

Discussions/Clarifications on technical subjects:

Balance between in-House products and industrial products?

...are we going the same way as for current transformers?

'Emittance' measurements predominantly profile measurements.

High gamma beams plus hard x-rays should make it possible to measure

'simply' the photon beam divergence (certainly ILC/CLIC with gamma larger than  $10^6$ )

Modelisations available for multibunch instabilities for different modes?

-> could yield different requirements for gain-bandwidth product of kicker

Beam based alignment of Quadrupoles/Sextupoles

## Feedback for future workshop(s):

- Workshop vs conference
- Parallel sessions vs non-parallel sessions
- Topical workshops vs 'community workshops'
- Workshop dinner vs 2 x 'Happy Hours'
- Standard length presentations vs '15 mins of fame'?
- Sponsorship of more PhD students for attendance
- Review/teaching talks by 'oldies'
