# Hadronic Showers in Geant4 **11.3.ref00**

G. Folger, D. Konstantinov, A. Ribon  
CERN EP-SFT

# Fixed reproducibility violation

- In 11.3.cand01, found one reproducibility violation in QGSP\_BIC\_HP\_EMZ
  - Rare, seen in 11.3.cand01 for the first time, but present in Geant4 since version 10.2
  - In the class `G4UAtomicDeexcitation`, there is a `std::vector<int> vacancyArray` which, in rare cases, can keep memory of previous events, therefore breaking reproducibility.
    - The problem arises in the method `G4UAtomicDeexcitation::GenerateParticles` when there is an early exit by the condition:  
`if ( Z < 6 || Z > 104 ) return;`  
and the solution is to clear the vector at the beginning of the method (or, equivalently, in the above if-statement, before returning)
  - The fix was included in 11.3 a few days before the release.  
It should be applied to patches of previous versions as well, in particular 11.1 and 11.2

*Note : during this debugging, done together with Mihaly, we have realised that in QGSP\_BIC\_HP instead of EM Opt0, the EM Opt4 (\_EMZ) is silently and confusingly forced !  
This was introduced in Geant4 10.5, in the following 3 physics lists:  
QGSP\_BIC\_HP , QGSP\_BIC\_HPT , QGSP\_BIC\_AllHP*

# Pion- showers:

G4 11.3 FTFP\_BERT

G4 11.2.p02 FTFP\_BERT

G4 11.3 QGSP\_BERT

G4 11.2.p02 QGSP\_BERT

*Note : conventional Birks treatment  
(easier and no experimental h/e to fit !)*

# Energy Response

Energy response | Beam: pi- | Target: TileCal

Energy response | Beam: pi- | Target: AtlasHEC

Energy response | Beam: pi- | Target: AtlasFCAL

Energy response | Beam: pi- | Target: AtlasECAL

11.2.p02.cand00 FTFP\_BERT

11.2.p02.cand00 QGSP\_BERT

11.3.cand01 FTFP\_BERT

11.3.cand01 QGSP\_BERT

11.2.p02.cand00 FTFP\_BERT

11.2.p02.cand00 QGSP\_BERT

11.2.p02.cand00.FTFP.BERT  
11.3.cand01.FTFP.BERT

11.2.p02.cand00.QGSP.BERT  
11.3.cand01.QGSP.BERT

# Hadronic showers

- For nearly all physics lists, hadronic showers in G4 **11.3** have
  - ~ 1-2% higher energy response and
  - ~ 5% narrower lateral showersthan those of G4 11.2
- Due to the improvement in the angular emission of  $\geq 4$  bodies in BERT, reducing the differences between this model and FTFP
- QGSP\_BERT showers with respect to FTFP\_BERT ones in G4 11.3 :
  - ~ 1-2% higher energy response
  - ~ **10% wider (*i.e.* less optimistic) energy resolution**
  - ~ 5% longer showers
  - ~ 4% narrower showers
