

Semivisible Jets from Dark Glueballs

Zofia Borowska, Imperial College London

July 2024, University of Glasgow

Supervised by Deepak Kar and Andy Buckley

Dark Glueballs Model

“Dark Sector Glueballs at the LHC”

(Batz, Cohen, Curtin, Gemmell, Kribs. [arXiv:2310.13731](https://arxiv.org/abs/2310.13731))

SU(N) gauge group

Pure-glue model with infinite dark colours

Higgs and Z' portals

Implemented a glueball hadronization model
based on Lund string dynamics

Glueball	Mass (m_0)	Higgs Portal
0 ⁺⁺	1.00	$h^* \rightarrow \text{SM}, \text{SM}$
2 ⁺⁺	1.40	$0^{++} + h^*$
0 ⁻⁺	1.50	-
1 ⁺⁻	1.75	-
2 ⁻⁺	1.78	$0^{-+} + h^*$
3 ⁺⁻	2.11	$1^{+-} + h^*$
3 ⁺⁺	2.15	$\{2^{++}, 0^{-+}, 2^{-+}\} + h^*$
1 ⁻⁻	2.25	$1^{+-} + h^*$
2 ⁻⁻	2.35	$\{1^{+-}, 3^{+-}, 1^{--}\} + h^*$
3 ⁻⁻	2.46	$\{1^{+-}, 3^{+-}, 1^{--}, 2^{--}\} + h^*$
2 ⁺⁻	2.48	$\{1^{+-}, 3^{+-}, 1^{--}, 2^{--}, 3^{--}\} + h^*$
0 ⁺⁻	2.80	$\{1^{--}, 3^{--}, 2^{+-}\} + h^*$

(taken from “DS Glueballs...”)

Higgs Portal Event Generation

Added decay channels for all dark glueball species

Branching ratios and lifetimes based on dimension-6 Higgs

(Juknevich. [arXiv:0911.5616](https://arxiv.org/abs/0911.5616))

HiddenGlue Pythia8 module for dark glueball hadronization into species

Decay channel	Branching ratio
$0^{++} \rightarrow b\bar{b}$	0.326
$0^{++} \rightarrow c\bar{c}$	0.269
$0^{++} \rightarrow gg$	0.247
$0^{++} \rightarrow \tau'^-\tau'^-$	0.155
$0^{++} \rightarrow \mu^-\mu^-, s\bar{s}, \gamma\gamma$	0.003

Pythia8 settings

```
HiddenValley:FSR          = on
HiddenValley:alphaOrder    = 1
HiddenValley:nFlav         = 0
HiddenValley:fragment      = on

HiddenGlue:fragmentationFunction = 2
HiddenGlue:m0                  = 10.
HiddenGlue:pTminFactor        = 1.8
HiddenGlue:fragmentationFunction = 2
HiddenGlue:aBeta                = 90.
HiddenGlue:kBeta                = 810

HiddenValley:aLund            = 0.00019
HiddenValley:bmqv2             = 0.26
```

Z' Portal Event Generation

Generated SM $p \ p > Z' > g \ g \ g$ [QCD]
in MadGraph5 using “SM + W’ and Z’ at NLO
in QCD” model

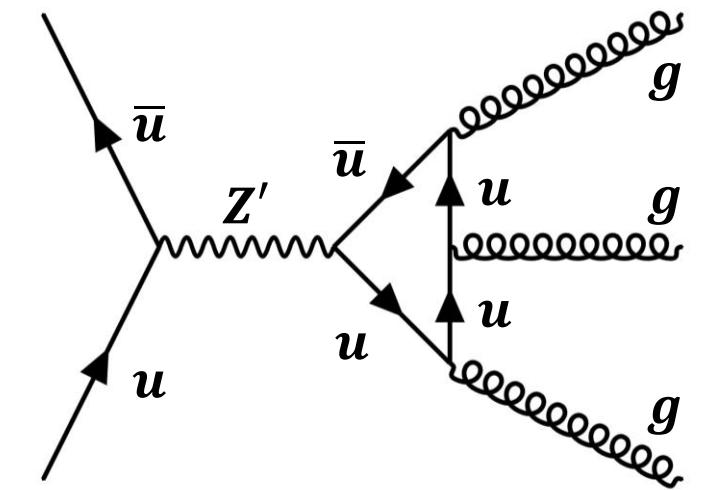

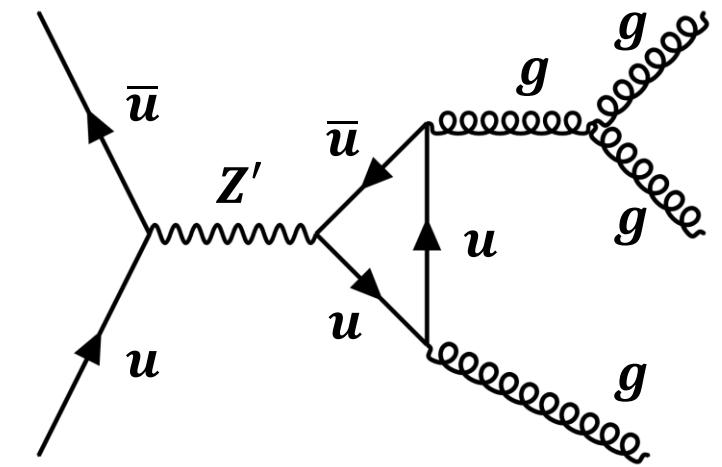

(Fuks, Ruiz. [arXiv:1701.05263](https://arxiv.org/abs/1701.05263))

Issue #1: MG5 colour flow not conserved in
a loop-induced process

([Bug report](#))

Issue #2: Pythia HiddenValley dark colour
reassignment

$2p \rightarrow Z' \rightarrow 3g$

Higgs Portal Analysis

Anti- kt jets radius = 0.4

Transverse momenta $p_T > 30 \text{ GeV}$

Visible final states with pseudorapidity
 $|\eta| < 4.5$

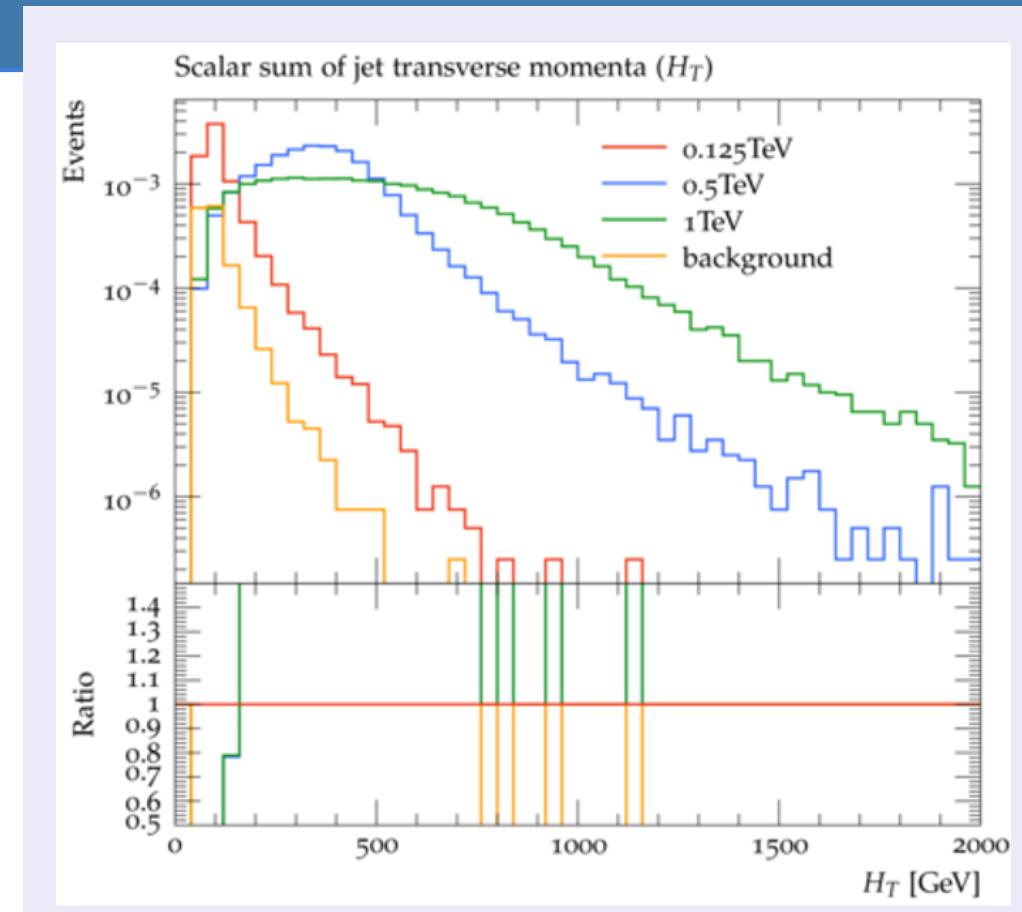

Smeared in Rivet

Background: SM QCD dijet

Normalisation: weighted sum of events

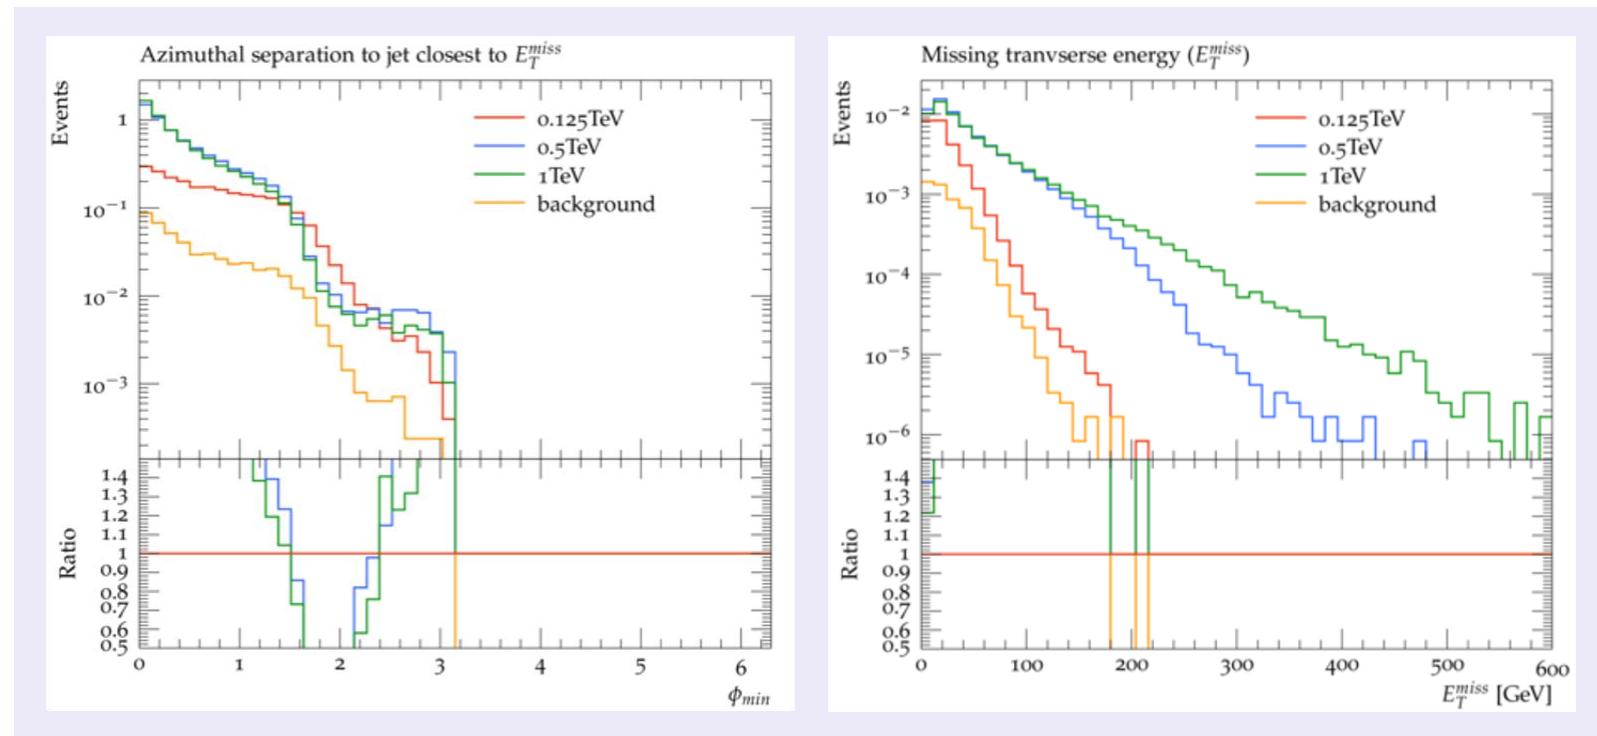

Boosted Higgs mass to 1 TeV

→ decrease in cross-section from 10^{-6} to 10^{-9} pb

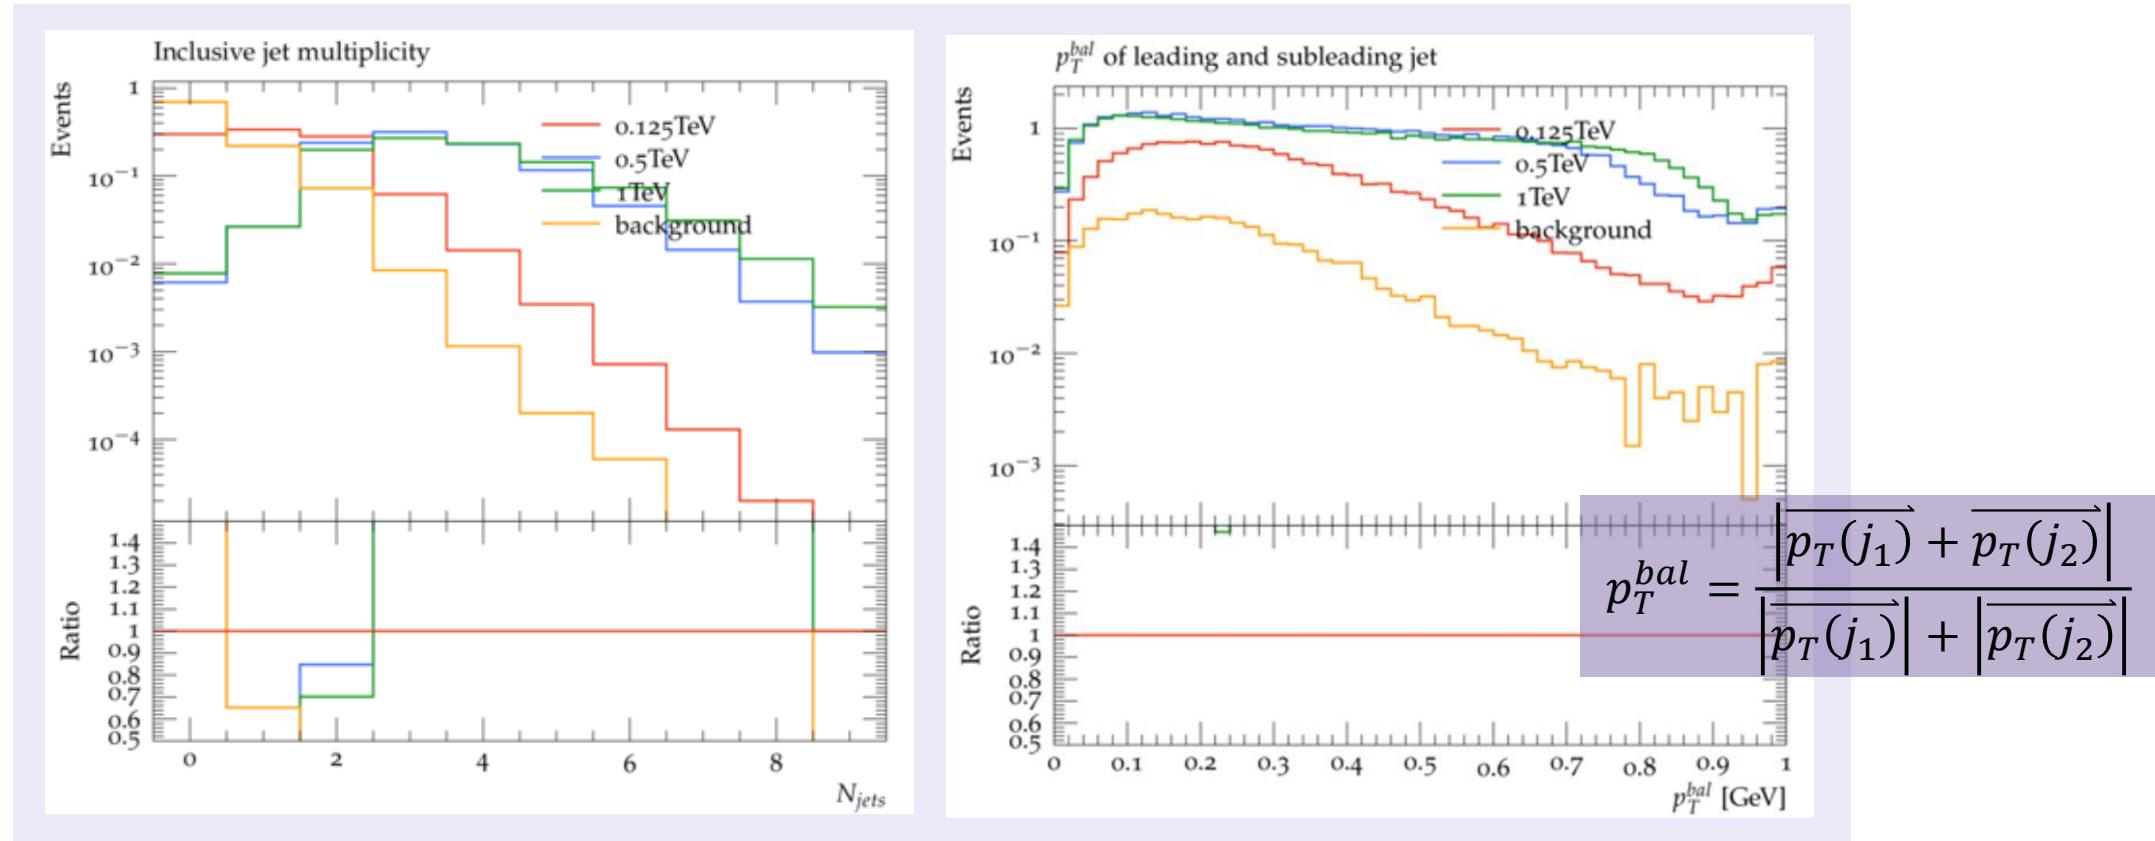

Semivisible Jet Signature: ϕ_{min}, E_T^{miss}

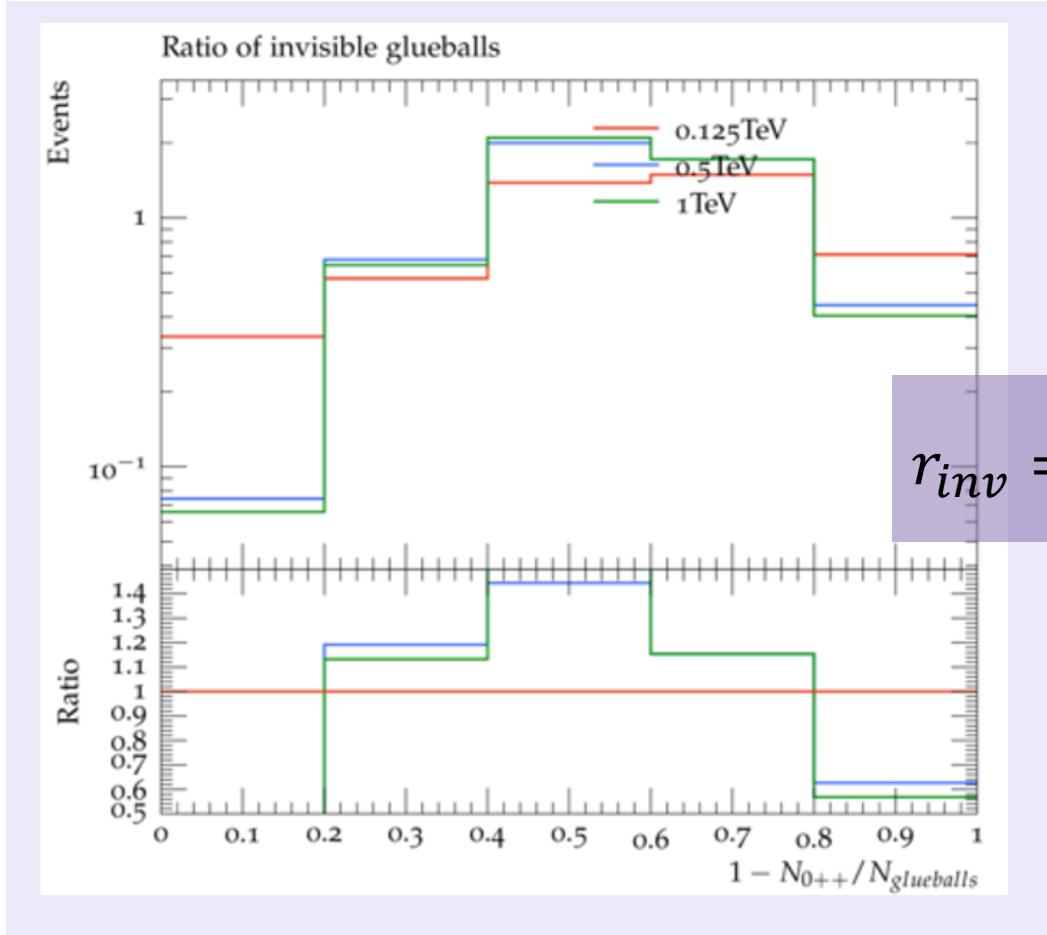

Alignment of MET and jet indicating SVJ but because of low MET (< 600 GeV), signature not excluded by SVJ search ([EXOT-2022-37](#))

SVJ Observables: N_{jets} , p_T^{bal}

SVJ Observables: r_{inv}

$$r_{inv} = 1 - \frac{\text{number of } 0^{++} \text{ glueballs}}{\text{number of all glueballs}}$$

Constraining Parameter Space

Reinterpretation:

- ATLAS SUSY ([SUSY-2018-22](#)) and SVJ ([EXOT-2022-37](#)) – not sensitive to our signal
- ATLAS Mono-jet ([STDM-2018-55](#)) – has some sensitivity to our signal but minimal due to the low cross-section
- Artificially boosted cross-section to 10^6 pb (increase by order 15)

Z' more promising? → can boost energy without sacrificing cross-section

Thank you!

wrong color assignment for loop-induced process

Bug #2073272 reported by  Olivier Mattelaer on 2024-07-16

This bug affects 1 person

10

Affects	Status	Importance	Assigned to	Milestone
 MadGraph5_aMC@NLO	New	Undecided	 Olivier Mattelaer	

Bug Description

In loop-induced event, the color can be incorrectly assigned to an event:

```
<event>
  6 0 0.5076118E-002 0.8388664E+02 0.7546771E-02 0.1318370E+00

```

<mgrwt>

This is for

p p > z > 3g [noborn=QCD]

(first event in the G4_1 directory).

One can see that color is consistent with a Z decaying with the last two gluon, but the momenta are consistent with the first two gluon coming from the z.

Checking further inside G4 and deactivating the channel symmetry (from G5 and G6):

G4 still has the issue

G5 does not have any Z written (which can just be an unlucky seed)

G6 has the issue too.

So does not seem to be related to a configuration symmetry handling.

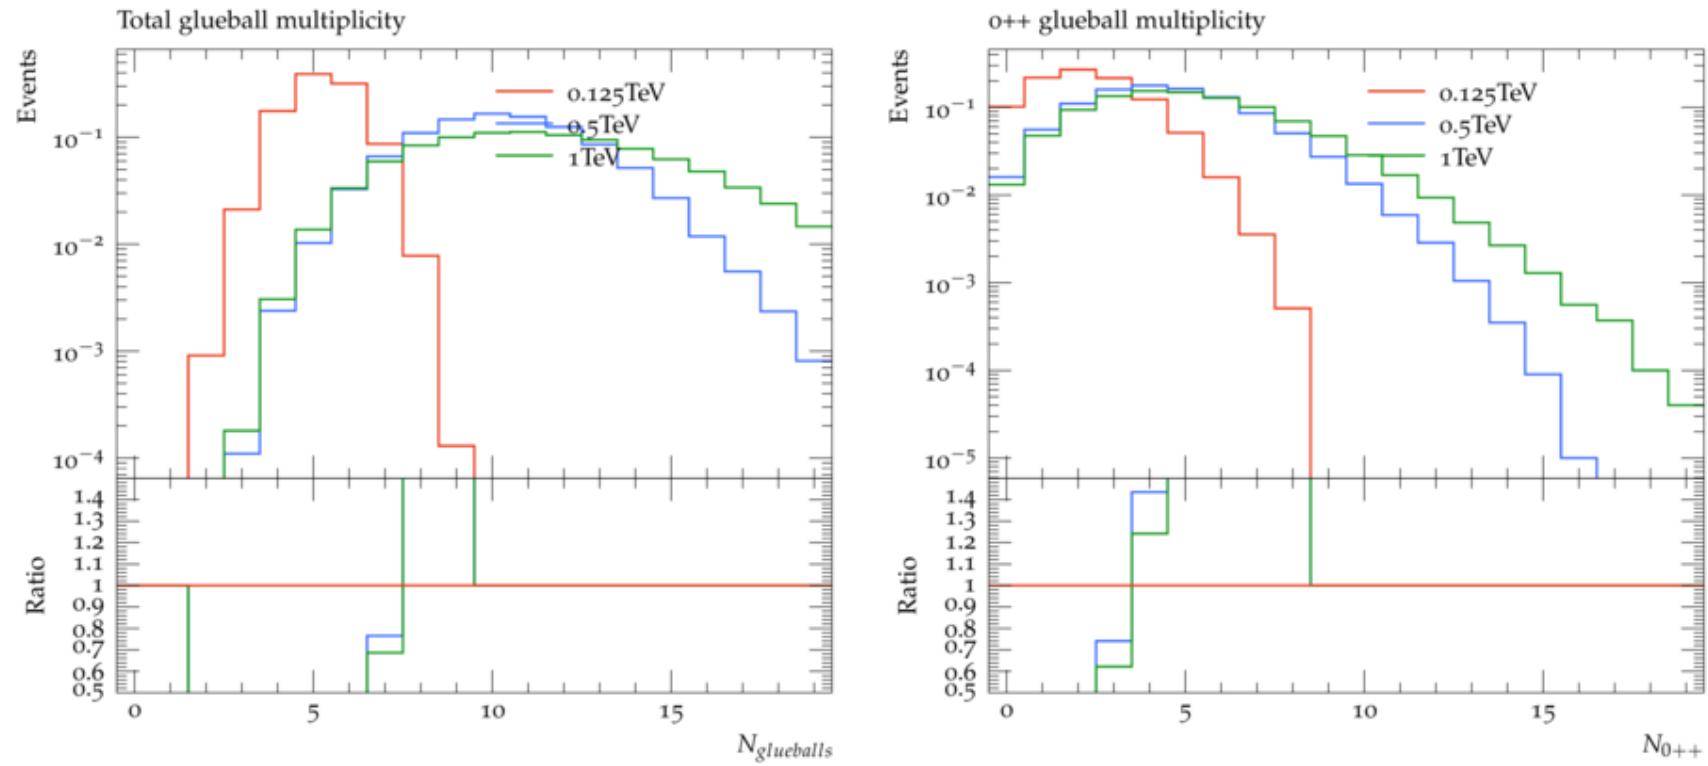

More on Lifetimes

Last column: lifetimes in mm/c
