

HEPVis: A Julia Package for Visualization and Comparative Analysis of High Energy Physics Data

Thursday 31 July 2025 09:00 (15 minutes)

HEPVis, a Julia package, provides easy-to-use functions for visualizing and comparing High Energy Physics (HEP) data. Designed to handle and manage plotting information for a large number of variables, it streamlines modifications through a user-friendly YAML file. It also includes functionality to compare datasets using various methods such as ratio, pull, and difference.
