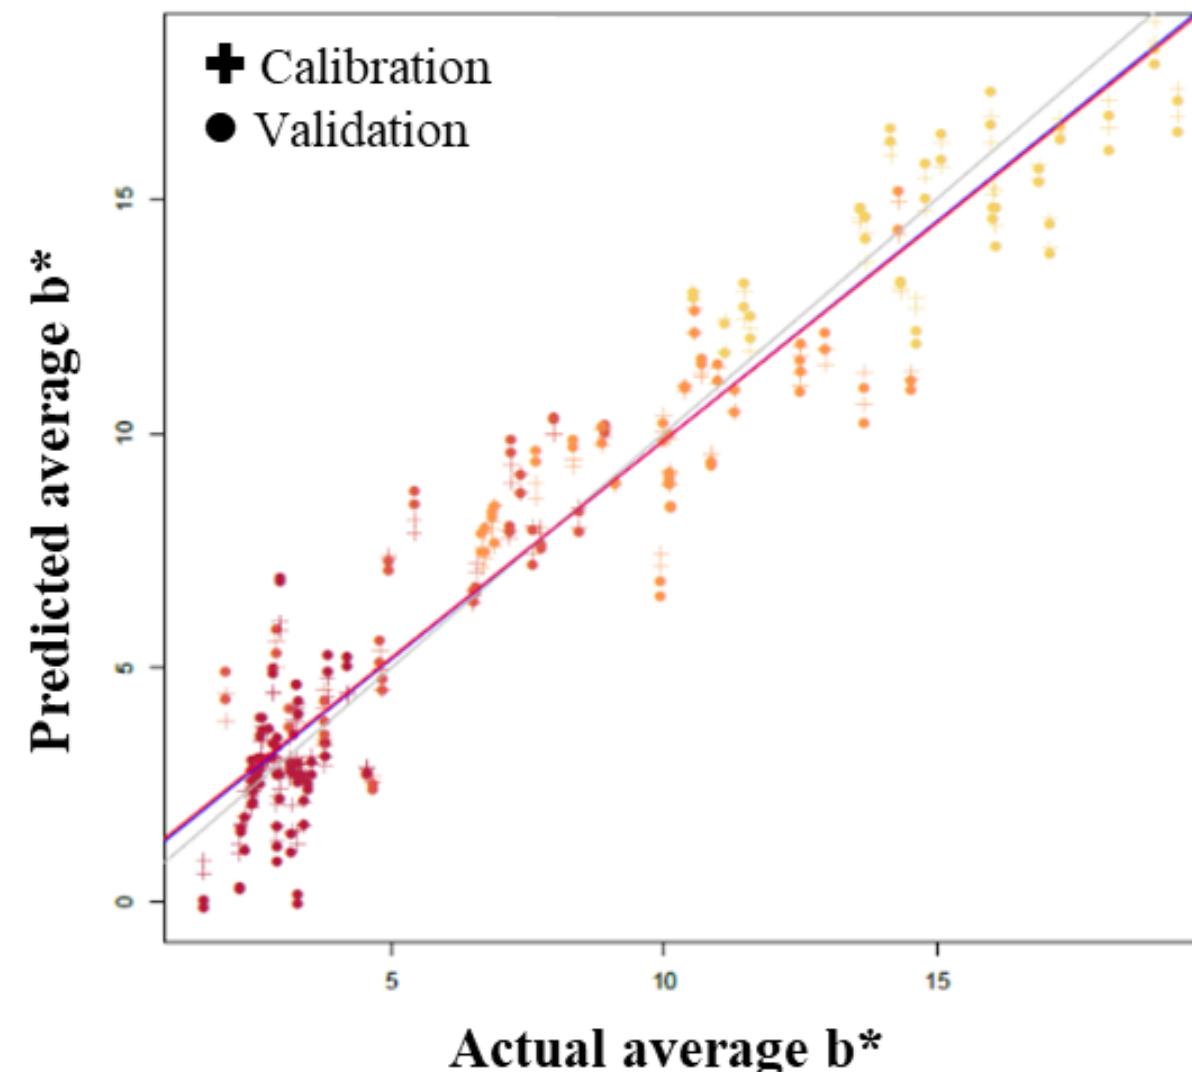

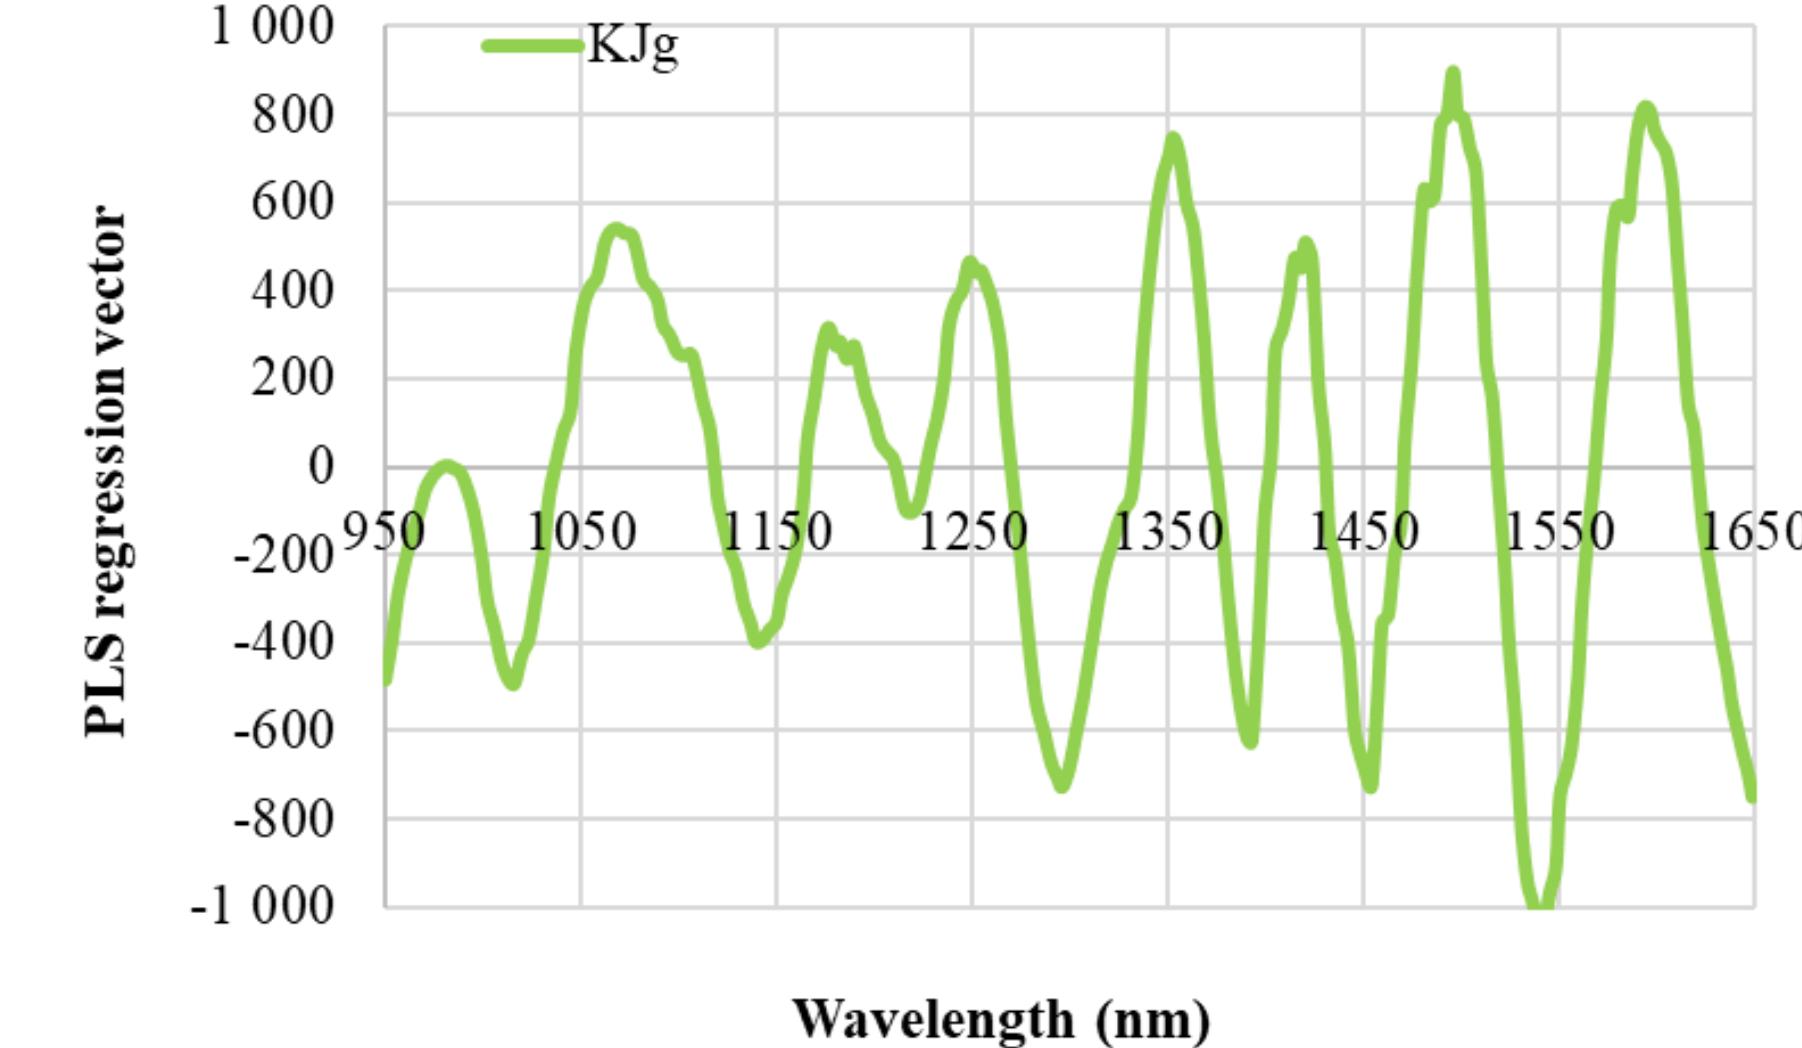

Fingerprint methods I. Near infrared spectroscopy

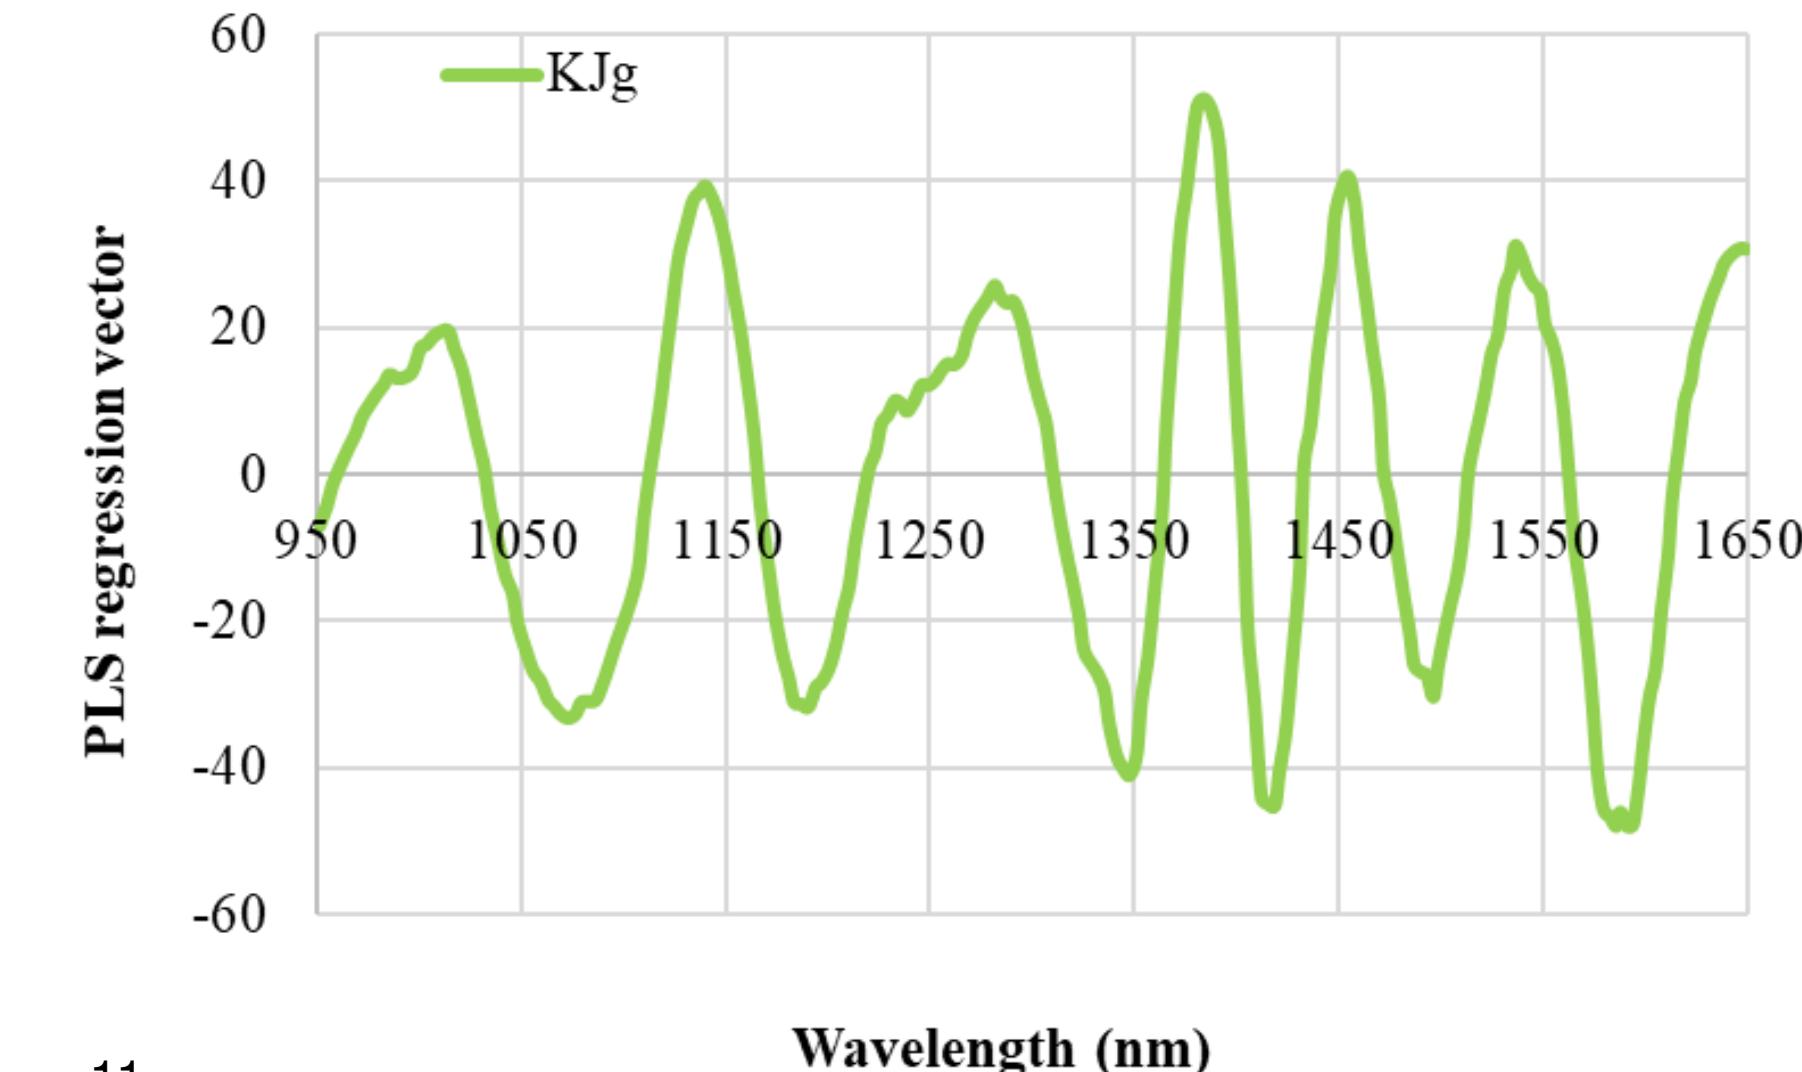

PLSR

NrLV = 14
 $R^2_c = 0.91$
 $RMSE_c = 15.14 \text{ mg/L}$
 $R^2_{cv} = 0.87$
 $RMSE_{cv} = 18.03 \text{ mg/L}$

NrLV = 12
 $R^2_c = 0.93$
 $RMSE_c = 1.26$
 $R^2_{cv} = 0.91$
 $RMSE_{cv} = 1.51$

The process of brown rotting

Pomme and stone fruit cultivation and production are under threat.

Enter fruit through damage or by secreting cell wall-degrading enzymes

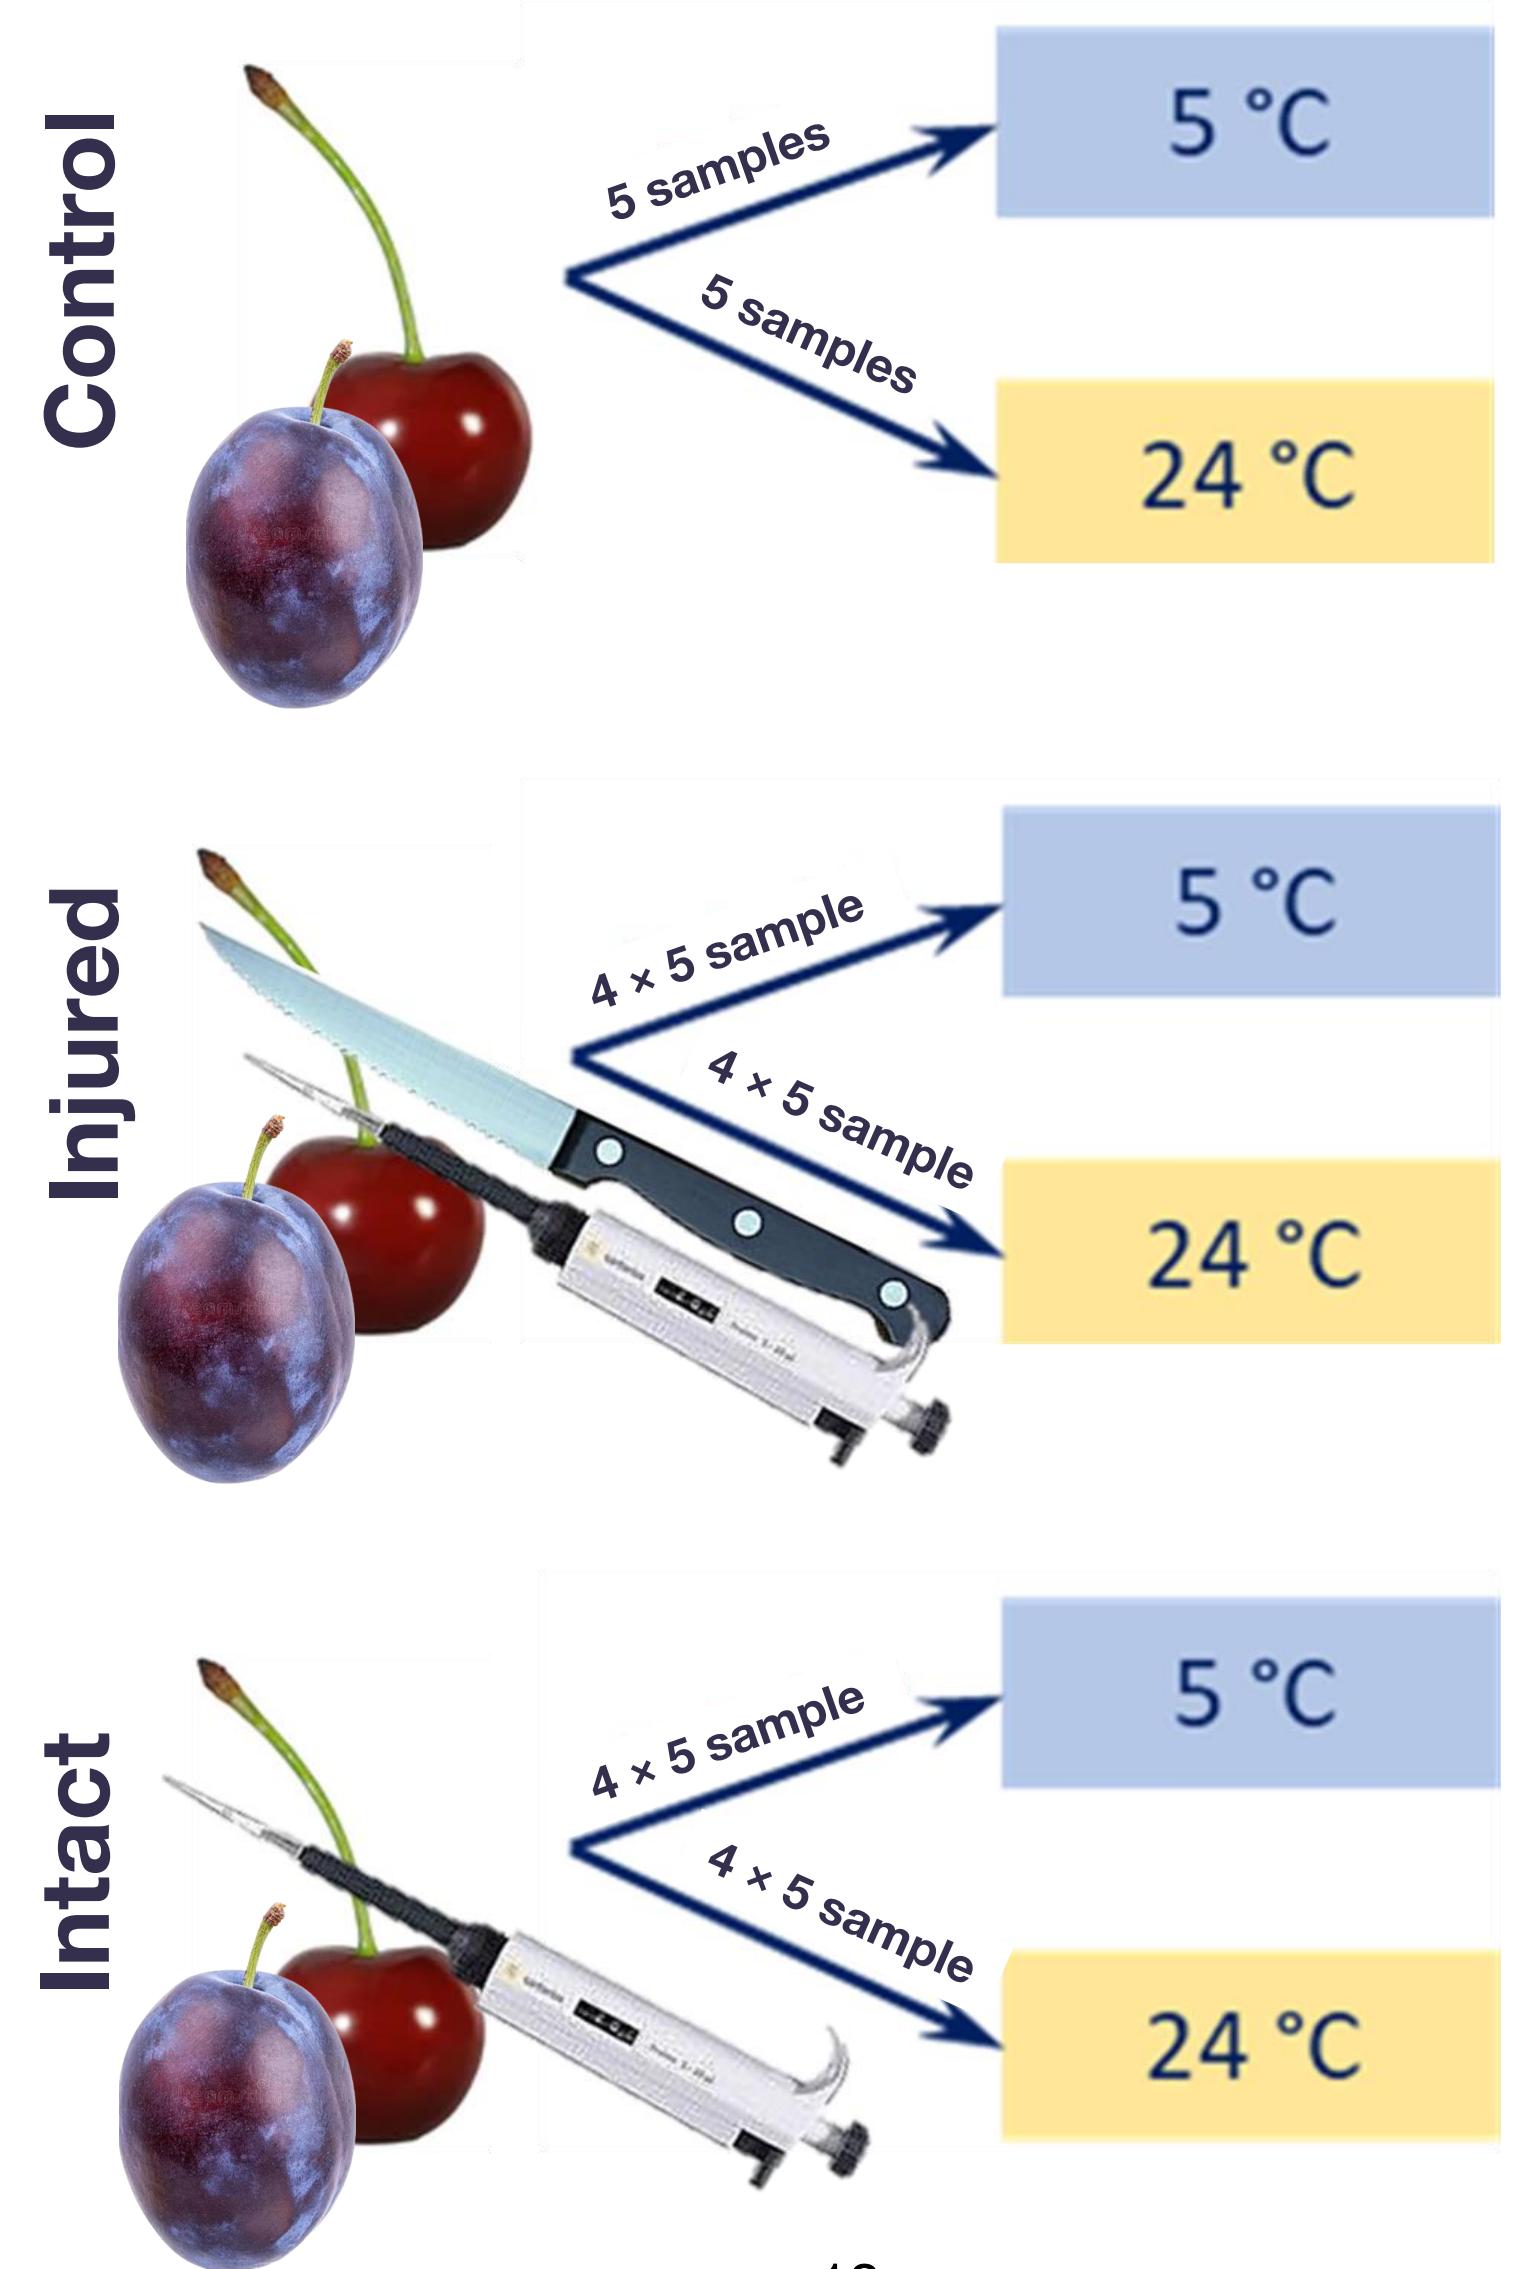

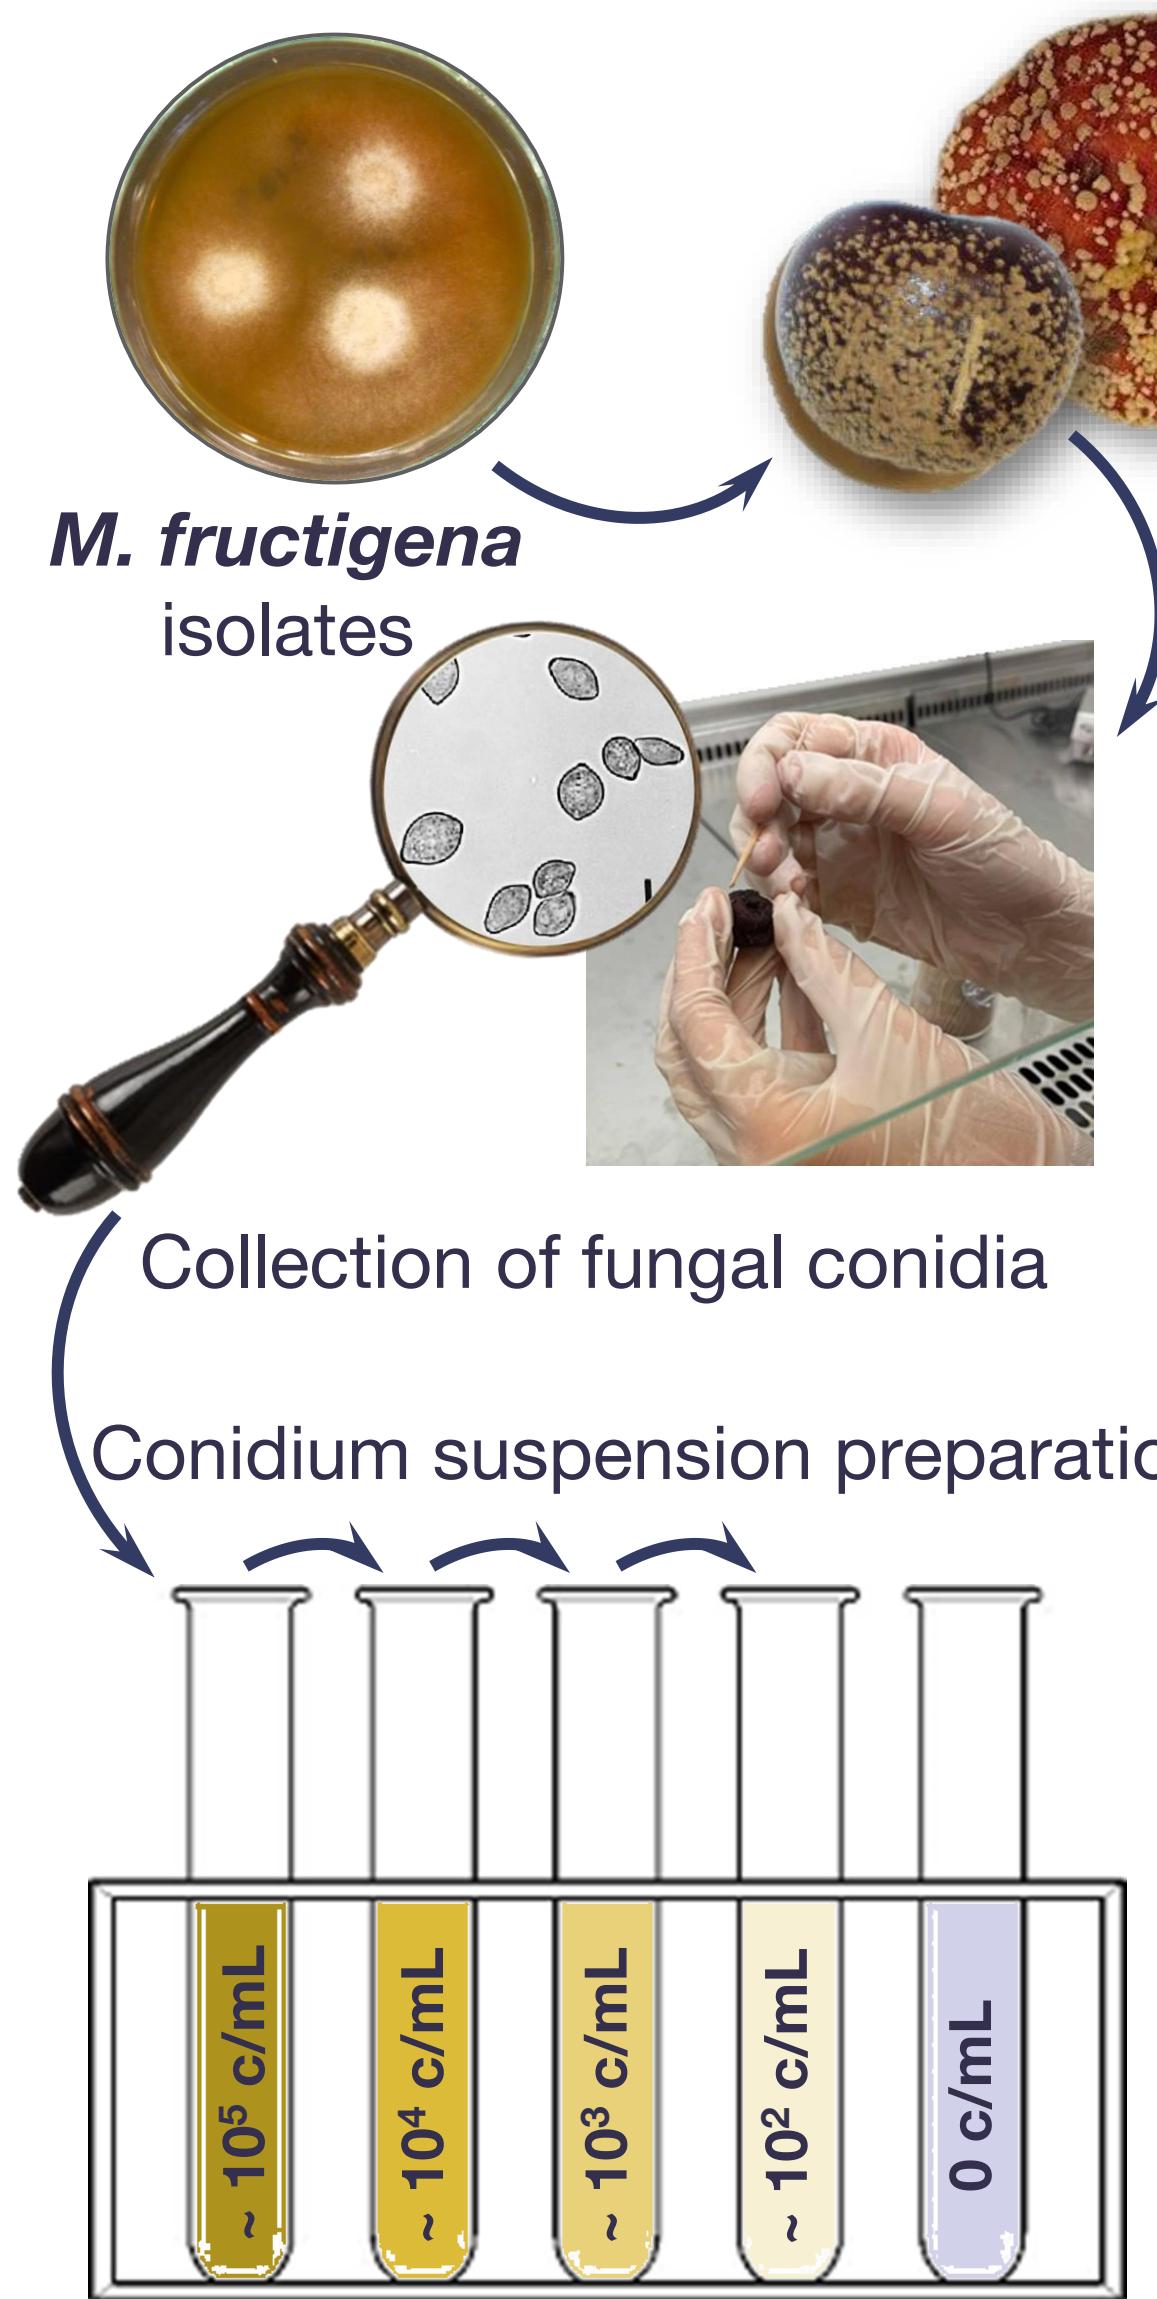

Monilinia fructicola

Monilinia laxa

Monilinia fructigena

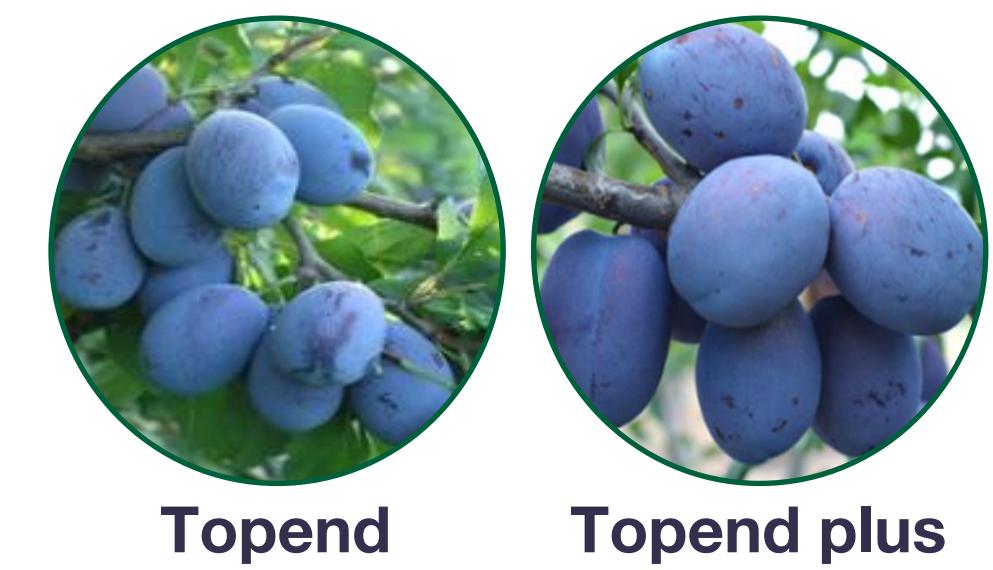

...

Preparation of brown rot detection studies

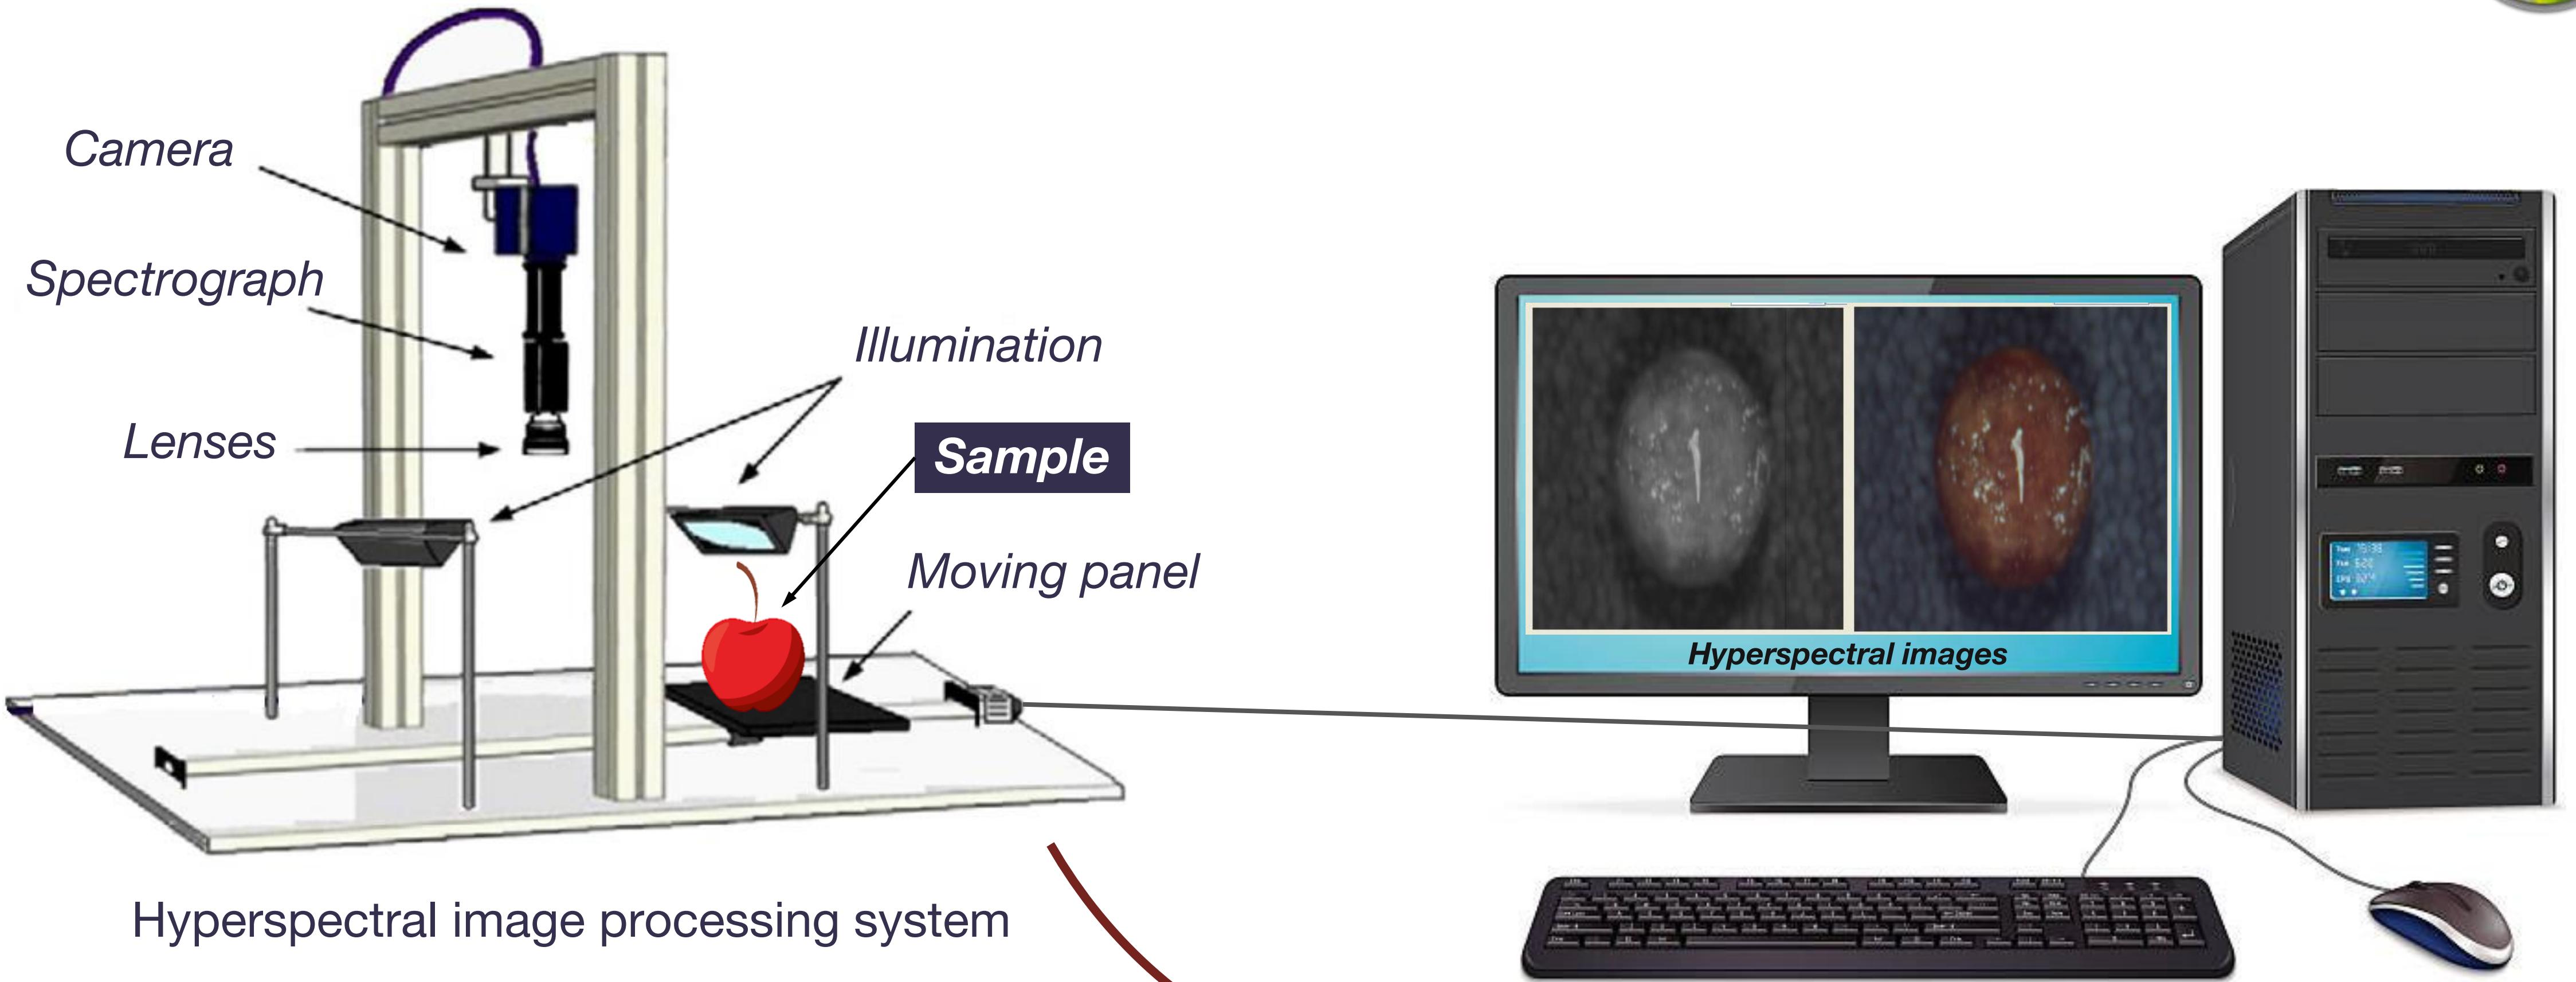

Fruit samples

- Pre-selection according to size and soundness
- Surface disinfection with ethanol (70% V/V)
- 7 day long controlled storage

Fingerprint methods II. Hyperspectral imaging

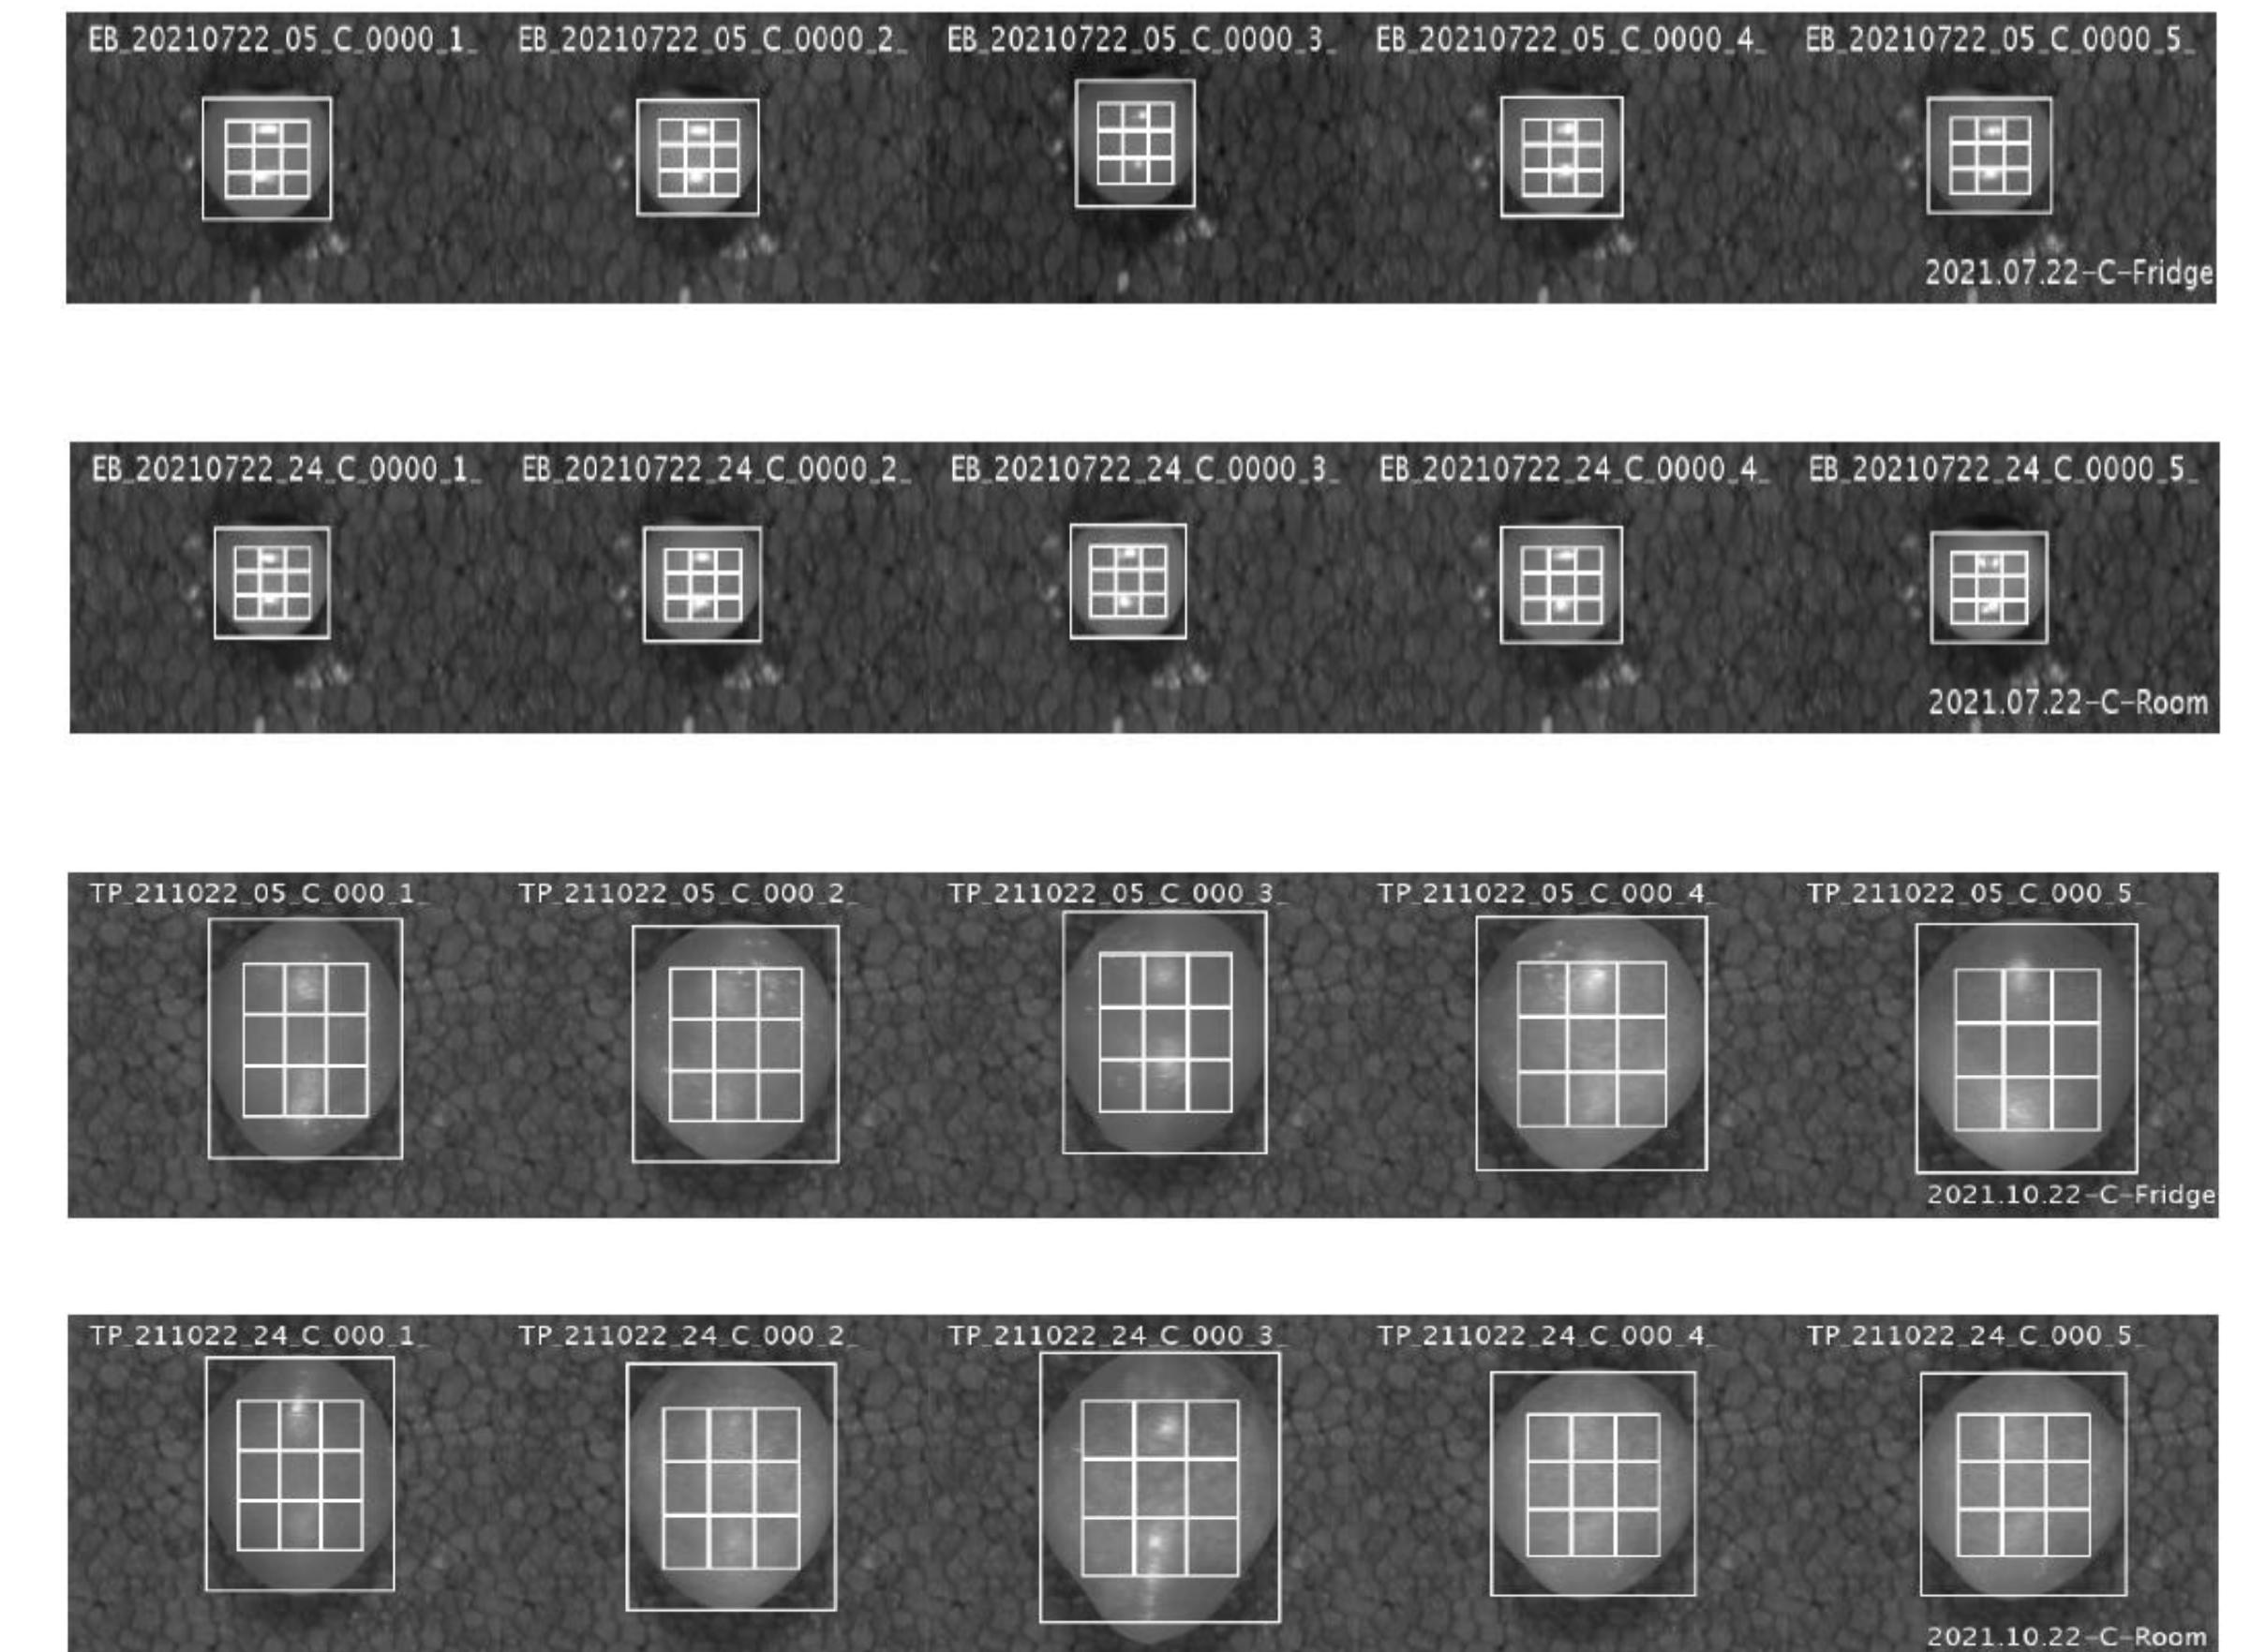

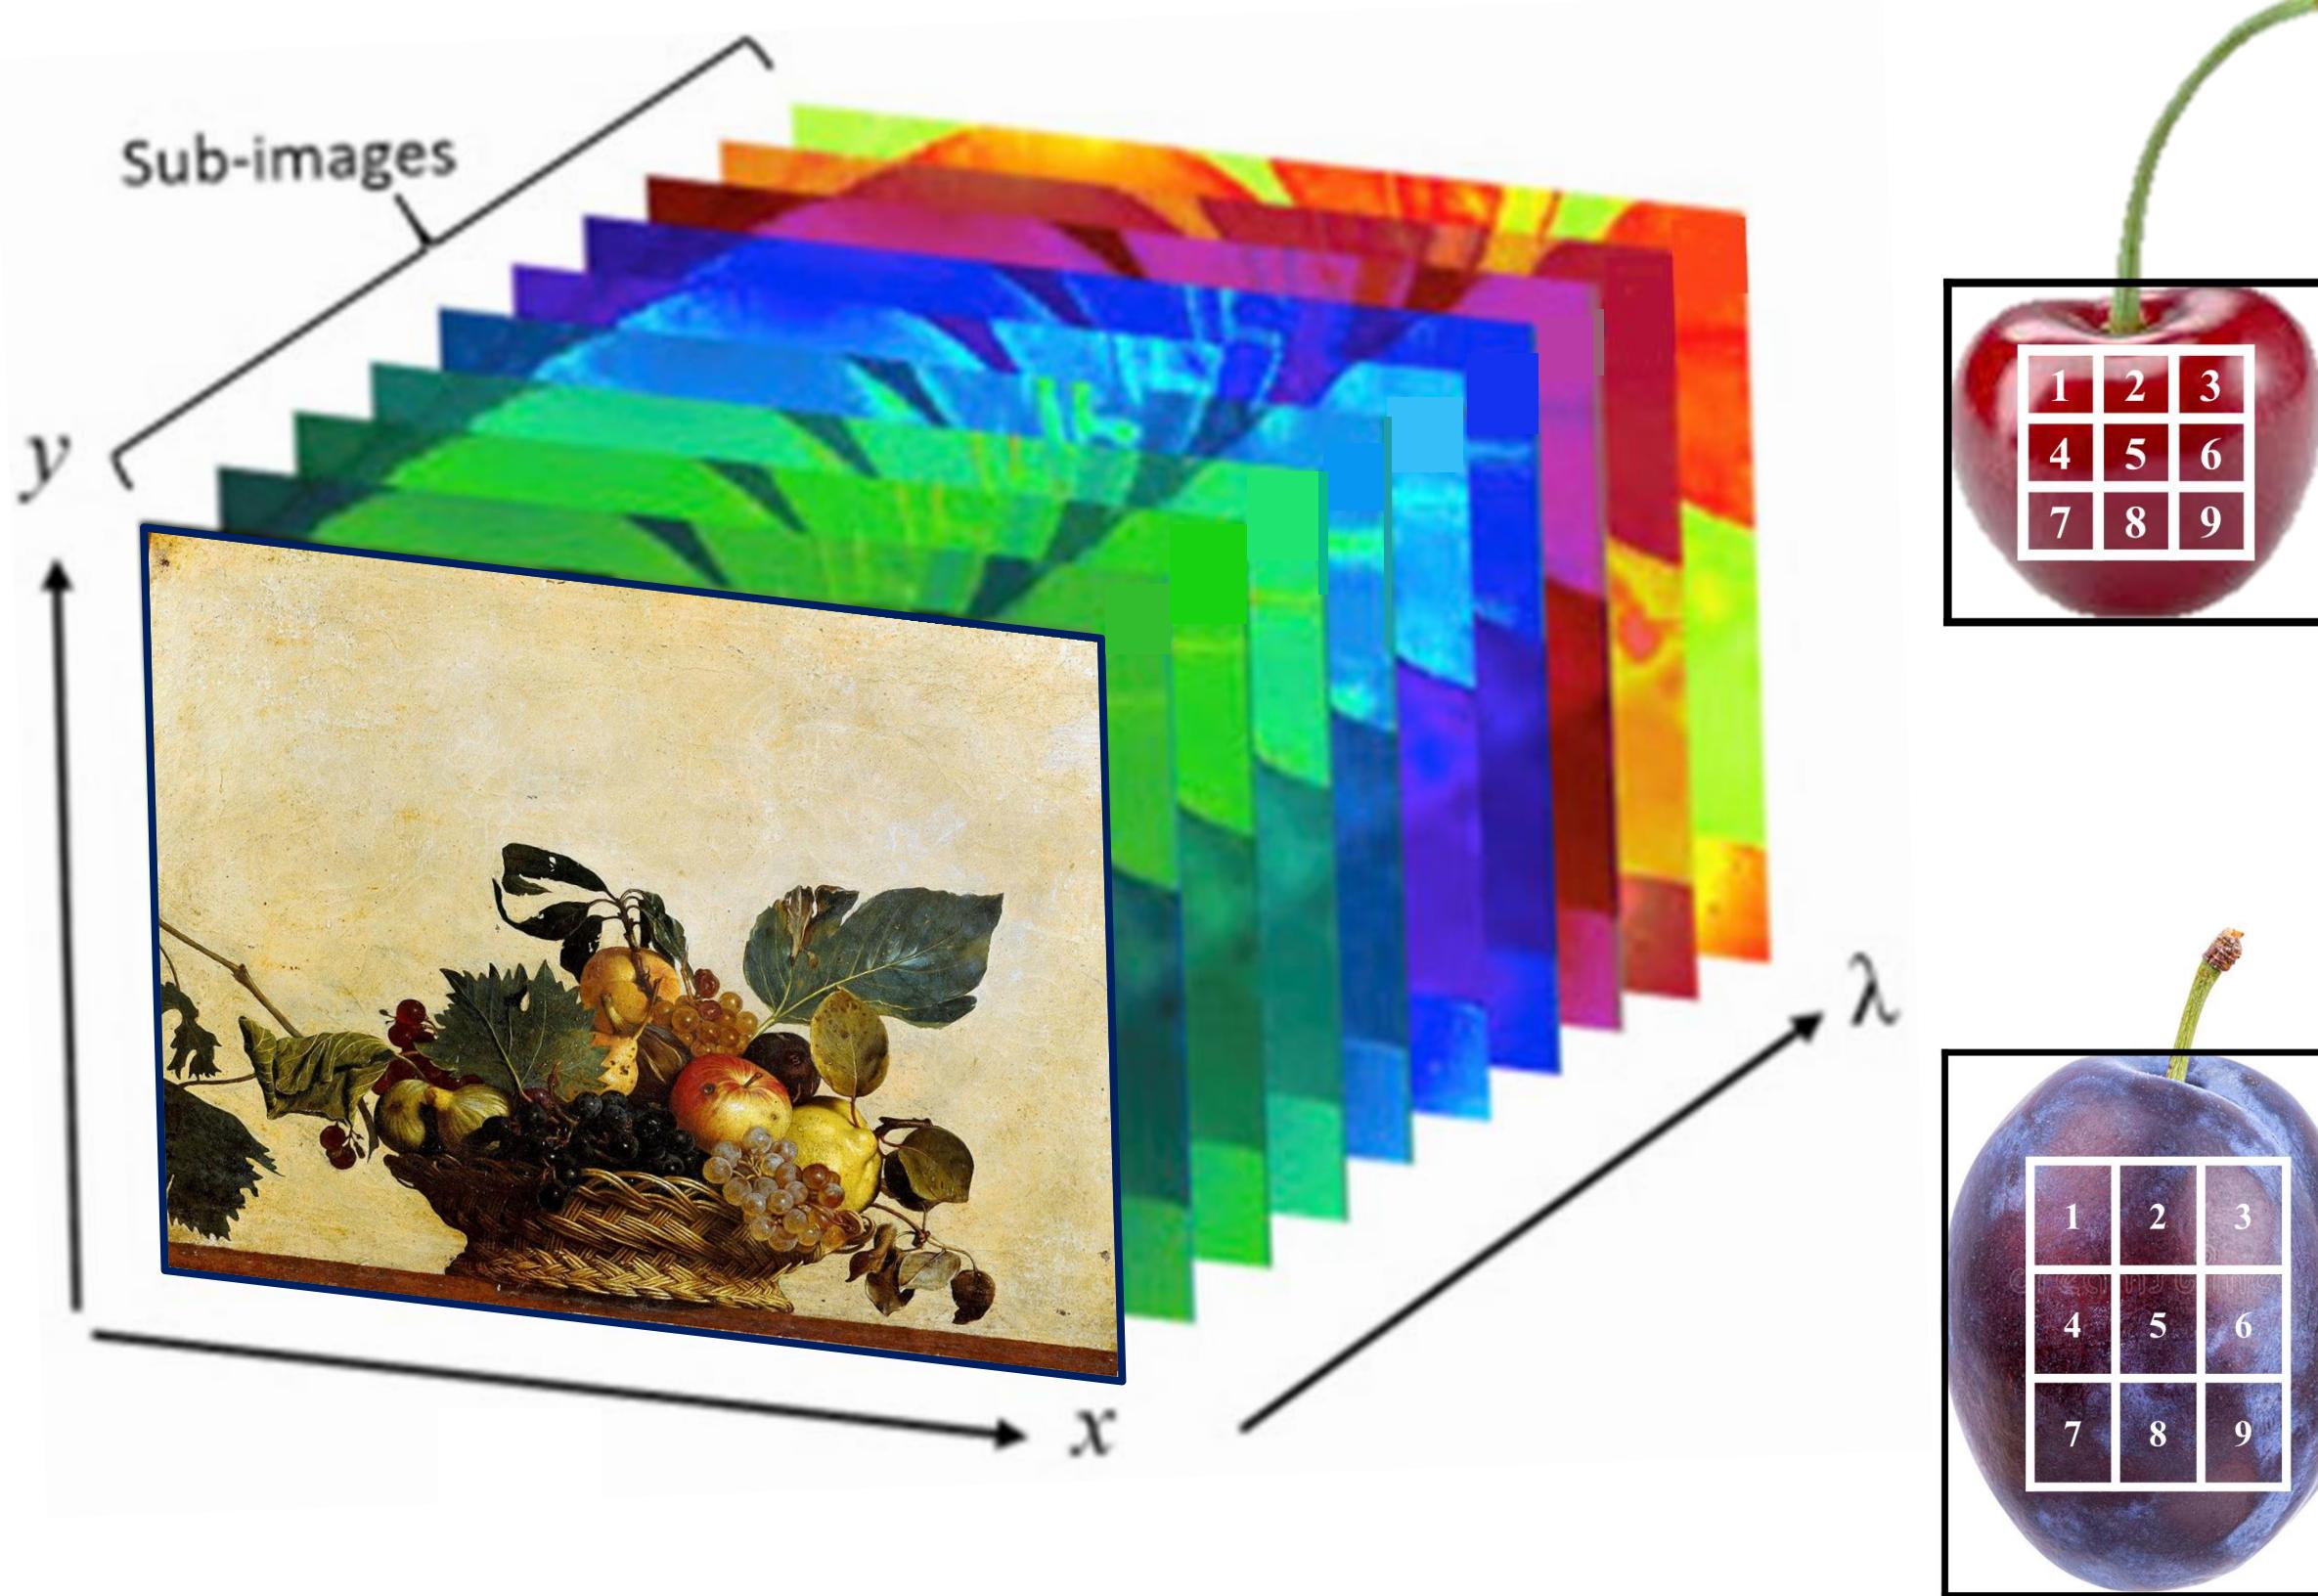

- ✓ Recording spectra pixel by pixel
- ✓ Surface and spectral information
- ✓ Measurement result: “**hypercube**”

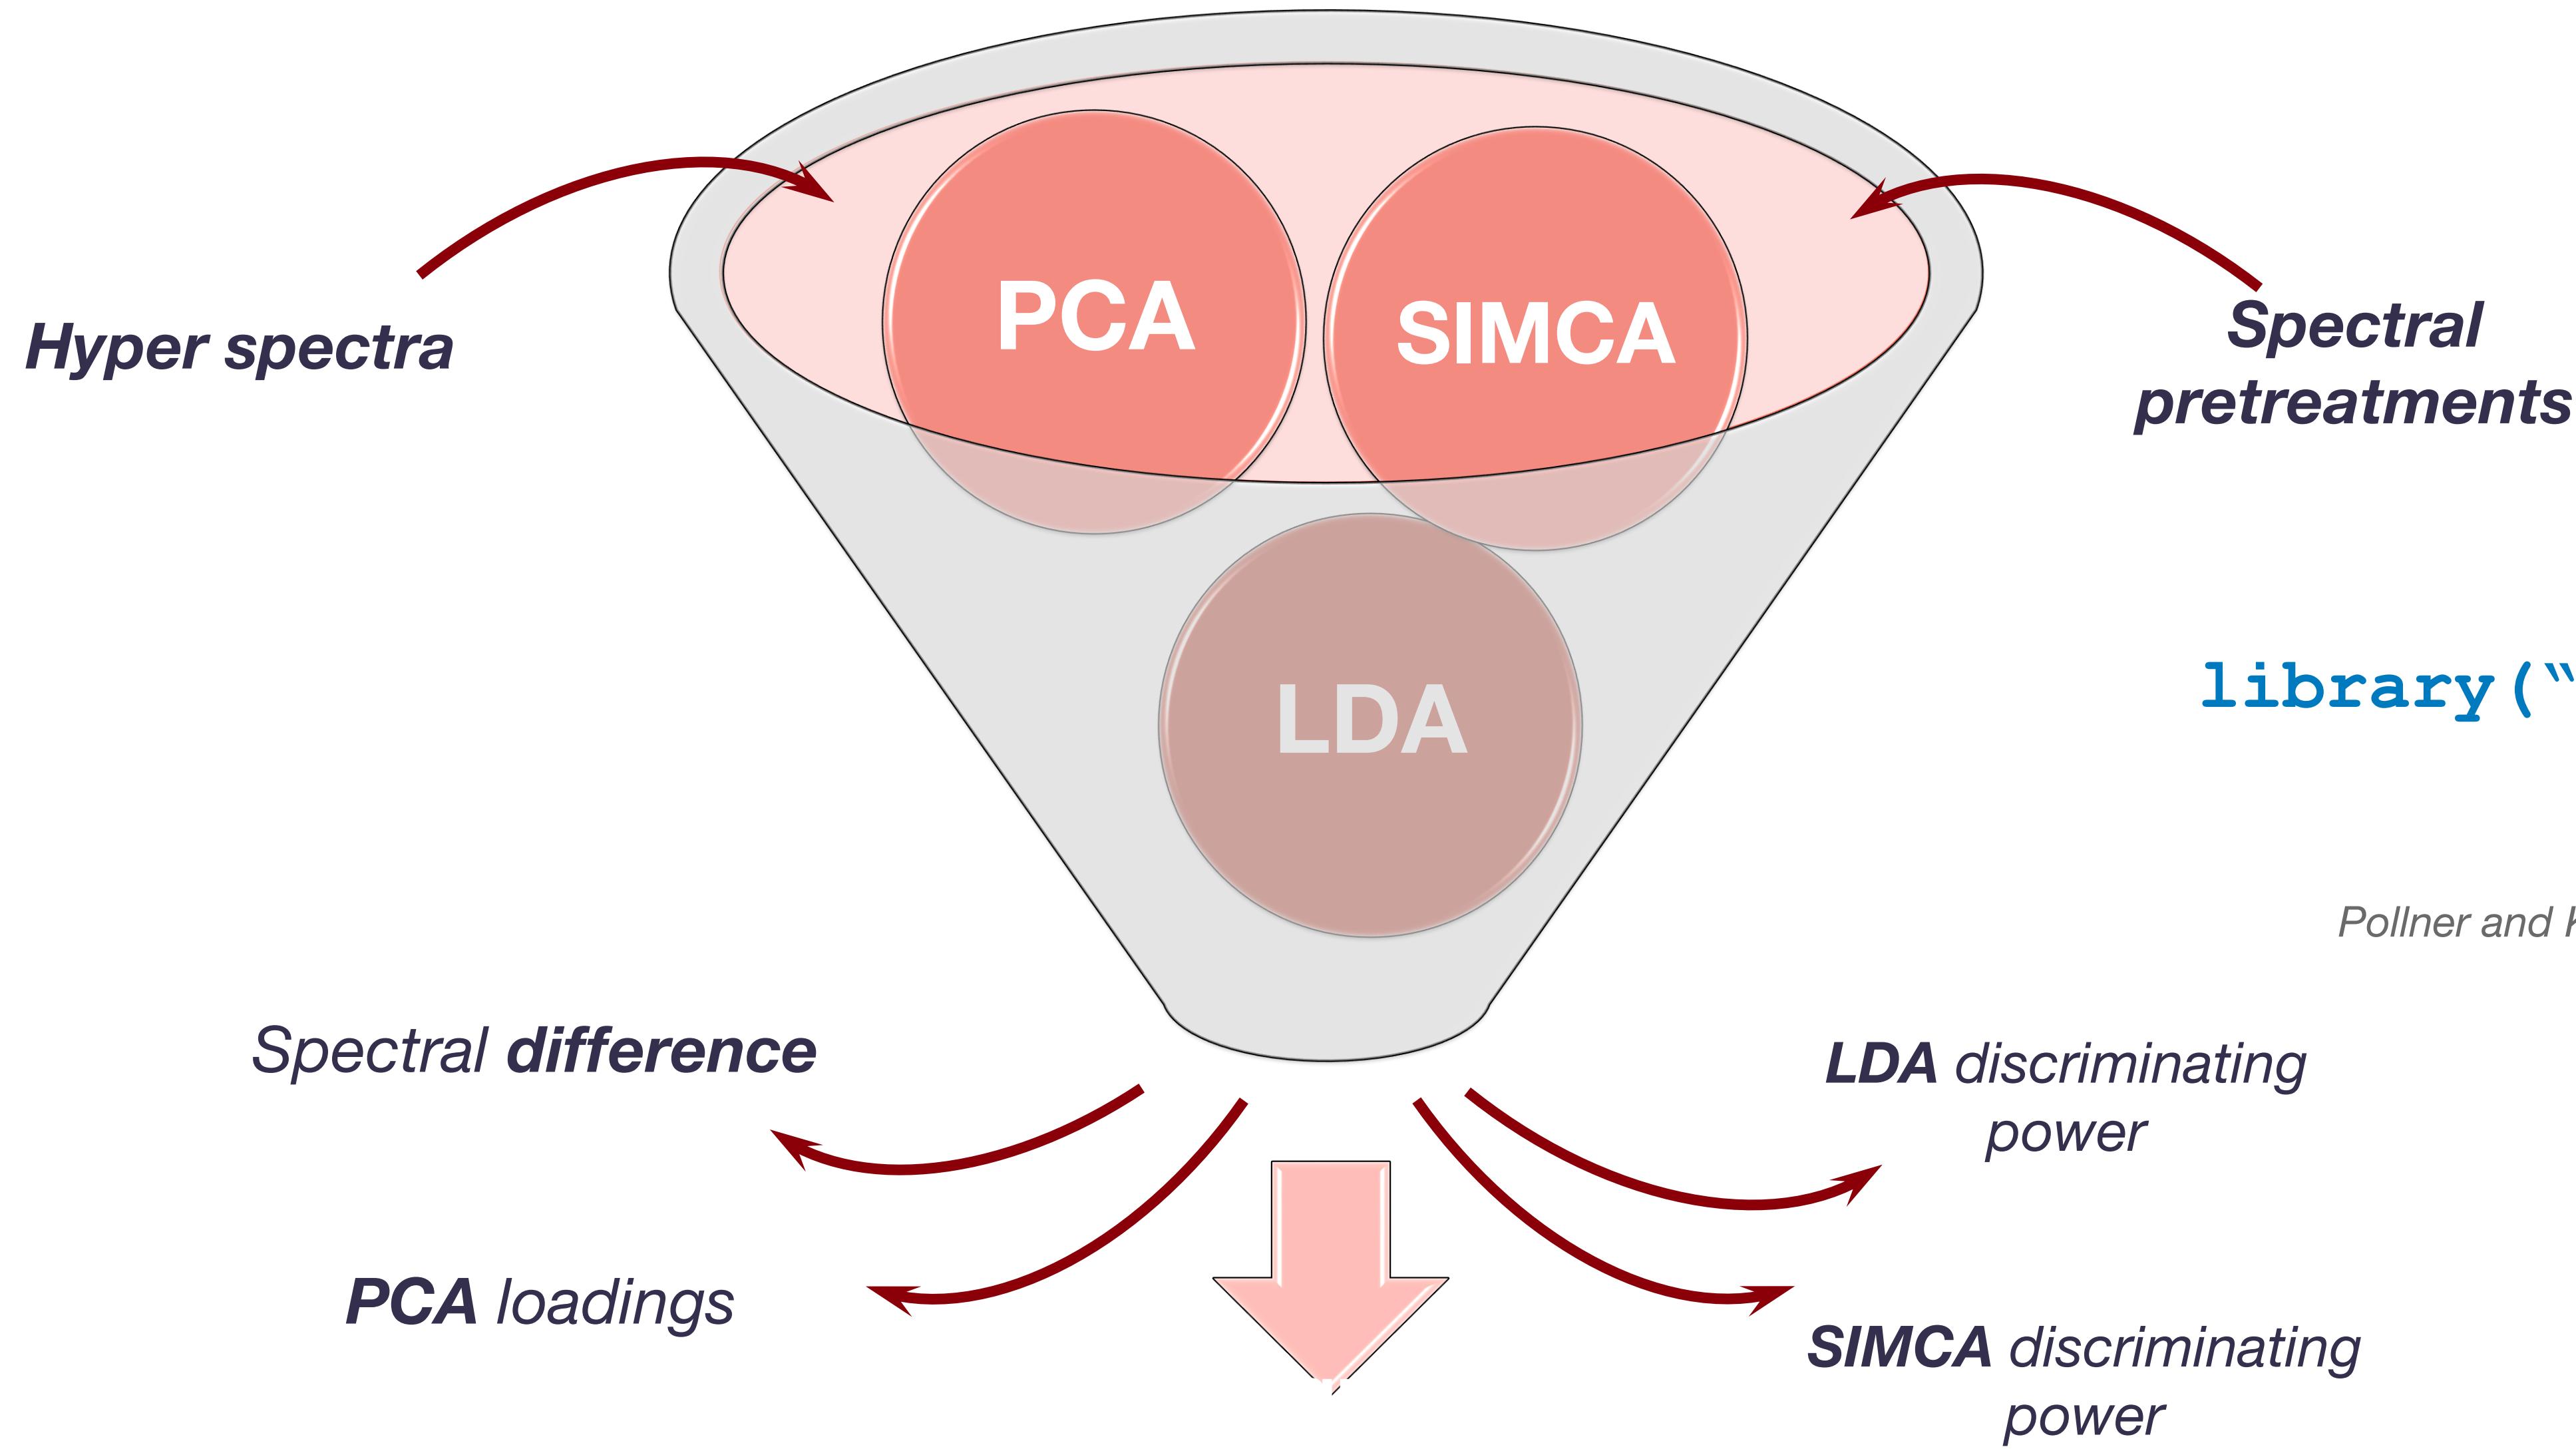

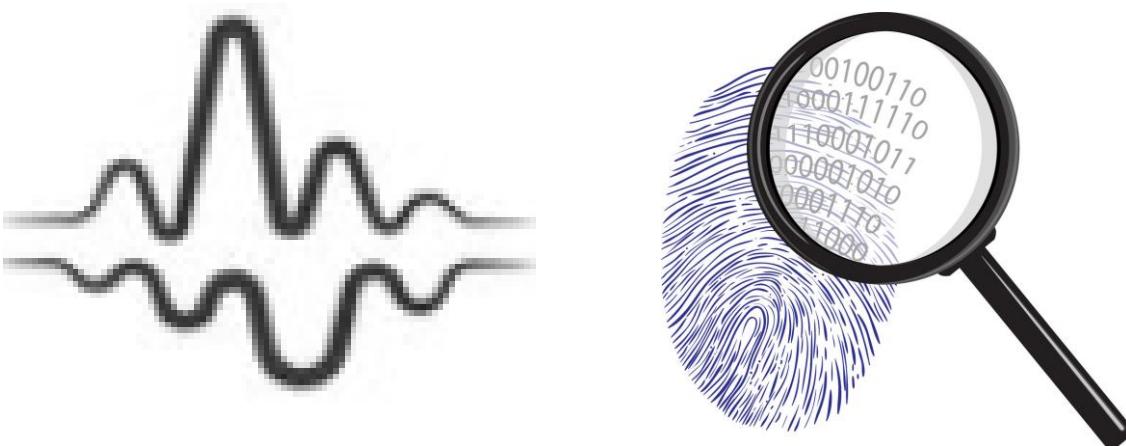

Fingerprint methods II. Hyperspectral imaging

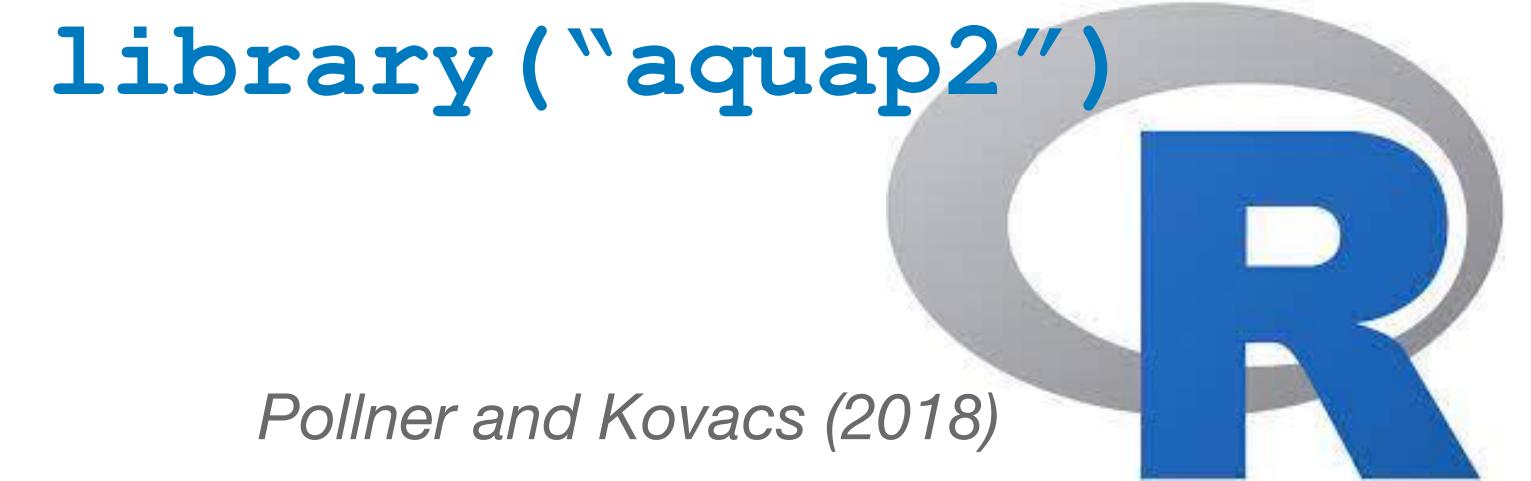

Image segmentation

Chemometric analyses

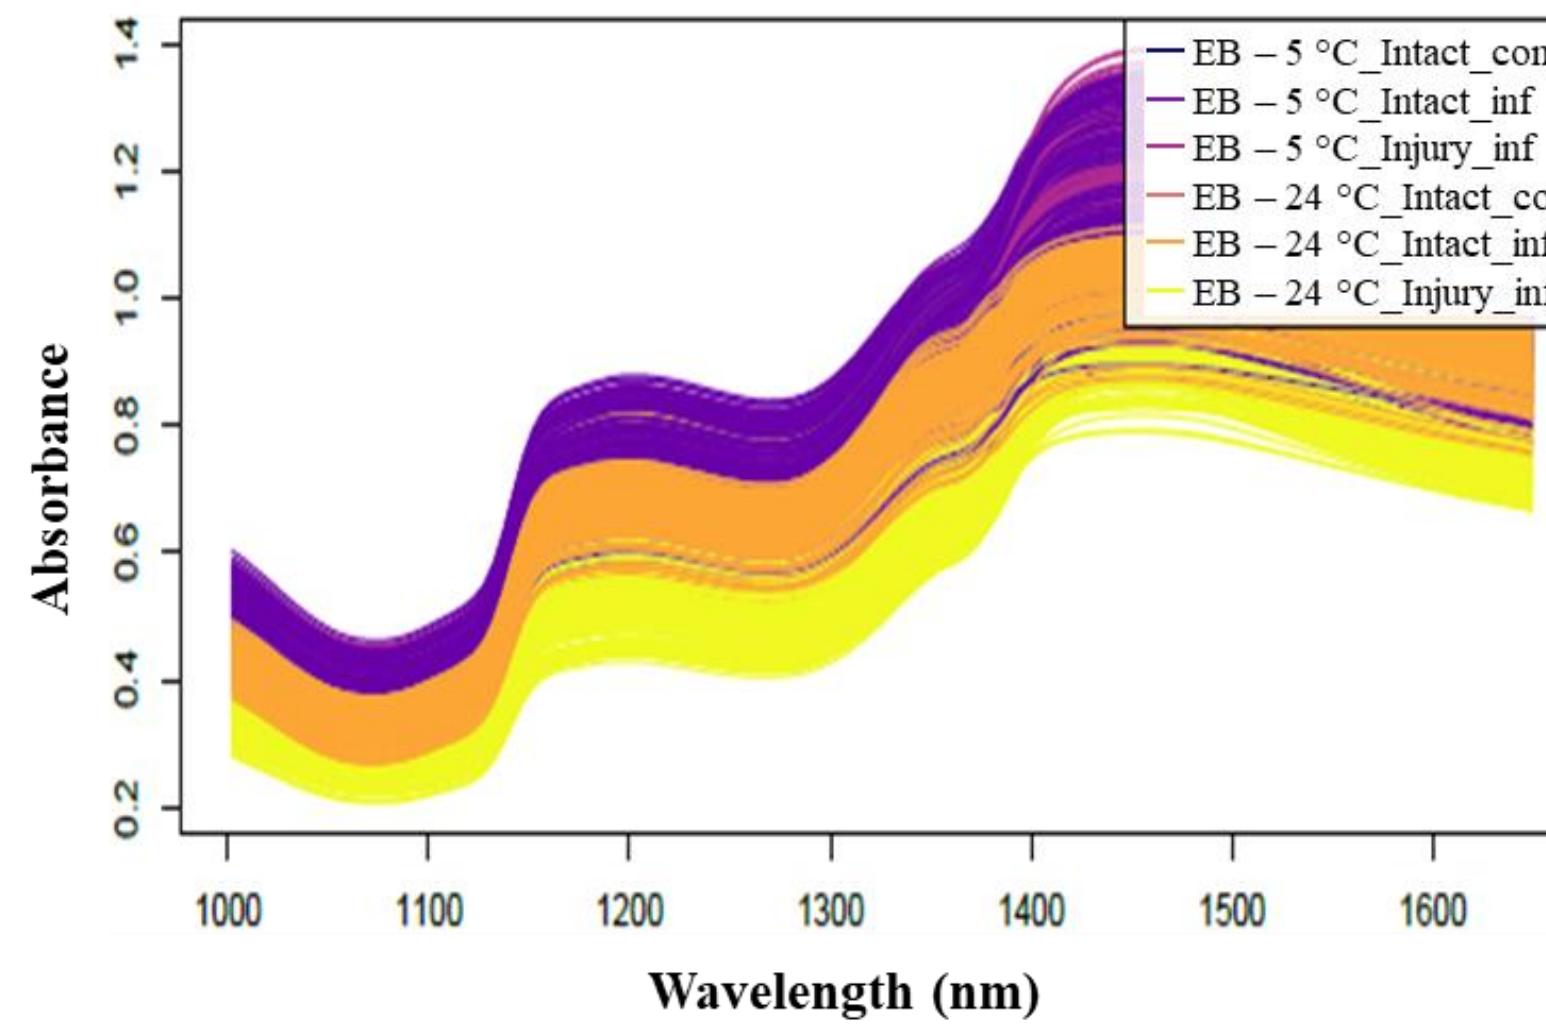

- Savitzy-Golay smoothing
- Scatter correction,
- Detrending,
- 1st derivatives
- 2nd derivatives

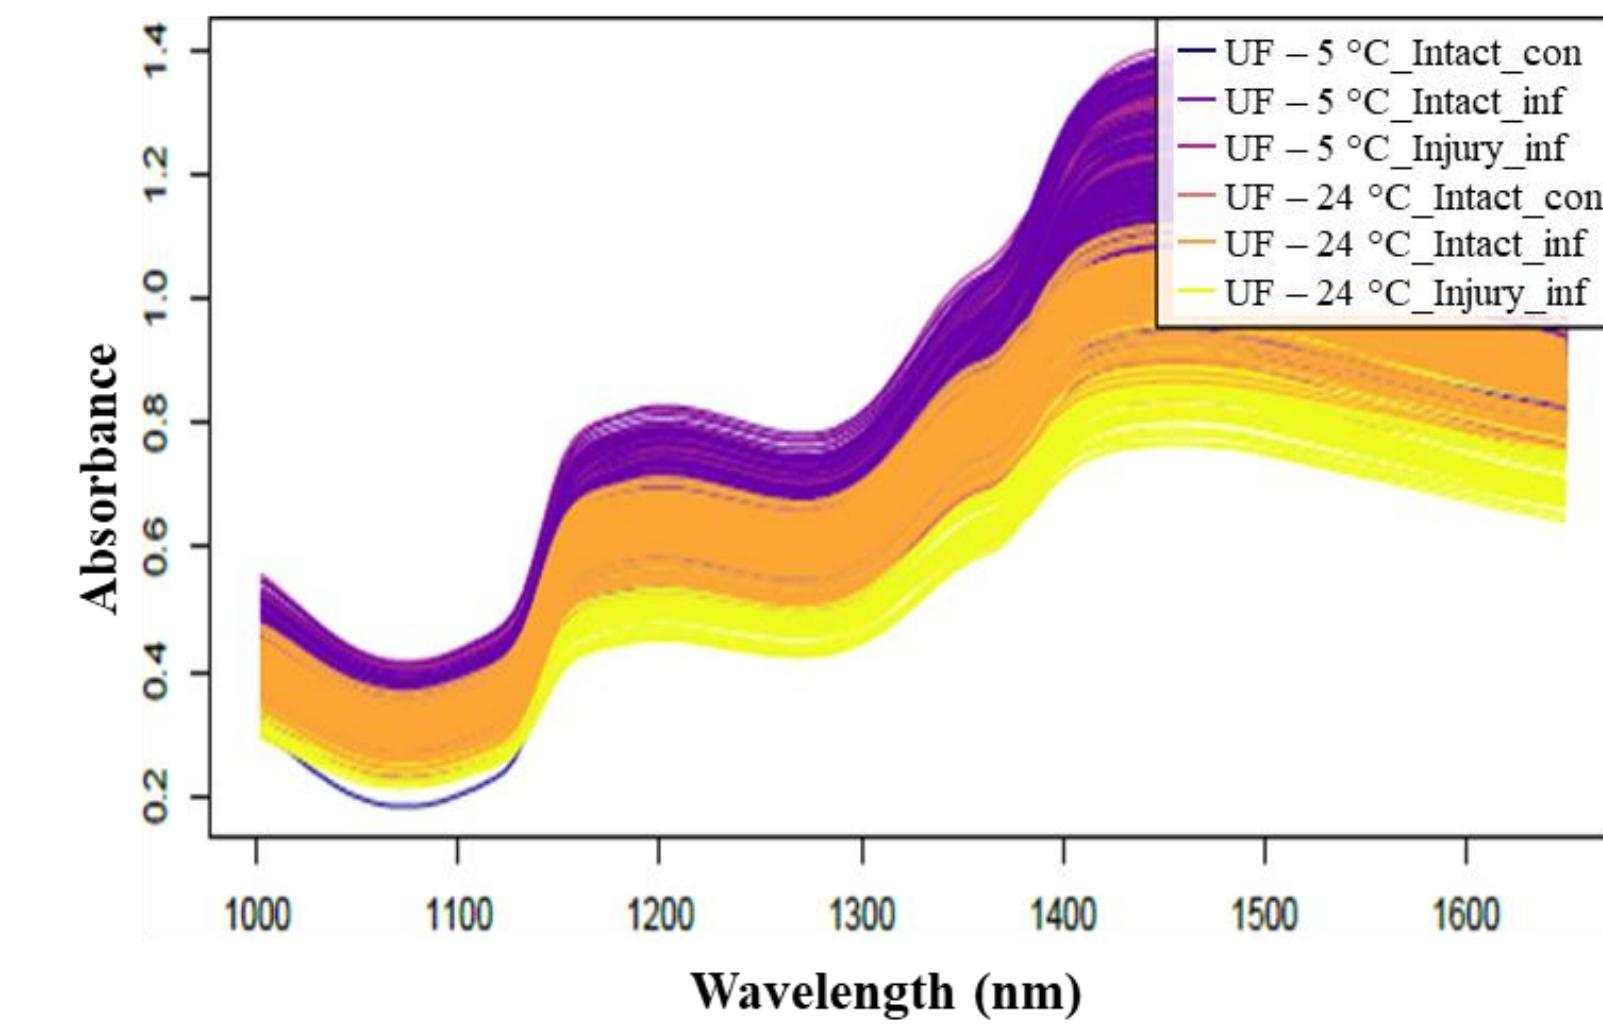

Fingerprint methods II. Hyperspectral imaging

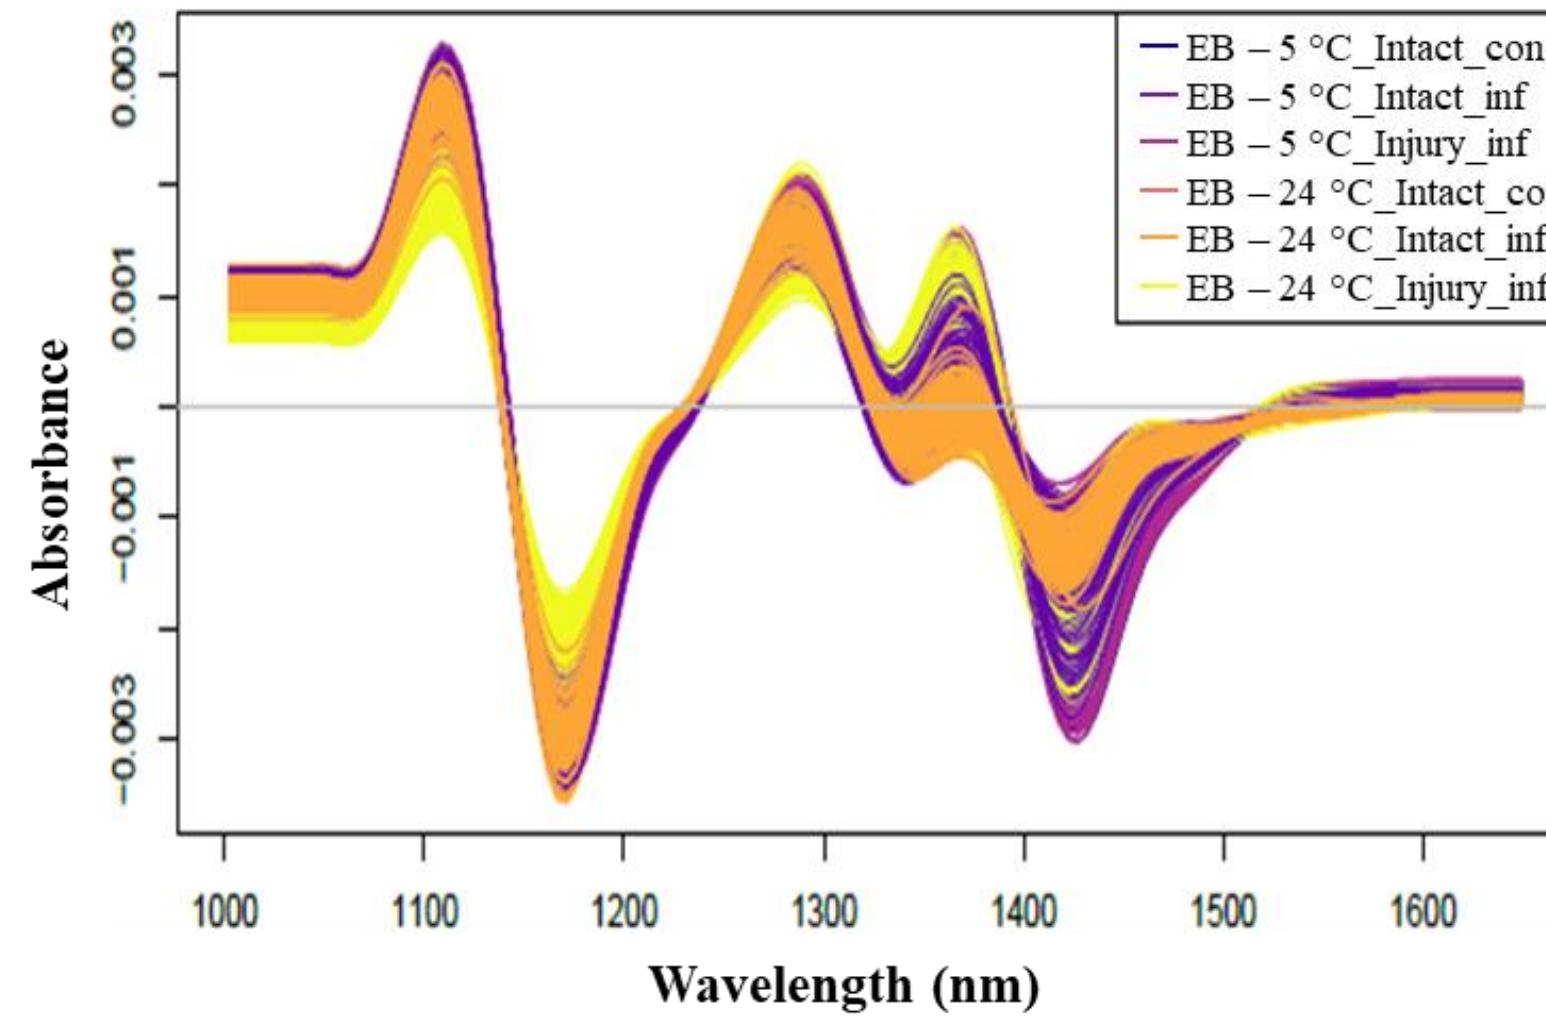

Raw spectra

Concluding remarks

Thanks to digitalisation and miniaturisation, field and extreme investigations can be carried out.

Building massive databases required to build robust chemometric models!

Optimum harvest ripeness can be determined!

Post harvest losses can be reduced!

Fast and efficient intervention can be implemented!

Our developments are in line with the Digital Agri-Food Strategy!
