AR

Dear all,

Some background in advance of Monday's meeting, because talking with Lucie last week made me realise that not everyone is necessarily following the wider LC developments.

For a quick introduction to the "Linear Collider Vision" (which is supposed to provide a counterbalance to the FCC in the European Strategy), you could look at the slides in the last European LC meeting:  
<https://agenda.linearcollider.org/event/10479/>

and also Jenny wrote about it in last week's newswire:  
<https://newswire.linearcollider.org/2024/11/29/introducing-a-global-linear-collider-vision/>

From this LCvision initiative, one large document will cover the physics case and long-term vision of a linear collider facility (LCF) (non-site-specific); this is being coordinated by Roman. There will be a separate document on a LCF at CERN coordinated by Steinar.

These are in addition to the individual project inputs, where from CLIC there will be a Readiness Report (including a brief section from us on physics motivation) that will also be distilled into a 10-page formal strategy input.

Separately, those in this group have also discussed doing a minimal update of the previous 10-page CLICdp physics case input for resubmission.

Thanks,  
Aidan
